

UK Labour Market, May 2015

Coverage: **UK**

Date: **13 May 2015**

Geographical Area: **UK**

Theme: **Labour Market**

Main points for January to March 2015

- Comparing the estimates for January to March 2015 with those for October to December 2014, employment continued to rise and unemployment continued to fall. These changes maintain the general direction of movement since late 2011 to early 2012.
- There were 31.10 million people in work, 202,000 more than for October to December 2014 and 564,000 more than for a year earlier.
- The proportion of people aged from 16 to 64 in work (the employment rate) was 73.5%, the highest since comparable records began in 1971.
- There were 1.83 million unemployed people. This was 35,000 fewer than for October to December 2014, the smallest quarterly fall since June to August 2013. Comparing January to March 2015 with a year earlier, there were 386,000 fewer unemployed people.
- The proportion of the economically active population who were unemployed (the unemployment rate) was 5.5%, lower than for October to December 2014 (5.7%) and for a year earlier (6.8%). The economically active population is those in work plus those seeking and available to work.
- There were 8.98 million people aged from 16 to 64 who were out of work and not seeking or available to work (known as economically inactive), 69,000 fewer than for October to December 2014 but little changed compared with a year earlier.
- The proportion of people aged from 16 to 64 who were economically inactive (the inactivity rate) was 22.1%, lower than for October to December 2014 (22.3%) but unchanged compared with a year earlier.
- Comparing January to March 2015 with a year earlier, pay for employees in Great Britain increased by 1.9% including bonuses and by 2.2% excluding bonuses.

(i) Summary of latest labour market statistics

Table A shows the latest estimates, for January to March 2015, for employment, unemployment and economic inactivity and shows how these estimates compare with the previous quarter (October to December 2014) and the previous year (January to March 2014). Comparing January to March 2015 with October to December 2014 provides the most robust short-term comparison. See **Making comparisons with earlier data** at Section (ii).

Table A: Summary of latest labour market statistics for January to March 2015, seasonally adjusted

	Number (thousands)	Change on Oct to Dec 2014	Change on Jan to Mar 2014	Headline Rate (%)	Change on Oct to Dec 2014	Change on Jan to Mar 2014
Employed	31,098	202	564			
Aged 16 to 64	29,902	133	468	73.5	0.3	1.0
Aged 65+	1,196	69	96			
Unemployed	1,827	-35	-386	5.5	-0.1	-1.2
Aged 16 to 64	1,805	-39	-381			
Aged 65+	22	4	-5			
Inactive	18,933	-83	157			
Aged 16 to 64	8,983	-69	5	22.1	-0.2	0.0
Aged 65+	9,950	-14	153			

Table source: Office for National Statistics

Table notes:

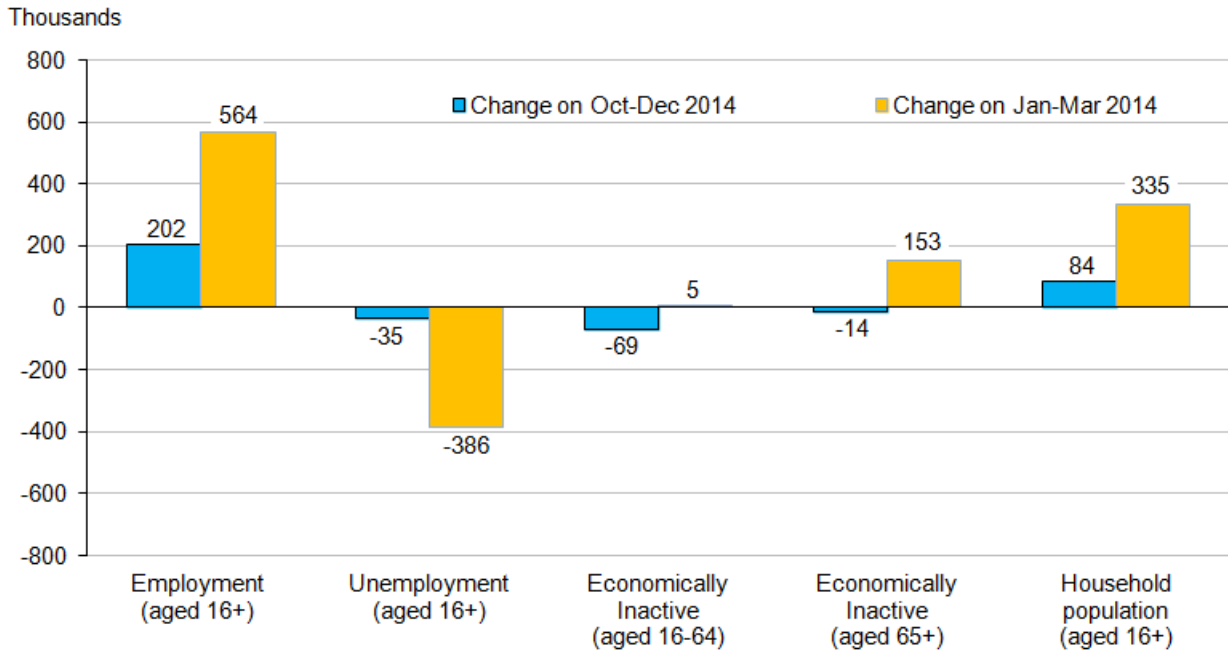

- Calculation of headline employment rate:** Number of employed people aged from 16 to 64 divided by the population aged from 16 to 64. Population is the sum of employed plus unemployed plus inactive.
- Calculation of headline unemployment rate:** Number of unemployed people aged 16 and over divided by the sum of employed people aged 16 and over plus unemployed people aged 16 and over.
- Calculation of headline economic inactivity rate:** Number of economically inactive people aged from 16 to 64 divided by the population aged from 16 to 64. Population is the sum of employed plus unemployed plus inactive.
- Components may not sum exactly to totals due to rounding.

(ii) Understanding and working with labour market statistics

Where to find explanatory information

[Explaining the concepts of employment, unemployment and economic inactivity](#) is available on our website as a short video.

[Interpreting labour market statistics](#), available on our website, is designed to help users interpret labour market statistics and highlight some common misunderstandings.

A more detailed [Guide to labour market statistics](#), which expands on “Interpreting labour market statistics” is also available.

A [Glossary](#) which gives an explanation of terms used within labour market statistics, is available on our website.

About labour market statuses

Everybody aged 16 or over is either [employed](#), [unemployed](#) or [economically inactive](#). The employment estimates include all people in work including those working part-time. People not working are classed as unemployed if they have been looking for work within the last 4 weeks and are able to start work within the next 2 weeks. A common misconception is that the unemployment statistics are a count of people on benefits; this is not the case as they include unemployed people not claiming benefits.

Jobless people who have not been looking for work within the last 4 weeks or who are unable to start work within the next 2 weeks are classed as economically inactive. Examples of economically inactive people include people not looking for work because they are students, looking after the family or home, because of illness or disability or because they have retired.

Making comparisons with earlier data derived from the Labour Force Survey

Estimates of employment, unemployment, economic inactivity, hours worked and redundancies are derived from the Labour Force Survey (LFS), a survey of households. The most robust estimates of short-term movements in these estimates are obtained by comparing the estimates for January to March 2015 with the estimates for October to December 2014, which were first published on 18 February 2015. This provides a more robust estimate than comparing with the estimates for the 3 months to February 2015. This is because the January and February data are included within both estimates, so effectively observed differences are those between the individual months of December 2014 and March 2015. The LFS is sampled such that it is representative of the UK population over a 3 month period, not for single month periods.

Accuracy and reliability of survey estimates

Most of the figures in this statistical bulletin come from surveys of households or businesses. Surveys gather information from a sample rather than from the whole population. The sample is designed carefully to allow for this, and to be as accurate as possible given practical limitations such as time and cost constraints, but results from sample surveys are always estimates, not precise

figures. This means that they are subject to a margin of error which can have an impact on how changes in the numbers should be interpreted, especially in the short-term.

Changes in the numbers reported in this statistical bulletin (and especially the rates) between three month periods are usually not greater than the margin of error. In practice, this means that small, short-term movements in reported rates (for example within +/- 0.3 percentage points) should be treated as indicative, and considered alongside medium and long-term patterns in the series and corresponding movements in administrative sources, where available, to give a fuller picture.

Further information is available towards the end of this statistical bulletin in the section **Accuracy of the statistics: estimating and reporting uncertainty**.

Seasonal adjustment

All estimates discussed in this statistical bulletin are seasonally adjusted except where otherwise stated. Like many economic indicators, the labour market is affected by factors that tend to occur at around the same time every year; for example school leavers entering the labour market in July and whether Easter falls in March or April. In order to compare movements other than annual changes in labour market statistics, such as since the previous quarter or since the previous month, the data are seasonally adjusted to remove the effects of seasonal factors and the arrangement of the calendar.

(iii) Detailed commentary

This section of the statistical bulletin consists of the following parts.

People in work

1. Employment
2. Public and private sector employment
3. Employment by nationality and country of birth
4. Actual hours worked
5. Workforce jobs
6. Average weekly earnings
7. Labour disputes

People not in work

8. Unemployment
9. Claimant Count
10. Comparison between unemployment and the Claimant Count
11. Economic inactivity

Other labour market statistics

12. Young people in the labour market
13. Redundancies
14. Vacancies
15. Main out of work benefits

1. Employment

What is employment ?

[Employment](#) measures the number of people in work and differs from the number of jobs because some people have more than one job. Further information is available at **Notes for Employment** at the end of this section.

[Explaining the concepts of employment, unemployment and economic inactivity](#) is available on our website as a short video.

A [comparison between estimates of employment and jobs](#) is available in an article on our website.

Where to find data about employment

Employment estimates are available at Tables 1 and 3 of the pdf version of this statistical bulletin and at [data tables A02 \(1.47 Mb Excel sheet\)](#) and [EMP01 \(1.39 Mb Excel sheet\)](#).

Estimates for the number of people in employment back to 1855 and for the number of self-employed people back to 1950 (which do not have National Statistics status) have been published by the Bank of England in the spreadsheet [Three centuries of macroeconomic data](#) (at columns H and L in worksheet 19).

Where to find more information about employment

An article looking at [self-employed workers in the UK](#) was published on 20 August 2014.

Commentary

The proportion of people aged from 16 to 64 in work is known as the employment rate. Figure 1.1 shows the employment rate for people aged from 16 to 64 since comparable records began in 1971. The lowest employment rate was 65.6% in 1983, during the economic downturn of the early 1980s. The employment rate has been generally increasing since early 2012 and for the latest time period, January to March 2015, it reached a record high of 73.5%.

