

# Consumer Price Inflation, June 2015

Coverage: UK

Date: 14 July 2015

Geographical Area: UK

Theme: **Economy**

## Main points

- The Consumer Prices Index (CPI) was unchanged in the year to June 2015, that is, a 12-month rate of 0.0%, down from 0.1% in the year to May 2015.
- Falls in clothing and food prices were the main contributors to the change in the rate along with smaller rises in air fares than a year ago.
- There were no large upward effects to offset the change.
- CPIH (not a National Statistic) grew by 0.3% in the year to June 2015, down from 0.4% in May 2015.

## A brief description of Consumer Price Inflation

Consumer price inflation is the speed at which the prices of goods and services bought by households rise or fall. Consumer price inflation is estimated by using price indices. A way to understand a price index is to think of a very large shopping basket containing all the goods and services bought by households. The price index estimates changes to the total cost of this basket. Consumer price indices are published monthly.

A [video](#) and an [infographic](#) explain how consumer price inflation is calculated.

A price index can be used to measure inflation in a number of ways. The most common is to look at how the index has changed over a year. This is calculated by comparing the price index for the latest month with the same month a year ago. This is known as the 12-month inflation rate. This bulletin measures inflation to June 2015, so the 12-month rate measures changes in prices between June 2014 and June 2015.

A range of measures of consumer price and other price inflation are published. A [tale of many price indices](#) summarises information on the different measures.

## Consumer Prices Index (CPI)

### What is the CPI?

The CPI is a measure of consumer price inflation produced to international standards and in line with European regulations. First published in 1997 as the Harmonised Index of Consumer Prices (HICP), the CPI is the inflation measure used in the Government's target for inflation.

The CPI is also used for purposes such as uprating pensions, wages and benefits and can aid in the understanding of inflation on family budgets. For more information see [Users and uses of consumer price inflation statistics \(100.5 Kb Pdf\)](#).