Figure 1.1: Employment rate (aged 16 to 64) from 1971, seasonally adjusted

Source: Labour Force Survey - Office for National Statistics

Download chart

[XLS](#) [XLS format](#)
(59 Kb)

Figure 1.2 looks in more detail at the employment rate for the last 5 years.

Figure 1.2: Employment rate (aged 16 to 64), seasonally adjusted

Source: Labour Force Survey - Office for National Statistics

Download chart

[XLS](#) [XLS format](#)

(32.5 Kb)

73.5% of people aged from 16 to 64 were in work for January to March 2015. This was:

- higher than for October to December 2014 (73.2%)
- higher than for a year earlier (72.5%)
- higher than the pre-downturn peak recorded for early 2008 (73.0%)
- the highest employment rate since comparable records began in 1971

Looking at employment rates by sex, for January to March 2015:

- 78.4% of men and 68.6% of women aged from 16 to 64 were in work
- these employment rates for men and women were higher than those for October to December 2014 and for a year earlier
- the employment rate for men (78.4%) was lower than before the economic downturn of 2008 to 2009, when it peaked at 79.1% in late 2007 to early 2008
- the employment rate for women (68.6%) was the joint highest since comparable records began in 1971, partly due to ongoing changes to the state pension age for women resulting in fewer women retiring between the ages of 60 and 65

For January to March 2015, there were 31.10 million people in work, 202,000 more than for October to December 2014 and 564,000 more than for a year earlier.

Comparing the estimates for full-time and part-time employment by sex for January to March 2015 with those for a year earlier, the number of:

- men working full-time increased by 293,000 to reach 14.38 million
- men working part-time was little changed at 2.19 million
- women working full-time increased by 162,000 to reach 8.35 million
- women working part-time increased by 111,000 to reach 6.18 million

Figure 1.3: Changes in people in employment between January to March 2014 and January to March 2015, seasonally adjusted

Source: Labour Force Survey - Office for National Statistics

Download chart

[XLS](#) [XLS format](#)

(25 Kb)

Comparing the estimates for type of employment for January to March 2015 with those for a year earlier, the number of:

- employees increased by 655,000 to reach 26.37 million
- self-employed people fell by 67,000 to reach 4.50 million
- unpaid family workers was little changed at 119,000 (see Note 2 for an explanation of the coverage of this series)
- people on government supported training and employment programmes fell by 17,000 to reach 105,000 (see Note 3 for an explanation of the coverage of this series)

Notes for Employment

1. Employment consists of employees, self-employed people, unpaid family workers and people on government supported training and employment programmes.
2. Unpaid family workers are people who work in a family business who do not receive a formal wage or salary but benefit from the profits of that business.
3. The government supported training and employment programmes series does not include all people on these programmes; it only includes people engaging in any form of work, work experience or work-related training who are not included in the employees or self-employed series. People on these programmes NOT engaging in any form of work, work experience or work-related training are not included in the employment estimates; they are classified as unemployed or economically inactive.

2. Public and private sector employment (first published on 18 March 2015)

What is public and private sector employment ?

[Public sector employment](#) measures the number of people in paid work in the public sector. The public sector comprises central government, local government and public corporations. Estimates of public sector employment are obtained from information provided by public sector organisations.

[Private sector employment](#) is estimated as the difference between total employment, sourced from the Labour Force Survey, and public sector employment.

Where to find data about public and private sector employment

Public and private sector employment estimates are available at Tables 4 and 4(1) of the pdf version of this statistical bulletin and at [data tables EMP02 \(47 Kb Excel sheet\)](#) and [EMP03 \(40.5 Kb Excel sheet\)](#).

Further information on public sector employment is available in the [Public sector employment release](#).

Commentary

There were 5.40 million people employed in the public sector for December 2014. This was 6,000 fewer than for September 2014 and the lowest figure since comparable records began in 1999.

There were 25.54 million people employed in the private sector for December 2014, 149,000 more than for September 2014.

Between December 2013 and December 2014, the number of people employed in the public sector fell by 140,000 and the number of people employed in the private sector increased by 757,000. These annual movements in public and private sector employment were partly due to the reclassification of Lloyds Banking Group plc which moved from the public sector to the private sector in March 2014. Excluding the effects of this reclassification, public sector employment fell by 42,000

and private sector employment increased by 659,000 between December 2013 and December 2014.

For December 2014, 82.6% of people in employment worked in the private sector and the remaining 17.4% worked in the public sector.

Figure 2.1 shows public sector employment as a percentage of all people in employment for the last five years.

Figure 2.1: Public sector employment as a percentage of total employment, seasonally adjusted

Source: Quarterly Public Sector Employment Survey - Office for National Statistics

Download chart

[XLS](#) [XLS format](#)
(27 Kb)

The number of people employed in the public sector has been generally falling since March 2010. Quarterly estimates of public and private sector employment are available back to 1999. Comparisons of public and private sector employment over time are complicated by a number of changes to the composition of these sectors over this period with several large employers moving between the public and private sectors. We therefore publish estimates of public and private sector employment excluding the effects of major reclassifications alongside estimates of total public and private sector employment at Table 4 of the pdf version of this statistical bulletin and at [data table EMP02 \(47 Kb Excel sheet\)](#).

3. Employment by nationality and country of birth, not seasonally adjusted

What is employment by nationality and country of birth ?

The estimates of employment by both nationality and country of birth relate to the number of people in employment rather than the number of jobs. Changes in the series therefore show net changes in the number of people in employment, not the proportion of new jobs that have been filled by UK and non-UK workers. These estimates should not be used as a proxy for flows of foreign migrants into the UK.

The estimates are not seasonally adjusted and it is therefore best practice to compare the estimates for January to March 2015 with those for a year earlier rather than with those for October to December 2014.

Where to find data about employment by nationality and country of birth

Estimates of employment by nationality and country of birth are available at Table 8 of the pdf version of this statistical bulletin and at [data table EMP06 \(184.5 Kb Excel sheet\)](#).

Commentary

Looking at the estimates by nationality, between January to March 2014 and January to March 2015, the number of:

- UK nationals working in the UK increased by 279,000 to reach 27.91 million
- non-UK nationals working in the UK increased by 294,000 to reach 3.09 million

Looking at changes in non-UK nationals working in the UK between January to March 1997 (when comparable records began) and January to March 2015:

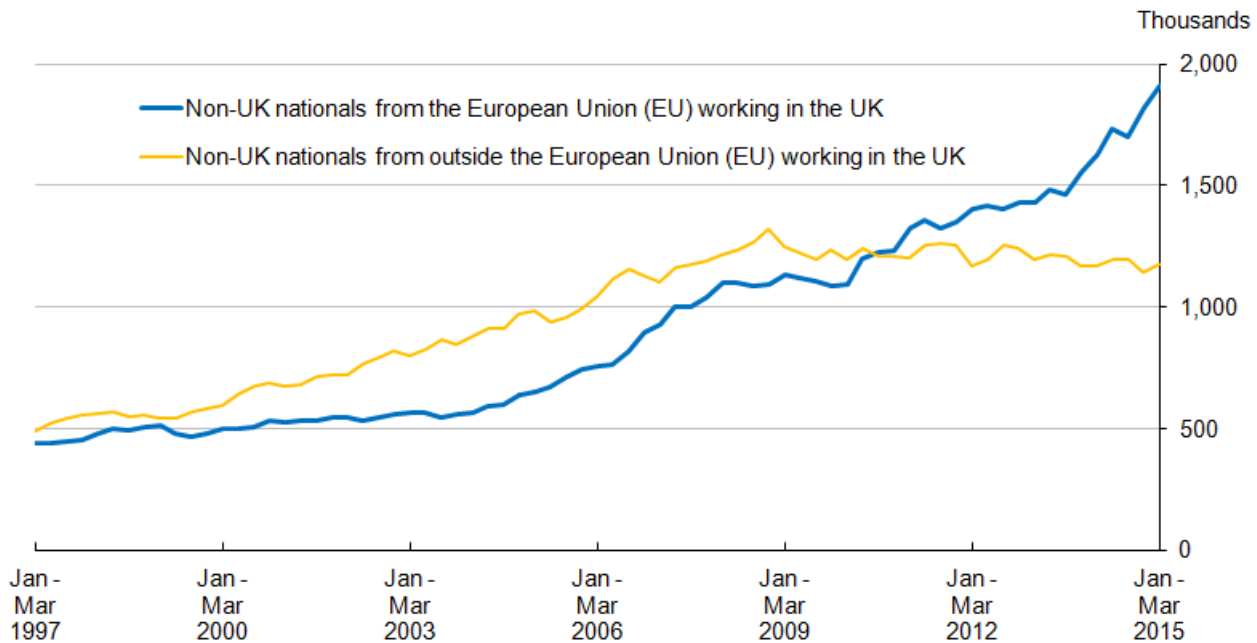

- the number of non-UK nationals working in the UK increased from 928,000 to 3.09 million
- the proportion of all people working in the UK accounted for by non-UK nationals increased from 3.5% to 10.0%
- this increase in non-UK nationals working in the UK reflects the admission of several new member states to the European Union

Looking in more detail at non-UK nationals working in the UK, between January to March 2014 and January to March 2015, the number of:

- non-UK nationals from the European Union (EU) working in the UK increased by 283,000 to reach 1.91 million
- non-UK nationals from outside the EU working in the UK increased by 11,000 to reach 1.18 million

Figure 3.1 shows the number of non-UK nationals from EU and non-EU countries working in the UK since comparable records began in 1997.

Figure 3.1: Non-UK nationals working in the UK, not seasonally adjusted

Source: Labour Force Survey - Office for National Statistics

Download chart

[XLS](#) [XLS format](#)
(29.5 Kb)

As shown in Figure 3.1, since January to March 2009, the number of non-UK nationals from outside the EU working in the UK has been broadly flat but the number of non-UK nationals from EU countries working in the UK has continued to increase.

For January to March 2015, there were 4.88 million people born abroad working in the UK, but the number of non-UK nationals working in the UK was much lower at 3.09 million. This is because the estimates for people born abroad working in the UK include some UK nationals. Looking at the estimates by country of birth, between January to March 2014 and January to March 2015, the number of:

- UK born people working in the UK increased by 307,000 to reach 26.11 million
- non-UK born people working in the UK increased by 264,000 to reach 4.88 million

4. Actual hours worked

What is actual hours worked ?

[Actual hours worked](#) measures the number of hours worked in the economy. Changes in actual hours worked reflect changes in the number of people in employment and the average hours worked by those people.

Where to find data about hours worked

Hours worked estimates are available at Tables 7 and 7(1) of the pdf version of this statistical bulletin and at [data tables HOUR01 \(498 Kb Excel sheet\)](#) and [HOUR02 \(1.72 Mb Excel sheet\)](#).

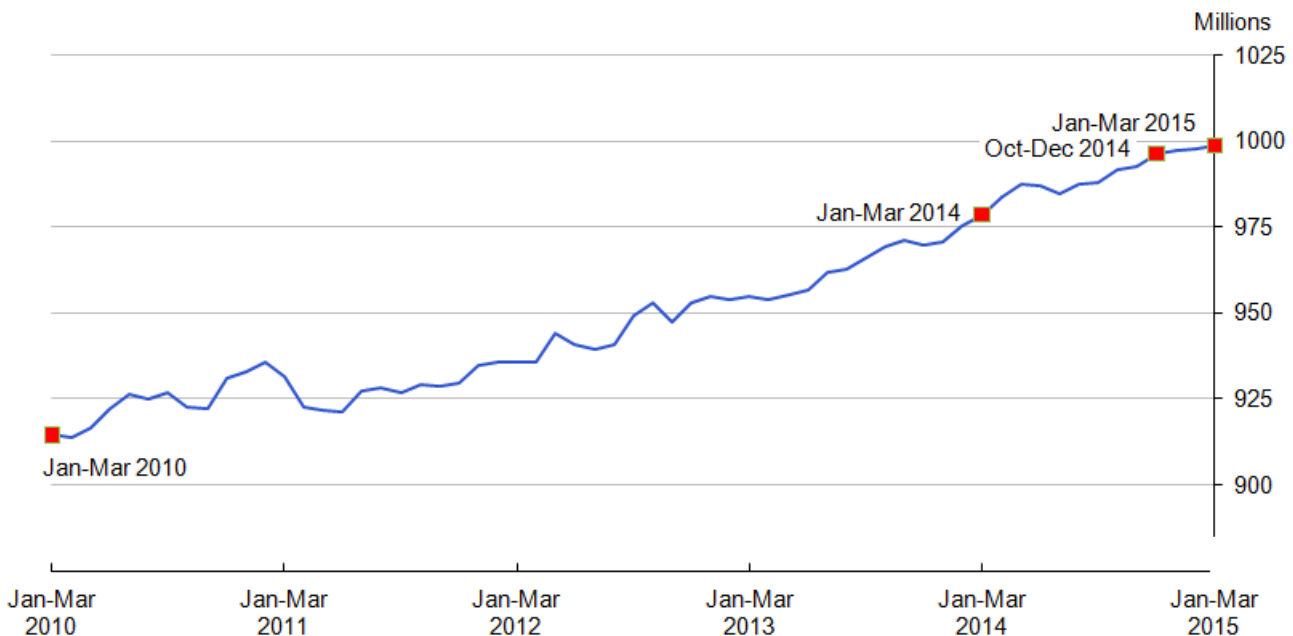

Commentary

Total hours worked per week were 998.6 million for January to March 2015. This was:

- 2.4 million (0.2%) more than for October to December 2014
- 20.2 million (2.1%) more than for a year earlier
- 84.2 million (9.2%) more than 5 years previously

Figure 4.1 shows total hours worked for the last 5 years.

Figure 4.1: Total hours worked per week, seasonally adjusted

Source: Labour Force Survey - Office for National Statistics

Download chart

XLS [XLS format](#)

(28.5 Kb)

For January to March 2015:

- people working full-time worked, on average, 37.4 hours per week in their main job, little changed compared with a year earlier
- people working part-time worked, on average, 16.3 hours per week in their main job, 0.3 hours higher than for a year earlier

5. Workforce jobs (first published on 18 March 2015)

What is workforce jobs ?

[Workforce jobs](#) measures the number of filled jobs in the economy. The estimates are mainly sourced from employer surveys. Workforce jobs is a different concept from employment, which is sourced from the Labour Force Survey, as employment is an estimate of people and some people have more than one job.

A [comparison between estimates of employment and jobs](#) is available in an article published on our website.

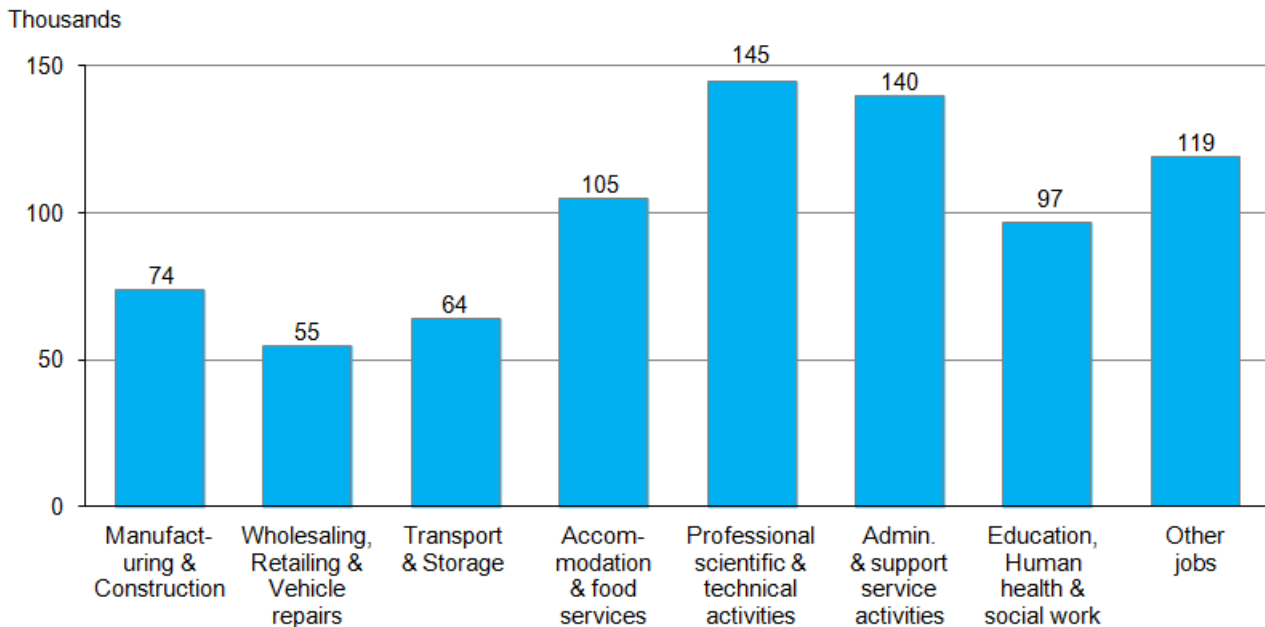

Where to find data about workforce jobs

Jobs estimates are available at Tables 5 and 6 of the pdf version of this statistical bulletin and at [data tables JOBS01 \(55.5 Kb Excel sheet\)](#) and [JOBS02 \(325 Kb Excel sheet\)](#).

Commentary

For December 2014 there were 33.52 million workforce jobs, 87,000 more than for September 2014 and 800,000 more than for a year earlier. Figure 5.1 shows changes in the number of jobs by industrial sector between December 2013 and December 2014.

Figure 5.1: Workforce jobs changes between December 2013 and December 2014, seasonally adjusted

Source: Office for National Statistics

Download chart

[XLS](#) [XLS format](#)

(26 Kb)

Since comparable records began in 1978, the number of jobs in the manufacturing and mining and quarrying sectors has declined, but jobs in the service sectors have increased substantially. Between June 1978 and December 2014:

- the proportion of jobs accounted for by the manufacturing and mining and quarrying sectors fell from 26.4% to 8.0%
- the proportion of jobs accounted for by the services sector increased from 63.2% to 83.4%.

While comparable estimates for workforce jobs by industry begin in 1978, [some information back to 1841, based on Census data](#), are available in a report published in June 2013.

6. Average weekly earnings

What is average weekly earnings ?

[Average Weekly Earnings](#) measures money paid to employees in Great Britain in return for work done, before tax and other deductions from pay. The estimates do not include earnings of self-employed people. Estimates are available for both total pay (which includes bonuses) and for regular pay (which excludes bonus payments). The estimates are not just a measure of pay

settlements as they also reflect compositional changes within the workforce. Further information is available at **Notes for Earnings** at the end of this section.

Where to find data on average weekly earnings

Average weekly earnings estimates are available at Tables 15, 16 and 17 of the pdf version of this statistical bulletin and at [data tables EARN01 \(610 Kb Excel sheet\)](#), [EARN02 \(538 Kb Excel sheet\)](#) and [EARN03 \(609 Kb Excel sheet\)](#).

While comparable records for average weekly earnings start in 2000, modelled estimates back to 1963 (which do not have National Statistics status) are available at [data table EARN02 \(538 Kb Excel sheet\)](#).

Estimates back to 1750 (which do not have National Statistics status) have been published by the Bank of England in the spreadsheet [Three centuries of macroeconomic data](#) (at column G in worksheet 18).

Where to find more information about earnings

An article looking at [bonus payments](#) was published on 29 August 2014.

An article looking at [UK wages over the last four decades](#) was published on 3 July 2014.

The [Annual Survey of Hours and Earnings \(ASHE\)](#), published on 19 November 2014, provides more detailed data.

Commentary

For March 2015:

- average regular pay (excluding bonuses) for employees in Great Britain was £460 per week before tax and other deductions from pay
- average total pay (including bonuses) for employees in Great Britain was £489 per week before tax and other deductions from pay

Between January to March 2014 and January to March 2015 **regular pay** for employees in Great Britain increased by 2.2%, the highest annual growth rate since April to June 2011. For March 2015, higher growth rates were recorded across the private sector, particularly for construction, compared with February 2015.

Between January to March 2014 and January to March 2015, **total pay** for employees in Great Britain increased by 1.9%, higher than the growth rate between the 3 months to February 2014 and the 3 months to February 2015 (1.7%). For March 2015 higher bonuses were recorded across the private sector, particularly for finance and business services, compared with February 2015.

The Consumer Prices Index (CPI) was unchanged in the year to March 2015, that is, a 12-month growth rate of 0.0%.

Figure 6.1 compares the annual growth rates for both regular and total pay with consumer price inflation.

Figure 6.1: Average earnings and consumer prices annual growth rates

Source: Office for National Statistics

Notes:

1. Figure 6.1 shows monthly estimates for the Consumer Prices Index (CPI) from March 2010 to March 2015 and three month average estimates for Average Weekly Earnings (AWE) from January to March 2010 to January to March 2015.
2. The CPI series is for the United Kingdom and is compiled from prices data based on a large and representative selection of individual goods and services. The AWE series are for Great Britain and are sourced from the Monthly Wages and Salaries Survey
3. The AWE series are seasonally adjusted. The CPI series is not seasonally adjusted.