### Latest figure and long-term trend

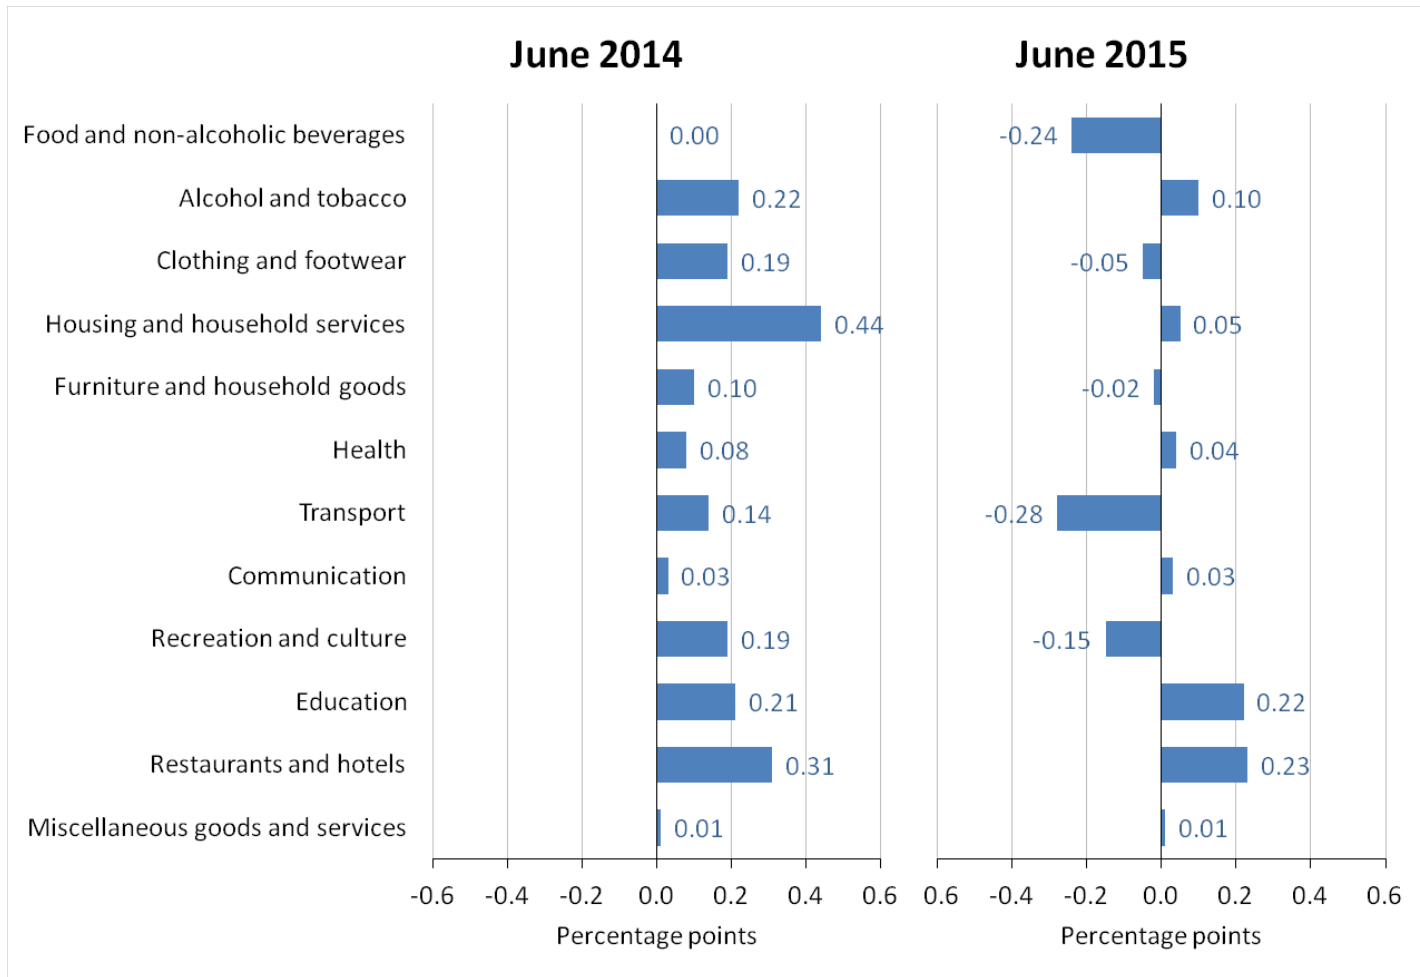

The CPI 12-month rate (the amount prices change over a year) between June 2014 and June 2015 stood at 0.0%. This means that a basket of goods and services that cost £100.00 in June 2014 would still have cost £100.00 in June 2015. This continues the trend of the previous 4 months when inflation had been at or around 0.0%.

In the year to June 2015, food prices fell by 2.2% and prices of motor fuels fell by 10.5%. These 2 groups, along with audio-visual and related equipment, have provided the largest downward contributions to the 12-month rate in each month of 2015. In June 2015, the food and motor fuels groups in total reduced the CPI 12-month rate by approximately 0.6 percentage points. Historically, price movements for these products have been among the main causes of inflation. An article was published in November 2014 which outlined some [possible factors that may be affecting prices \(477.2 Kb Pdf\)](#).

Figure A shows the contributions to the CPI 12-month rate in June 2015 compared with the contributions to the 12-month rate a year earlier. A larger version of the chart can be viewed by clicking on it (HTML version only).

**Consumer Prices Index (CPI): What are the main movements?**

This section explains which goods and services had the biggest impact on the change to the 12-month rate between May and June 2015 and, where relevant, considers the longer-term inflationary trends for these goods and services.

The change in the CPI 12-month rate can be calculated by comparing the 12-month rates for 2 consecutive months. An alternative, and equally valid, approach is to calculate it by comparing the price change between the latest 2 months and the price change between the same 2 months a year ago. [Explaining the contribution to change in the 12-month rate \(37.1 Kb Pdf\)](#) is a diagram explaining the calculation.

The CPI was unchanged between May and June 2015 compared with a rise of 0.2% between the same 2 months a year earlier. The 1-month movement was therefore 0.2 percentage points lower this year compared with a year ago, resulting in a fall in the CPI 12-month rate. The difference between the movements in the annual and monthly rates is due to rounding.

The largest downward contributions to the change in the CPI 12-month rate between May and June 2015 came from:

- **clothing and footwear:** prices, overall, fell by 0.4% between May and June this year compared with a rise of 0.6% between the same 2 months a year ago

Prices usually fall between May and June as the summer sales begin but last year the average prices of a number of products rose. The main downward effect came from garments, particularly women's outerwear.

- **transport:** prices, overall, rose by 0.2% between May and June 2015 compared with a larger rise of 0.6% a year earlier

The downward contribution came from transport services (particularly air transport and, to a lesser extent, sea transport) where fares rose this year but by less than a year ago. This was partially offset by a small upward contribution from motor fuels with average petrol prices rising by 1.1 pence per litre between May and June this year compared with a smaller rise of 0.6 pence per litre a year earlier. Diesel prices also rose this year, by 0.5 pence per litre, compared with a fall of 0.4 pence per litre a year ago

- **food and non-alcoholic beverages:** prices, overall, fell by 0.2% between May and June this year compared with a rise of 0.1% between the same 2 months a year ago.