Download chart

[XLS](#) [XLS format](#)
(29 Kb)

Since comparable records began in 2000, average total pay for employees in Great Britain has increased from £311 a week in January 2000 to £489 a week in March 2015; an increase of 56.9%. Between January 2000 and March 2015, the Consumer Prices Index increased by 38.5%.

Notes for Average Weekly Earnings

1. The estimates are in current prices; this means that they are not adjusted for price inflation. The estimates relate to Great Britain and include salaries but not unearned income, benefits in kind or arrears of pay.

2. As well as pay settlements, the estimates reflect bonuses, changes in the number of paid hours worked and the impact of employees paid at different rates joining and leaving individual businesses. The estimates also reflect changes in the overall structure of the workforce; for example, fewer low paid jobs in the economy would have an upward effect on the earnings growth rate.
3. Lloyds Banking Group plc is reclassified to the private sector from April 2014 following the sale of some government owned shares to private sector investors. It is classified to the public sector between July 2009 and March 2014. We estimate that, if the April 2014 reclassification had not occurred, the public sector single month growth rates from April 2014 would have been around 0.3 percentage points higher and the corresponding private sector growth rates would have been around 0.1 percentage points lower.

7. Labour disputes (not seasonally adjusted)

What is labour disputes?

The [labour disputes](#) estimates measure strikes connected with terms and conditions of employment.

Where to find data about labour disputes

Labour disputes estimates are available at Table 20 of the pdf version of this statistical bulletin and at [data table LABD01 \(114 Kb Excel sheet\)](#).

Commentary

In March 2015, there were 23,000 working days lost from 17 stoppages. For the 12 months ending March 2015, there were 708,000 working days lost from 151 stoppages.

Since records began in December 1931:

- the highest cumulative 12 month estimate for working days lost was 32.2 million for the 12 months to April 1980
- the lowest cumulative 12 month estimate for working days lost was 143,000 for the 12 months to March 2011

Working days lost are at historically low levels when looking at the longer run time series back to the 1930s, available at [data table LABD01 \(114 Kb Excel sheet\)](#).

Figure 7.1 shows cumulative 12 month totals for working days lost for the last five years.

Figure 7.1: Working days lost cumulative 12 months totals, not seasonally adjusted

Source: Labour Disputes Statistics - Office for National Statistics

Download chart

[XLS](#) [XLS format](#)

(27 Kb)

8. Unemployment

What is unemployment ?

[Unemployment](#) measures people without a job who have been actively seeking work within the last 4 weeks and are available to start work within the next 2 weeks.

[Explaining the concepts of employment, unemployment and economic inactivity](#) is available on our website as a short video.

Where to find data about unemployment

Unemployment estimates for the UK are available at Table 9 of the pdf version of this statistical bulletin and at [data table UNEM01 \(2.24 Mb Excel sheet\)](#).

Estimates for the unemployment rate back to 1870 (which do not have National Statistics status) have been published by the Bank of England in the spreadsheet [Three centuries of macroeconomic data](#) (at column S in worksheet 19).

International comparisons of unemployment rates are available at Table 19 of the pdf version of this statistical bulletin and at [data table A10 \(272.5 Kb Excel sheet\)](#).

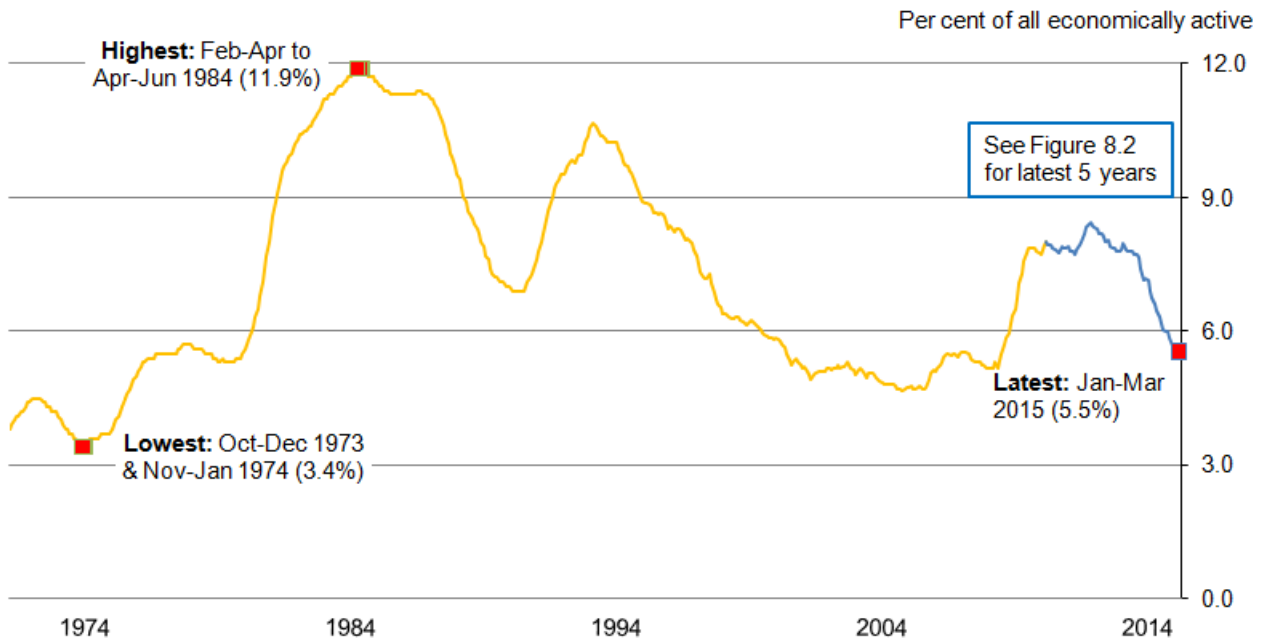

European Union (EU) unemployment rates were published in a [Eurostat News Release](#) on 30 April 2015.

Commentary

The unemployment rate is not the proportion of the total population who are unemployed. It is the proportion of the economically active population (those in work plus those seeking and available to work) who are unemployed. This follows [guidelines specified by the International Labour Organisation](#) and it ensures that UK unemployment rates are broadly comparable with those published by other countries.

Figure 8.1 shows that the lowest unemployment rate recorded since comparable records began in 1971 was 3.4% in late 1973 to early 1974 and the highest rate, of 11.9%, was recorded in 1984 during the downturn of the early 1980s. The unemployment rate for the latest time period, January to March 2015, was 5.5%.

Download chart

[XLS](#) [XLS format](#)

(28.5 Kb)

The unemployment rate for those aged 16 and over for January to March 2015 was 5.5%. This was:

- down from 5.7% for October to December 2014
- down from 6.8% for a year earlier
- higher than the pre-downturn trough of 5.2% for late 2007 to early 2008

For January to March 2015, there were 1.83 million unemployed people. This was 35,000 fewer than for October to December 2014 and 386,000 fewer than for a year earlier.

Looking at unemployment for men and women for January to March 2015, there were:

- 1.01 million unemployed men, 34,000 fewer than for October to December 2014 and 225,000 fewer than for a year earlier
- 821,000 unemployed women, little changed compared with October to December 2014 but 161,000 fewer than for a year earlier

Looking at unemployment by how long people have been out of work and seeking work, for January to March 2015 there were:

- 955,000 people who had been unemployed for up to 6 months, 31,000 more than for October to December 2014 but 91,000 fewer than for a year earlier

- 284,000 people who had been unemployed for between 6 and 12 months, 16,000 fewer than for October to December 2014 and 66,000 fewer than for a year earlier
- 588,000 people who had been unemployed for over 12 months, 50,000 fewer than for October to December 2014 and 228,000 fewer than for a year earlier

Looking at international comparisons, the unemployment rate for the European Union (EU) was 9.8% of the economically active population for March 2015. Within the EU, the highest unemployment rates were for Greece (25.7% for January 2015) and Spain (23.0% for March 2015). The UK unemployment rate of 5.5%, for January to March 2015, was the second lowest in the EU, with Germany the only EU country with a lower unemployment rate (4.7% for March 2015). The unemployment rate for the United States was 5.5% for March 2015 and 5.4% for April 2015.

Figure 8.3 shows the unemployment rates for the UK, the EU and the United States (US) for the last 5 years. It shows that the unemployment rate for the UK has been substantially lower than that for the whole of the EU. The unemployment rate for the US has moved in a downward direction since early 2010 and the UK unemployment rate has been generally falling since early 2012. Since early 2013 the unemployment rate for the US has generally been slightly lower than the rate for the UK.

Figure 8.3: Unemployment rates for the United Kingdom, European Union and United States, seasonally adjusted

Source: Labour Force Survey - Office for National Statistics

Notes:

1. The unemployment rates for the UK and the United States are for those aged 16 and over. The unemployment rate for the EU is for those aged from 15 to 74.
2. Figure 8.3 shows monthly estimates for the EU and for the United States from March 2010 to March 2015 and three month average estimates for the UK from January to March 2010 to January to March 2015.

(30.5 Kb)

9. Claimant Count

Introduction

The [Claimant Count](#) measures the number of people claiming benefits principally for the reason of being unemployed.

Since July 2014, we have published two measures of the Claimant Count; the headline Claimant Count (which is a National Statistic) and a new experimental measure which, unlike the headline measure, includes some claimants of Universal Credit (UC).

Where to find data about the Claimant Count

Claimant Count estimates are available at Tables 10, 10(1) and 11 of the pdf version of this statistical bulletin and at [data tables CLA01 \(394.5 Kb Excel sheet\)](#), [CLA02 \(545.5 Kb Excel sheet\)](#) and [CLA03 \(71 Kb Excel sheet\)](#).

While comparable records start in 1971, some data back to 1881 (which do not have National Statistics status) are available from the “Historic Data” worksheet within [data table CLA01 \(394.5 Kb Excel sheet\)](#).

What is the headline Claimant Count ?

Since October 1996 it has been a count of the number of people claiming Jobseeker’s Allowance (JSA). Between January 1971 (when comparable estimates start) and September 1996 it is an estimate of the number of people who would have claimed JSA if it had existed at that time.

It includes people who claim JSA but who do not receive payment. For example some claimants will have had their benefits stopped for a limited period of time by Jobcentre Plus. Some people claim JSA in order to receive National Insurance Credits.

Commentary (Headline Claimant Count)

Figure 9.1 shows the headline Claimant Count since comparable records began in 1971. It shows that the lowest number of people claiming unemployment related benefits was 422,600 in December 1973 and the highest figure was 3.09 million in July 1986. For the latest month, April 2015, there were 763,800 people claiming Jobseeker’s Allowance (JSA).

Figure 9.1: Headline Claimant Count from January 1971, seasonally adjusted

Source: Office for National Statistics, Department for Work and Pensions

Download chart

[XLS](#) [XLS format](#)

(61 Kb)

Looking in more detail at the most recent 5 years, Figure 9.2 shows the headline Claimant Count, which excludes claimants of Universal Credit, from April 2010 to April 2015.

Figure 9.2: Headline Claimant Count, seasonally adjusted

Source: Office for National Statistics, Department for Work and Pensions

Download chart

[XLS](#) [XLS format](#)

(31.5 Kb)

For April 2015 there were 763,800 people claiming JSA. The number of JSA claimants has fallen for 30 consecutive months and it is:

- down 12,600 from March 2015 (the smallest monthly fall since March 2013)
- down 349,600 from a year earlier
- 14,600 lower than the pre-downturn trough of 778,400 for February 2008

What is the experimental adjusted Claimant Count ?

The experimental adjusted Claimant Count differs from the headline Claimant Count because, as well as JSA claimants, it also includes some claimants of Universal Credit (UC) from May 2013 (the first month in which the Claimant Count is affected by UC).

- Between May 2013 and October 2013, the UC estimates included in the adjusted Claimant Count include **all claimants of UC** including those who were in work.
- From November 2013 they include all **out of work** UC claimants but include some claimants who are not required to look for work (who should ideally be excluded from the Claimant Count).

See Background Notes to this statistical bulletin for further details.

Commentary (Experimental adjusted Claimant Count)

The experimental adjusted Claimant Count shows that, for April 2015, there were 799,400 people claiming unemployment related benefits. This was:

- down 6,500 from March 2015
- down 317,900 from a year earlier
- 21,000 higher than the pre-downturn trough of 778,400 for February 2008

10. Comparison between unemployment and the Claimant Count

[Unemployment](#) is measured according to internationally accepted [guidelines specified by the International Labour Organisation \(ILO\)](#). Unemployed people in the UK are:

- without a job, have actively sought work in the last 4 weeks and are available to start work in the next 2 weeks, or;
- out of work, have found a job and are waiting to start it in the next 2 weeks.

People who meet these criteria are classified as unemployed irrespective of whether or not they claim Jobseeker's Allowance or other benefits. The estimates are derived from the Labour Force Survey and are published for three month average time periods.

The [Claimant Count](#) measures the number of people claiming benefits principally for the reason of being unemployed. As explained at Section 9 of this statistical bulletin, since July 2014 we have published two measures of the Claimant Count; the headline Claimant Count (which is a National Statistic) and a new experimental measure. In this section of the bulletin, quarterly movements in unemployment are compared with quarterly movements in the headline Claimant Count.

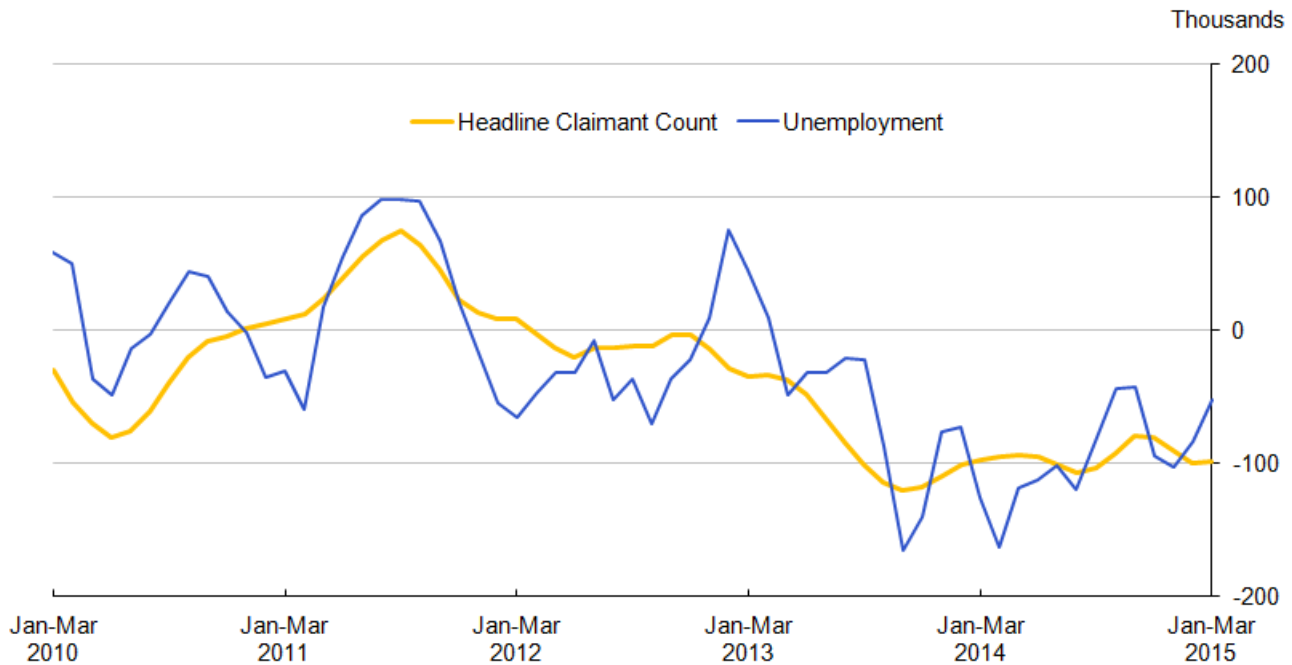

Since October 1996, the headline Claimant Count has been a count of the number of people claiming Jobseeker's Allowance (JSA). Some JSA claimants will not be classified as unemployed. For example, people in employment working fewer than 16 hours a week can be eligible to claim JSA depending on their income.

Figure 10.1 and the associated spreadsheet compare quarterly movements in unemployment and the headline Claimant Count for the same 3 month average time periods. The unemployment estimates shown in this comparison exclude unemployed people in the 16 to 17 and 65 and over age groups as well as unemployed people aged from 18 to 24 in full-time education. This provides a more meaningful comparison with the headline Claimant Count than total unemployment because people in these population groups are not usually eligible to claim JSA.

When 3 month average estimates for the headline Claimant Count are compared with unemployment estimates for the same time periods and for the same population groups (people aged from 18 to 64 excluding 18 to 24 year olds in full-time education), between October to December 2014 and January to March 2015:

- unemployment fell by 52,000
- the headline Claimant Count fell by 98,000

Figure 10.1: Quarterly changes in Unemployment and the headline Claimant Count (aged 18 to 64), seasonally adjusted

Source: Office for National Statistics, Department for Work and Pensions

Notes:

1. Unemployment estimates are sourced from the Labour Force Survey (a survey of households). The unemployment figures in this chart, and the associated spreadsheet, exclude unemployed people aged from 18 to 24 in full-time education.
2. Claimant Count estimates are sourced from administrative data from Jobcentre Plus (part of the Department for Work and Pensions).

Download chart

[XLS](#) [XLS format](#)
(226 Kb)

11. Economic inactivity

What is economic inactivity ?

[Economically inactive](#) people are not in employment but do not meet the internationally accepted definition of unemployment because they have not been seeking work within the last 4 weeks and/or they are unable to start work within the next 2 weeks.

[Explaining the concepts of employment, unemployment and economic inactivity](#) is available on our website as a short video.

Where to find data on economic inactivity

Economic inactivity estimates are available at Tables 1 and 13 of the pdf version of this statistical bulletin and at [data tables A02 \(1.47 Mb Excel sheet\)](#) and [INAC01 \(2.72 Mb Excel sheet\)](#).

Commentary

The proportion of people, aged from 16 to 64, not in work and neither seeking nor available to work is known as the economic inactivity rate. Figure 11.1 shows the economic inactivity rate for people aged from 16 to 64 since comparable records began in 1971.

Figure 11.1 shows that the economic inactivity rate increased during the downturn of the early 1980s reaching a record high of 25.9% in 1983. As the economy improved in the late 1980s, the economic inactivity rate resumed its downward path, reaching a record low of 21.7% in late 1989 and 1990, before the economic downturn of the early 1990s drove it back up again. Following an increase in the economic inactivity rate during the economic downturn of 2008 to 2009, it resumed its generally downward path.

Figure 11.1: Economic Inactivity rate (aged 16 to 64) from 1971, seasonally adjusted

Source: Labour Force Survey - Office for National Statistics

[XLS](#) [XLS format](#)
(58.5 Kb)

Since comparable records began in 1971, the economic inactivity rate for men has been gradually rising while the rate for women has been gradually falling.

Figure 11.2 looks in more detail at the economic inactivity rate for the last 5 years.

Figure 11.2: Economic inactivity rate (aged 16 to 64), seasonally adjusted

Source: Labour Force Survey - Office for National Statistics

Download chart

[XLS](#) [XLS format](#)

(32.5 Kb)

The economic inactivity rate for those aged from 16 to 64 for January to March 2015 was 22.1%. This was down from 22.3% for October to December 2014 but unchanged compared with a year earlier.

For January to March 2015, there were 8.98 million people aged from 16 to 64 not in work and neither seeking nor available to work (known as economically inactive), 69,000 fewer than for October to December 2014 but little changed compared with a year earlier.

Looking in more detail at the 8.98 million people aged from 16 to 64 who were economically inactive for January to March 2015, the two largest categories were students and people looking after the family or home (each of which accounted for just over a quarter of the total):

- there were 2.31 million people who were not looking for work because they were studying, 30,000 fewer than for October to December 2014 and 9,000 fewer than for a year earlier
- there were 2.28 million people (of which 2.05 million were women) who were not looking for work because they were looking after the family or home, 29,000 fewer than for October to December 2014 and 10,000 fewer than for a year earlier

The third and fourth largest categories were long-term sick (around 22% of the total) and retired (around 14% of the total):

- there were 2.01 million people who were not looking for work due to long-term sickness, 18,000 fewer than for October to December 2014 but 23,000 more than for a year earlier
- there were 1.28 million people who were not looking for work because they had retired, virtually unchanged compared with October to December 2014 but 48,000 fewer than for a year earlier, partly due to ongoing changes to the state pension age for women resulting in fewer women retiring between the ages of 60 and 65

A more detailed breakdown of economic inactivity by reason is available at Table 13 of the pdf version of this Statistical Bulletin and at [data table INAC01 \(2.72 Mb Excel sheet\)](#).

12. Young people in the labour market

Where to find data on young people in the labour market

Estimates for young people in the labour market are available at Table 14 of the pdf version of this statistical bulletin and at [data table A06 \(2.57 Mb Excel sheet\)](#).