The downward effect came from bread and cereals, and sugar, jam, syrups, chocolate and confectionery.

There was a smaller downward contribution from price movements for health products.

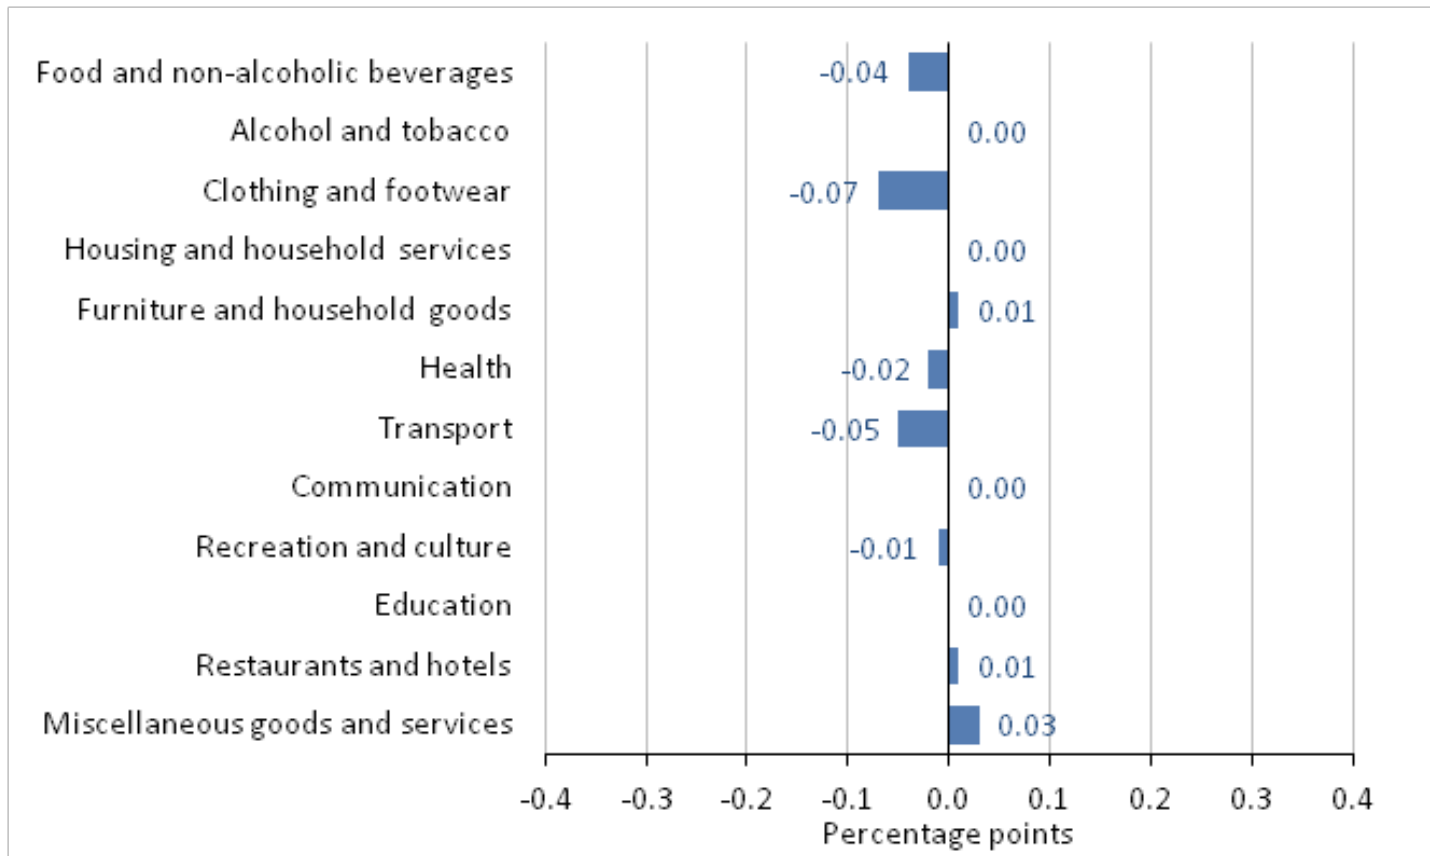

The largest, but relatively small, upward contribution to the change in the CPI 12-month rate between May and June 2015 came from:

- **miscellaneous goods and services:** prices, overall, rose by 0.2% between May and June 2015 compared with a fall of 0.1% between the same 2 months a year ago. The upward effect came principally from financial services.