Where to find more information about young people in the labour market

Estimates for [young people who were Not in Education, Employment or Training \(NEET\)](#) for October to December 2014 were published on 26 February 2015. Estimates for January to March 2015 will be published on 21 May 2015.

Commentary

For January to March 2015, for people aged from 16 to 24, there were:

- 3.89 million people in work (including 883,000 full-time students with part-time jobs)
- 735,000 unemployed people (including 258,000 full-time students looking for part-time work)
- 2.65 million economically inactive people, most of whom (2.00 million) were full-time students

It is a common misconception that all people in full-time education are classified as economically inactive. This is not the case as people in full-time education are included in the employment estimates if they have a part-time job and are included in the unemployment estimates if they are seeking part-time work.

Figure 12.1: Young people (aged 16 to 24) in the labour market for January to March 2015, seasonally adjusted

Source: Labour Force Survey - Office for National Statistics

Notes:

1. FTE = Full-time education.
2. The “Not in full-time education” series includes people in part-time education and/or some form of training.

Download chart

[XLS](#) [XLS format](#)
(30 Kb)

Figure 12.2 shows how the latest estimates, for January to March 2015, for employment, unemployment and economic inactivity for people aged from 16 to 24 compare with the previous quarter (October to December 2014) and the previous year (January to March 2014).

Figure 12.2: Changes in the number of young people (aged 16 to 24) in the labour market, seasonally adjusted

Source: Labour Force Survey - Office for National Statistics

Download chart

[XLS](#) [XLS format](#)
(24 Kb)

For January to March 2015, the unemployment rate for 16 to 24 year olds was 15.9%. This was:

- lower than for October to December 2014 (16.2%)
- lower than for a year earlier (18.9%)
- higher than the pre-downturn trough of 13.8% for the 3 months ending February 2008

The unemployment rate for those aged from 16 to 24 has been consistently higher than that for older age groups. Since comparable records began in 1992:

- the lowest youth unemployment rate was 11.6% for March to May 2001
- the highest youth unemployment rate was 22.5% for late 2011

Comparisons of youth unemployment rates over time are complicated by the fact that, since comparable records began in 1992, the proportion of people aged from 16 to 24 in full-time education has increased substantially from 26.2% for March to May 1992 to 43.2% for January to March 2015. Unemployment rates are not the proportion of the total population who are unemployed. They are the proportion of the economically active population (those in work plus those seeking and available to work) who are unemployed. The long-term increase in the proportion of young people going into full-time education reduces the size of the economically active population and therefore increases the unemployment rate.

Looking at international comparisons, the youth unemployment rate (for those aged from 15 to 24) for the European Union (EU) was 20.9% for March 2015. Within the EU, the highest youth unemployment rates were for Spain (50.1% for March 2015) and for Greece (50.1% for January 2015). The lowest youth unemployment rates were for Germany (7.2% for March 2015) and for Austria (10.5% for March 2015). These EU youth unemployment rates were published in a [Eurostat news release](#) on 30 April 2015.

13. Redundancies

What are redundancies ?

The [redundancies](#) estimates measure the number of people who have been made redundant or have taken voluntary redundancy.

Where to find data on redundancies

Redundancies estimates are available at Tables 23 and 24 of the pdf version of this statistical bulletin and at [data tables RED01 \(212 Kb Excel sheet\)](#) and [RED02 \(2.34 Mb Excel sheet\)](#).

Commentary

For January to March 2015, 110,000 people had become redundant in the 3 months before the Labour Force Survey interviews. This was:

- little changed compared with October to December 2014
- 16,000 fewer than for a year earlier
- 202,000 fewer than the peak of 311,000 recorded for February to April 2009

Figure 13.1 shows the number of people who had become redundant for the last 5 years.

Figure 13.1: Redundancies, seasonally adjusted

Source: Labour Force Survey - Office for National Statistics

Download chart

[XLS](#) [XLS format](#)

(28 Kb)

14. Vacancies

What are vacancies ?

[Vacancies](#) are defined as positions for which employers are actively seeking to recruit outside their business or organisation.

Where to find data about vacancies

Vacancies estimates are available at Tables 21, 21(1) and 22 of the pdf version of this statistical bulletin and at [data tables VACS01 \(65.5 Kb Excel sheet\)](#), [VACS02 \(150 Kb Excel sheet\)](#) and [VACS03 \(80 Kb Excel sheet\)](#).

Commentary

There were 733,000 job vacancies for February to April 2015. This was:

- up 9,000 from the 3 months to January 2015
- up 95,000 from a year earlier

Figure 14.1 shows the number of job vacancies since comparable records began in 2001.

Figure 14.1: Vacancies from 2001, seasonally adjusted

Source: Vacancy Survey - Office for National Statistics

Download chart

[XLS](#) [XLS format](#)

(34 Kb)

15. Main out of work benefits, not seasonally adjusted

What are main out of work benefits ?

Main out of work benefits includes claimants of Jobseeker's Allowance and Employment and Support Allowance and other incapacity benefits. It also includes claimants of Income Support and Pension Credit. While most people claiming these benefits are out of work a small number are in employment. These estimates exclude claimants in Northern Ireland.

The estimates are not seasonally adjusted and it is therefore best practice to compare the estimates for November 2014 with those for a year earlier rather than with those for August 2014.

Where to find data about main out of work benefits

Estimates of claimants of main out of work benefits are available at Table 25 of the pdf version of this statistical bulletin and at [data table BEN01 \(60.5 Kb Excel sheet\)](#).

Commentary

For November 2014 there were 3.90 million people claiming main out of work benefits. This was:

- 350,800 fewer than for November 2013
- 1.20 million fewer than the peak of 5.10 million recorded for February 2010

For November 2014, 9.8% of the population aged from 16 to 64 were claiming main out of work benefits. This was:

- down from 10.7% for a year earlier
- the lowest since comparable records began in 1999

Figure 15.1 shows, for the last 5 years, the proportion of the population aged from 16 to 64 claiming main out of work benefits.

Figure 15.1: Proportion of population (aged 16 to 64) claiming main out of work benefits, not seasonally adjusted

Historic articles published in Economic and Labour Market Review and Labour Market Trends

Articles about labour market statistics were published in Labour Market Trends (up until 2006) and in Economic and Labour Market Review (from 2007 to 2011). Editions of [Labour Market Trends](#) are available on our website from July 2001 until December 2006 when the publication was discontinued. Editions of [Economic and Labour Market Review](#) are available on our website from the first edition, published in January 2007, up until the last edition published in May 2011.

Published ad hoc data and analysis

[Additional statistical data and analyses for labour market statistics](#) that have not been included in our standard publications are available on our website.

Methodological articles

A number of [methodological articles](#) about labour market statistics are available on our website.

(v) Revisions

Estimates for the most recent time periods are subject to revision due to the receipt of late and corrected responses to business surveys and revisions to seasonal adjustment factors which are re-estimated every month. Estimates are subject to longer run revisions, on an annual basis, resulting from reviews of the seasonal adjustment process. Estimates derived from the Labour Force Survey (a survey of households) are usually only revised once a year. Revisions to estimates derived from other sources are usually minor and are commented on in the statistical bulletin if this is not the case. Further information is available in the [labour market statistics revisions policy \(36.7 Kb Pdf\)](#).

One indication of the reliability of the key indicators in this statistical bulletin can be obtained by monitoring the size of revisions. [Data tables EMP05 \(1.26 Mb Excel sheet\)](#), [UNEM04 \(6 Mb Excel sheet\)](#), [JOBS06 \(383 Kb Excel sheet\)](#) and [CLA04 \(2.04 Mb Excel sheet\)](#) record the size and pattern of revisions over the last five years. These indicators only report summary measures for revisions. The revised data itself may be subject to sampling or other sources of error. Our standard presentation is to show 5 years worth of revisions (60 observations for a monthly series, 20 for a quarterly series).

(vi) Accuracy of the statistics: estimating and reporting uncertainty

Most of the figures in this statistical bulletin come from surveys of households or businesses. Surveys gather information from a sample rather than from the whole population. The sample is designed carefully to allow for this, and to be as accurate as possible given practical limitations like time and cost constraints, but results from sample surveys are always estimates, not precise figures.

This means that they are subject to some uncertainty. This can have an impact on how changes in the estimates should be interpreted, especially for short-term comparisons.

We can calculate the level of uncertainty (also called “sampling variability”) around a survey estimate by exploring how that estimate would change if we were to draw many survey samples for the same time period instead of just one. This allows us to define a range around the estimate (known as a “confidence interval”) and to state how likely it is in practice that the real value that the survey is trying to measure lies within that range. Confidence intervals are typically set up so that we can be 95% sure that the true value lies within the range – in which case we refer to a “95% confidence interval”.

For example, the unemployment rate for January to March 2015 was estimated to be 5.5%. This figure had a stated 95% confidence interval of +/- 0.2 percentage points. This means that we can be 95% certain that the true unemployment rate for January to March 2015 was between 5.3% and 5.7%. However, the best estimate from the survey was that the unemployment rate was 5.5%.

The number of people unemployed for the same period was estimated at 1,827,000, with a stated 95% confidence interval of +/- 74,000. This means that we can be 95% sure that the true number of unemployed people was between 1,753,000 and 1,901,000. Again, the best estimate from the survey was that the number of unemployed people was 1,827,000.

As well as calculating precision measures around the numbers and rates obtained from the survey, we can also calculate them for changes in the numbers. For example, for January to March 2015, the estimated change in the number of unemployed people since October to December 2014 was a fall of 35,000, with a 95% confidence interval of +/- 79,000. This means that we can be 95% certain the actual change in unemployment was somewhere between an increase of 44,000 and a fall of 114,000, with the best estimate being a fall of 35,000. As the estimated fall in unemployment of 35,000 is smaller than the confidence interval of 79,000, the estimated fall in unemployment is said to be “not statistically significant”.

Working with uncertain estimates

In general, changes in the numbers (and especially the rates) reported in this statistical bulletin between three month periods are small, and are not usually greater than the level that is explainable by sampling variability. In practice, this means that small, short-term movements in reported rates (for example within +/- 0.3 percentage points) should be treated as indicative, and considered alongside medium and long-term patterns in the series and corresponding movements in administrative sources, where available, to give a fuller picture.

Seasonal adjustment and uncertainty

Like many economic indicators, the labour market is affected by factors that tend to occur at around the same time every year; for example school leavers entering the labour market in July and whether Easter falls in March or April. In order to compare movements other than annual changes in labour market statistics, such as since the previous quarter or since the previous month, the data are seasonally adjusted to remove the effects of seasonal factors and the arrangement of the calendar. All estimates discussed in this statistical bulletin are seasonally adjusted except where otherwise

stated. While seasonal adjustment is essential to allow for robust comparisons through time, it is not possible to estimate uncertainty measures for the seasonally adjusted series.

Where to find data about uncertainty and reliability

[Data table A11 \(48 Kb Excel sheet\)](#) shows sampling variabilities for estimates derived from the **Labour Force Survey**.

[Data table JOBS07 \(44.5 Kb Excel sheet\)](#) shows sampling variabilities for estimates of **workforce jobs**.

The sampling variability of the three month average **vacancies** level is around +/- 1.5% of that level.

Sampling variability information for **Average Weekly Earnings** growth rates are available from the "Sampling Variability" worksheets within [data tables EARN01 \(610 Kb Excel sheet\)](#) and [EARN03 \(609 Kb Excel sheet\)](#).

(vii) Other quality information

[Quality and methodology information papers](#) for labour market statistics are available on our website.

Further information about the Labour Force Survey (LFS) is available from:

- the [LFS user guide](#), and
- [LFS performance and quality monitoring reports](#).

Background notes

1. This month's release

There are no major developments in this month's release.

2. Next month's release

The headline measure of the Claimant Count will be changed in next month's release to include claimants of Universal Credit. See Background Note 3 for further details. There will also be revisions to the Claimant Count back to 2012, resulting from the annual review of the seasonal adjustment process, and revisions to national and regional Claimant Count rates back to 2001,

resulting from updating the denominators to take account of the latest estimates of Workforce Jobs.

3. Introduction of Universal Credit

The Pathfinder for Universal Credit started on 29 April 2013 with the introduction of this new benefit in one Jobcentre Plus office. This has been extended to further Jobcentre Plus offices across Great Britain. A list of [Jobcentres where Universal Credit is available](#) can be found on the GOV.UK website.

Universal Credit will replace a number of means-tested benefits including the means-tested element of Jobseeker's Allowance (JSA). It will not replace contributory based JSA.

The Claimant Count measures the number of people claiming benefits principally for the reason of being unemployed. Between October 1996 and April 2013, the only unemployment-related benefit in the UK was Jobseeker's Allowance (JSA) and the Claimant Count was therefore a count of the number of people claiming JSA.

Following a consultation in 2012, it was decided that, with the introduction of Universal Credit, the Claimant Count would include:

- people claiming contribution-based JSA (which is not affected by the introduction of Universal Credit)
- people claiming income-based JSA during the transition period while this benefit is being gradually phased out
- people claiming Universal Credit who are not working and who are subject to a full set of labour market jobseeker requirements, that is required to be actively seeking work and available to start work

Since July 2014, we have published two measures of the Claimant Count:

- a measure that only includes JSA claimants (this National Statistic is currently the headline measure)
- a new experimental measure which includes some claimants of Universal Credit

The experimental measure is still being developed by the Department for Work and Pensions and it currently includes all out of work Universal Credit claimants including those who are not required to look for work (who should ideally be excluded from the Claimant Count).

The number of Jobcentre Plus offices introducing Universal Credit has increased substantially over the last few months. Consequently we have concluded that the experimental measure of the Claimant Count is becoming the best estimate of the number of people claiming unemployment-related benefits. The experimental measure will therefore become the headline measure of the Claimant Count from next month's release, to be published on 17 June 2015, and Table 10 of the pdf version of this Statistical Bulletin will be replaced by a table showing the new version of the Claimant Count. A mock up version of this new Claimant Count table is available on request from Bob Watson, Labour Market Division, Office for National Statistics:

- Phone: +44(0)1633 455070
- Email: bob.watson@ons.gsi.gov.uk

It will not initially be possible to produce estimates of inflows and outflows or an age or duration breakdown for the new measure of the Claimant Count. Table 11 of the pdf version of this Statistical Bulletin will therefore be suspended. However we will continue to produce an age and duration breakdown of Jobseekers' Allowance which will be published on our website as reference tables accompanying this statistical bulletin.

4. Publication policy

Publication dates up to the end of 2015 are available in the background notes to the [June 2014 edition of this statistical bulletin](#).

A list of the job titles of those given [pre-publication access](#) to the contents of this statistical bulletin is available on our website.

5. Details of the policy governing the release of new data are available by visiting www.statisticsauthority.gov.uk/assessment/code-of-practice/index.html or from the Media Relations Office email: media.relations@ons.gsi.gov.uk

The United Kingdom Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics.

Designation can be broadly interpreted to mean that the statistics:

- meet identified user needs;
- are well explained and readily accessible;
- are produced according to sound methods; and
- are managed impartially and objectively in the public interest.

Once statistics have been designated as National Statistics it is a statutory requirement that the Code of Practice shall continue to be observed.

Source: Labour Force Survey
Labour market statistics enquiries: labour.market@ons.gsi.gov.uk

1. The Labour Force Survey (LFS) is a survey of the population of private households, student halls of residence and NHS accommodation.
2. The headline employment rate is the number of people aged 16 to 64 in employment divided by the population aged 16 to 64.
3. The headline unemployment rate is the number of unemployed people (aged 16+) divided by the economically active population (aged 16+). The economically active population is defined as those in employment plus those who are unemployed.
4. The headline inactivity rate is the number of economically inactive people aged 16 to 64 divided by the population aged 16 to 64.

Note on headline employment, unemployment and inactivity rates

The headline employment and inactivity rates are based on the population aged 16 to 64 but the headline unemployment rate is based on the economically active population aged 16 and over. The employment and inactivity rates for those aged 16 and over are affected by the inclusion of the retired population in the denominators and are therefore less meaningful than the rates for those aged from 16 to 64. However, for the unemployment rate for those aged 16 and over, no such effect occurs as the denominator for the unemployment rate is the economically active population which only includes people in work or actively seeking and able to work.

Note on headline employment, unemployment and inactivity levels

The headline employment and unemployment levels are for those aged 16 and over; they measure all people in work or actively seeking and able to work. However, the headline inactivity level is for those aged 16 to 64. The inactivity level for those aged 16 and over is less meaningful as it includes elderly people who have retired from the labour force.

Source: Labour Force Survey

1. The split between full-time and part-time employment is based on respondents' self-classification.

Labour market statistics enquiries: labour.market@ons.gsi.gov.uk

2. This series does not include all people on these programmes; it only includes those engaging in any form of work, work experience or work-related training.

3. These series cover Employees and Self-employed only. These series include some temporary employees recorded in columns 13 to 19.

4. The total includes those who did not give a reason for working part-time and it therefore does not equal the sum of columns 21, 23, 24 and 25.

Source: returns from public sector organisations

Explanatory Note: The public and private sector employment series have been affected by a number of major reclassifications where bodies employing large numbers of people have moved between the public and private sectors. These major reclassifications are as follows:

Further Education corporations and Sixth Form College corporations in England are included in the private sector from June 2012 but in the public sector for earlier time periods.

Royal Mail plc is included in the private sector from December 2013 but in the public sector for earlier time periods.

Lloyds Banking Group plc is included in the public sector from December 2008 to December 2013 but in the private sector for earlier and later time periods.

Royal Bank of Scotland plc is included in the public sector from December 2008 but in the private sector for earlier time periods.

Network Rail is included in the private sector before December 2002. From December 2002 onwards it is included in the public sector (except for the period from June 2003 to March 2004, when it is included in the private sector).

Northern Rock is included in the public sector from December 2007 until December 2011 but in the private sector for earlier and later time periods.

Bradford and Bingley is included in the public sector from September 2008 but in the private sector for earlier time periods.

The series shown at Table 4 (in columns 6 to 9) for public and private sector employment excluding the effects of major reclassifications show all of the above mentioned bodies included in the private sector for all time periods and excluded from the public sector for all time periods. When using figures from this table, the latest estimate of the number of people employed in the public and private sectors should be taken from columns 1 and 3 respectively. However the quarterly and annual changes in employment shown in these columns are affected by reclassifications. Figures from columns 6 and 8 should be used for assessments of the recent underlying changes in public and private sector employment. The changes in employment shown in these columns are measured on a consistent basis to remove the effect of major reclassifications. The quarterly movements between September and December 2014 are not affected by major reclassifications. However the quarterly changes for the series shown in columns 6 and 8 differ slightly from those in columns 1 and 3 because the series are separately seasonally adjusted.

1. Estimated as the difference between LFS total employment and the data from public sector organisations.

2. LFS employment data for March refer to February-April, June refers to May-July, September refers to August-October and December refers to November-January.

3. This series excludes locally engaged staff stationed outside the United Kingdom.

4. This series excludes the Northern Ireland Civil Service.

5. This series may not exactly equal the sum of the components because each component is independently seasonally adjusted.

Workforce jobs enquiries 01633 456776

Sources: Employer surveys, Labour Force Survey and administrative sources

1. Workforce Jobs figures are a measure of jobs rather than people. For this reason estimates of self-employment jobs and government supported trainee jobs differ from estimates of people in self-employment and in government supported training and employment programmes shown at Table 3. The estimates for government supported trainees shown in this table exclude trainees with contracts of employment as such people are included in the estimates of employee jobs.

2. This series is not exclusively a public sector series as it includes some private sector jobs. See table 4 for estimates of public and private sector employment.

Source: Labour Force Survey
Labour market statistics enquiries: labour.market@ons.gsi.gov.uk

1. The total series includes people who do not state their country of birth or nationality. The total levels series MGTM does not therefore equal the sum of the "UK" and "Non-UK" series.
2. This series consists of all 27 EU member states excluding the UK. It does not equal the sum of the EU14, EUA8, and "Romania & Bulgaria" series as it also includes Cyprus, Malta and Croatia.
3. Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain and Sweden.
4. Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Slovak Republic and Slovenia.

The estimates shown in this table relate to the number of people in employment and should not be used as a proxy for flows of foreign migrants into the UK.

1. The Claimant Count measures the number of people claiming benefits principally for the reason of being unemployed. Since October 1996 it has been a count of the number of people claiming Jobseeker's Allowance. Claimants of Universal Credit are not yet included in the headline Claimant Count. See Table 10(1) for experimental Claimant Count estimates including some claimants of Universal Credit.

The level measures the number of claimants on the second Thursday of each month (the "count date").

The flows figures are collected for 4 or 5 week periods between count dates; the figures are then standardised to a 4 1/3 week month. The levels and flows are independently seasonally adjusted. For these reasons, movements in the flows do not tally exactly with movements in the levels.