Figure C shows the contributions to change from each part of the CPI basket of goods and services. A larger version of the chart can be viewed by clicking on it (HTML version only).

**CPIH**

The National Statistics status of CPIH has been discontinued pending work to investigate and improve the method for measuring owner occupiers' housing costs in this index. [Full details](#) can be found on the UK Statistics Authority website and in an [explanatory note \(313.9 Kb Pdf\)](#) on our website. The improvements from the resulting development work were introduced as part of the February 2015 dataset with the historical series revised back to 2005. Further information on the changes is available in 2 articles: [Improvements to the measurement of Owner Occupiers' Housing Costs and Private Housing Rental Prices \(2.48 Mb Pdf\)](#) and [Revising the weight of Owner Occupiers' Housing in CPIH \(197.4 Kb Pdf\)](#).

CPIH is a measure of UK consumer price inflation that includes owner occupiers' housing costs (OOH). These are the costs of housing services associated with owning, maintaining and living in one's own home. OOH does not include costs such as utility bills, minor repairs and maintenance, which are already included in the index.

CPIH uses an approach called rental equivalence to measure OOH. Rental equivalence uses the rent paid for an equivalent house as a proxy for the costs faced by an owner occupier. In other words this answers the question "how much would I have to pay in rent to live in a home like mine?" for an owner occupier. OOH does not seek to capture increases in house prices. Although this may be inconsistent with some users' expectations of measures of OOH, the inclusion of an asset price and therefore capital gains would make the index less suitable for a measure of consumption. OOH currently accounts for 17.8% of the expenditure weight of CPIH. This compares with a weight of 19.5% in 2005.

Currently, the method of calculation, the population coverage and the basket of goods and services are the same as the Consumer Prices Index (CPI), with the exception of OOH. The method of deriving the weights for CPIH and the data used for these are also the same as for CPI, with the exception of OOH. This can result in some differences from the CPI.

In June 2015, the 12-month rate (the rate at which prices increased between June 2014 and June 2015) for CPIH stood at 0.3%, down from 0.4% in May 2015. The difference between the CPI and CPIH annual rates in June 2015 was 0.3 percentage points, the same as the difference in May, despite a small upward contribution from owner occupiers' housing costs.

Figure D shows the CPIH and OOH component 12-month rates since January 2006 (the earliest date for which the official CPIH 12-month rate can be calculated). The CPI 12-month rate has been included for comparative purposes. Table B shows the CPIH and OOH component 1-month and 12-month rates and index values for the last year. A larger version of the chart can be viewed by clicking on it (HTML version only).

**Figure D: CPIH, OOH component and CPI 12-month rates since January 2006**

United Kingdom

**Retail Prices Index (RPI) and RPIJ**

In accordance with the Statistics and Registration Service Act 2007, the Retail Prices Index and its derivatives have been assessed against the Code of Practice for Official Statistics and found not to meet the required standard for designation as National Statistics. The [full assessment report](#) can be found on the UK Statistics Authority website.

The RPI is a long-standing measure of UK inflation that has historically been used for a wide range of purposes such as the indexation of pensions, rents and index-linked gilts. For further information see [Users and uses of consumer price inflation statistics \(100.5 Kb Pdf\)](#).

RPIJ is an improved variant of the Retail Prices Index, which is calculated using formulae that meet international standards. The rationale for creating RPIJ was to give users a better alternative to the RPI if their needs were for a measure of inflation based on the same population, classifications, weights, etc as the RPI. Currently, RPIJ also acts as an analytical series in that it allows users to see the impact of using the Jevons (which meets international standards) in place of the Carli formula (which does not meet international standards) in the RPI. The use of the different formulae at the elementary aggregate level is currently the only difference between the 2 indices. Detailed goods and services indices are not produced for RPIJ.

In June 2015, the 12-month rate for RPIJ stood at 0.4%, unchanged from May 2015.

The RPI 12-month rate for June 2015 stood at 1.0%, meaning that it was 0.6 percentage points higher than it would have been had it used formulae that meet international standards.

Figure E shows the RPI and RPIJ 12-month rates for the last 10 years. Over this period the RPIJ 12-month rate has been, on average, 0.5 percentage points lower than the RPI but the difference has increased to an average of 0.6 percentage points over the last 3 years. Cumulatively, inflation as measured by the RPI is 34.7% over the 10-year period, compared with 27.7% as measured by RPIJ. The use of the Carli formula has therefore added 7.0 percentage points to the change in prices over the last 10 years. A larger version of the chart can be viewed by clicking on it (HTML version only).