2. Denominator = Claimant Count + Workforce Jobs.

More detailed estimates are available from Nomis® at:

<http://www.nomisweb.co.uk>

Months where there are 5 weeks between count dates; the rest are 4 week periods.

Source: Jobcentre Plus administrative systems

1. The series are an indicative representation of how the Claimant Count series might look if information on Universal Credit was included. The indicative estimates are based on the Universal Credit information available at the time of producing each figure and revised one month after initial production. This may be different from the adjustment that is expected to be made to the Claimant Count once full information regarding Universal Credit is available.

2. The seasonally adjusted Claimant Count level series published at Table 10 of this Statistical Bulletin.

3. Caseload figures taken from the DWP Universal Credit - experimental official statistics publication.

- From November 2013 onwards, the Universal Credit figures represent those claimants of Universal Credit who had not worked in the reference period. This is likely to be a better estimate of unemployed Universal Credit claimants at a point in time than the estimates for earlier periods which include all Universal Credit claimants, but will still overstate the number.

4. An implied seasonal factor has been derived from the seasonally adjusted and not seasonally adjusted figures from Table 10 of this Statistical Bulletin. Claimant Count series are not directly seasonally adjusted at this level, with UK totals being the sum of individual seasonally adjusted series by region and sex.

5. Universal Credit figure adjusted using the implied seasonal factor. (Universal credit not seasonally adjusted * Implied seasonal factor / 100)

6. Indicative adjusted count (Claimant Count seasonally adjusted + Universal Credit seasonally adjusted)

Months where there are 5 weeks between count dates; the rest are 4 week periods.

Source: Jobcentre Plus administrative system

1. The number of people claiming Jobseeker's Allowance.

Labour market statistics enquiries: labour.market@ons.gsi.gov.uk

2. Only computerised claims for Jobseeker's Allowance are analysed by age and duration on a monthly basis. The figures in column 2 onwards therefore differ from the figures in column 1 and in Table 10. The differences reflect numbers of clerically processed claims, which currently amount to around 0.5 per cent of the total claimant count, and minor effects of rounding.

Months where there are 5 weeks between count dates. All the rest are 4 week periods.

Source: Labour Force Survey

Labour market statistics enquiries: labour.market@ons.gsi.gov.uk

1. Not in full-time education includes people in part-time education and/or some form of training. Estimates of the number of young people who were not in employment, education or training ("NEET") cannot therefore be derived from this table. Estimates of young people who were NEET are published separately at: <http://www.ons.gov.uk/ons/rel/lms/young-people-not-in-education--employment-or-training--neets/index.html>

2. People in full-time education are employed if they have a part-time job or unemployed if they are looking for part-time employment.

3. Denominator = all persons in the relevant age group for economically active, total in employment and economically inactive; economically active for unemployment.

1. Estimates of total pay include bonuses but exclude arrears of pay.

2. The figure in brackets is the percentage of whole economy employment in that sector or industry for the latest time period.

3. The three month average figures are the changes in the average seasonally adjusted values for the three months ending with the relevant month compared with the same period a year earlier.

4. From July 2009 Royal Bank of Scotland Group plc is classified to the public sector; for earlier time periods it is classified to the private sector. Between July 2009 and March 2014 Lloyds Banking Group plc is classified to the public sector; it is classified to the private sector for earlier and later time periods.

5. Between June 2010 and May 2012 English Further Education Corporations and Sixth Form College Corporations are classified to the public sector.

Before June 2010 and after May 2012 they are classified to the private sector.

6. From October 2013 Royal Mail plc is classified to the private sector; previously it is in the public sector.

1. Estimates of regular pay exclude bonuses and arrears of pay.

2. The figure in brackets is the percentage of whole economy employment in that sector or industry for the latest time period.

3. The three month average figures are the changes in the average seasonally adjusted values for the three months ending with the relevant month compared with the same period a year earlier.

4. From July 2009 Royal Bank of Scotland Group plc is classified to the public sector; for earlier time periods it is classified to the private sector. Between July 2009 and March 2014 Lloyds Banking Group plc is classified to the public sector; it is classified to the private sector for earlier and later time periods.

5. Between June 2010 and May 2012 English Further Education Corporations and Sixth Form College Corporations are classified to the public sector.

Before June 2010 and after May 2012 they are classified to the private sector.

6. From October 2013 Royal Mail plc is classified to the private sector; previously it is in the public sector.

REGIONAL AND INTERNATIONAL SUMMARY

Relationship between columns: 1=3+5

1. Labour Force Survey is tabulated by region of residence.

2. Denominator = all persons aged 16 to 64.

3. Denominator = Total economically active.

4. Quarter on quarter changes at regional level are particularly subject to sampling variability and should be interpreted in the context of changes over several quarters rather than in isolation.

Sources: Eurostat, OECD, national statistical offices.
Labour market statistics enquiries: labour.market@ons.gsi.gov.uk

1. All employment rates shown in this table are for those aged from 15 to 64 except for the employment rates for the UK published by the Office for National Statistics and the rate for the United States published by OECD which are for those aged from 16 to 64.

2. The employment rates for the EU are published by Eurostat (the EU's statistical office) and are not seasonally adjusted. Eurostat do not publish seasonally adjusted employment rates. The employment rates for Canada, Japan and the United States are published by the Organisation for Economic Cooperation & Development (OECD) and are seasonally adjusted.

5. The "Total EU" series consist of all 28 EU countries. The Eurozone figures consist of the following EU countries: Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Portugal, Slovak Republic, Slovenia and Spain.

6. Change on previous month except "Latvia" and "United Kingdom as published by Office for National Statistics" (change on previous quarter).

7. The EU unemployment rates are as published on the Eurostat database. For Sweden the rates on the database differ from those shown in the Eurostat News Release published on 30 April 2015. This is because the figures for Sweden on the Eurostat database are seasonally adjusted estimates but the figures for Sweden shown in the Eurostat News Release are the trend component.

3. Unemployment rates published by EUROSTAT for most EU countries (but not for the UK), are calculated by extrapolating from the most recent LFS data using monthly registered unemployment data. A standard population basis (15-74) is used by EUROSTAT except for Spain, Italy and the UK (16-74). The unemployment rate for the US is based on those aged 16 and over, but the rates for Canada and Japan are for those aged 15 and over. All unemployment rates are seasonally adjusted.

4. The unemployment rate for the UK published by EUROSTAT is based on the population aged 16-74 but the unemployment rate for the UK published by the Office for National Statistics is based on those aged 16 and over. There are other minor definitional differences.

Source: ONS Labour Disputes Inquiry
Labour disputes enquiries 01633 456724

1. Estimates of working days lost and workers involved are shown to the nearest thousand. Unrounded estimates of less than 500 therefore round to zero.

2. Due to rounding the working days lost for the public and private sectors may not add up to the total working days lost.

3. The latest 12 month cumulative totals for the figures in these columns will not necessarily equal the sum of the 12 months as some disputes continue for over one month. These disputes appear in each month's data, but only once in the total.

4. These series exclude disputes which do not result in a stoppage of work, those involving fewer than ten workers or lasting less than one day unless the total number of working days lost in the dispute is 100 or more.

Source: ONS Vacancy Survey/ Labour Force Survey

Vacancy Survey enquiries: vacancy.survey@ons.gsi.gov.uk, 01633 456777

1. Excludes Agriculture, Forestry and Fishing.

2. Unemployment estimates are produced from the Labour Force Survey (LFS) and are always one period behind the ONS Vacancy Survey estimates. This table therefore shows estimates for the same periods as shown in table 1 (which shows LFS estimates).

1. Excludes Agriculture, Forestry and Fishing.

Source: ONS Vacancy Survey

2. Not seasonally adjusted. These series do not display seasonality. Therefore the unadjusted series is the best estimate of a 'seasonally adjusted' series.

* Change on previous non-overlapping three month rolling average time period.

Vacancy Survey enquiries: vacancy.survey@ons.gsi.gov.uk, 01633 456777

Labour market statistics enquiries: labour.market@ons.gsi.gov.uk

1. The redundancy rate is the ratio of the redundancy level for the given quarter to the seasonally adjusted number of employees in the previous quarter, multiplied by 1,000.
2. The redundancies levels as derived directly from the Labour Force Survey do not currently display seasonality. For this reason series BEAO is currently identical to the not seasonally adjusted series BEYV shown at Table 24.

Labour market statistics enquiries: labour.market@ons.gsi.gov.uk

1. The estimates in this table are for calendar quarters only whereas the estimates at Table 23 are for rolling three-monthly time periods.
2. The total series includes those people who did not state their industry. The series also includes SIC 2007 categories A (Agriculture, forestry and fishing), B (Mining and quarrying), D (Electricity, gas, etc.) and E (Water supply, sewerage, etc.). These sectors are not shown separately in this table as the sample size is too small to provide reliable estimates. See footnote 2 at Table 23.
3. Includes both public and private sectors.
4. Other Services are not shown separately in this table as the sample size is too small to provide reliable estimates.

Source: Department for Work & Pensions (DWP)
Labour Market Statistics enquiries: labour.market@ons.gsi.gov.uk

1. This table includes all claimants of out of work benefits excluding both Universal Credit claimants and carers (as carers are not generally subject to labour market activation policies). Universal Credit claimants will be included in this table as soon as possible. While most people claiming these benefits will be out of work a small number will be in employment. This table shows the most up to date National Statistics currently available for claimants of incapacity benefits, lone parent and "other income related" benefits. More up to date early estimates of incapacity and lone parent benefits, which are not currently designated as National Statistics, have been published by the Department for Work and Pensions at: <https://www.gov.uk/government/publications/dwp-statistical-summaries-2015>

2. Each claimant is assigned to a statistical group to avoid double counting. There is a hierarchy as shown in the table (ie, Jobseeker followed by incapacity benefits, etc.). For example, a person claiming incapacity benefit and lone parent benefit is recorded in the former.

3. Jobseeker's Allowance (JSA) claimants for Great Britain. Due to methodological differences, these figures differ slightly from estimates of jobseekers claimants shown at Table 1.1 of the Department for Work & Pensions (DWP) Quarterly Statistical Summary. More up to date estimates for claimants of JSA for the United Kingdom are available at Table 10 of this Statistical Bulletin.

4. Claimants of Employment and Support Allowance, Incapacity Benefit and Severe Disablement Allowance.

5. Single recipients of Income Support with a child under qualifying age.

6. Claimants of Income Support or Pension Credit not included in the incapacity benefits or lone parent categories.

7. Proportions of population receiving state benefits have been calculated using residence based populations for those aged from 16 to 64. The jobseeker proportions differ from the Claimant Count rates shown at Table 10 of this Statistical Bulletin as the denominator for the latter is workforce jobs plus Claimant Count.