Table C shows the RPI and RPIJ 1-month and 12-month rates and index values for the last year.

**Background notes**

1. **News**

**Estimated effect of the July 2015 Budget on Consumer Price Inflation**

An article describing the estimated effects on consumer price inflation of duty and tax changes announced in the July 2015 Budget will be published on 15 July 2015.

**Introduction of the COICOP5 classification and re-referencing of CPI and CPIH**

A note will be published on 17 August 2015 setting out 2 important forthcoming developments for the Consumer Prices Index (CPI) and CPIH (a measure of inflation that includes owner occupiers' housing costs) that are due to be implemented in early 2016. The first of these is a re-referencing of the indices to 2015=100. The second is the introduction of a more detailed level of sub-category known as COICOP5.

### **Improvements to the measurement of CPIHY**

The National Statistics status of CPIH and its derivative indices has been discontinued pending work by us to investigate and improve the method for measuring owner occupiers' housing costs in these indices. The improvements from the resulting development work were introduced in CPIH as part of the February 2015 dataset. Improved methodology for owner occupiers' housing costs in the CPIHY (CPIH excluding indirect taxation) measure of consumer prices has been implemented as part of this release, with the historical series revised back to 2005.

### **Consultation on consumer price statistics**

The UK Statistics Authority launched a [public consultation](#) on consumer price statistics on 15 June. The consultation follows a [review of consumer price statistics](#) led by Mr Paul Johnson (Director of the Institute of Fiscal Studies) and seeks users' views on the issues raised in that review. After the consultation closes on 15 September, the Authority will summarise the responses and publish a report.

## **2. Understanding and accessing the data**

A full description of how consumer price indices are compiled is given in the [Consumer Price Indices Technical Manual \(674.4 Kb Pdf\)](#). This is supplemented by video, infographics and textual information available from the [guidance and methodology section](#) of our website.

A more detailed [quality report \(141.9 Kb Pdf\)](#) for this statistical bulletin is available. The report assesses consumer price inflation statistics against standard dimensions of quality such as relevance, accuracy and accessibility. The report was last updated in October 2013.

The [mini Triennial Review \(1.75 Mb Pdf\)](#) of the CPI and RPI Central Collection of Prices is available.

The most efficient way to access the latest consumer price inflation data and briefing on our website is via the CPI key figure on the [homepage](#).

In response to user feedback, all consumer price inflation data are available in 1 location. The [Consumer Price Inflation Reference Tables \(2.51 Mb Excel sheet\)](#) are provided via an Excel file.

To help users further, very detailed CPI data are now available including the [individual price quotes and item indices](#) that underpin the CPI. Please note, the data that are published are at a level which means that no individual retailer or service provider will be able to be identified. The data published covers January 1996 to March 2015. These data are updated once a quarter with around a 2-month lag with the latest CPI publication. For example, the data will next be

updated when the August CPI is published on 15 September 2015, at which point the detailed data published will be extended to June 2015.

Internationally, the CPI is known as the Harmonised Index of Consumer Prices (HICP). HICPs are calculated in each Member State of the European Union according to rules specified in a series of European regulations developed by the European Commission (Eurostat) in conjunction with the EU Member States. Eurostat releases figures for the Harmonised Index of Consumer Prices (HICP) for the month of June 2015 for EU Member States, together with an EU average, on 16 July 2015. A summary of the latest European data is available from [Eurostat's database tables](#). Further information on HICP for the European Union, Euro area and other EU Member States is available from [Eurostat's HICP web page](#).

### 3. Methods - CPI and other measures of inflation

The CPI, CPIH, RPIJ and RPI are compiled using the same underlying price data, based on a large and representative selection of around 700 individual goods and services for which price movements are measured in around 140 randomly selected areas throughout the UK. Around 180,000 separate price quotations are used every month to compile the indices. The outlets in which the prices are collected are selected randomly. Expenditure weights are held constant for 1 year at a time.

The selection of goods and services that are priced to compile these indices is reviewed annually. The contents of the 2015 basket are described in an article [Consumer Price Inflation: The 2015 Basket of Goods and Services \(139.4 Kb Pdf\)](#). The expenditure weights used to compile the indices are also updated each year. Additional details of the updated weights for 2015 are available in an article published on 24 March 2015 entitled [Consumer Price Inflation: 2015 Weights \(431.9 Kb Pdf\)](#).

Rates of change for the CPI and CPIH are calculated from unrounded index levels, rather than from the published indices which are rounded to 1 decimal place. The use of unrounded indices increases the accuracy of the calculation. The unrounded index levels for the CPI and CPIH are available from tables 64 and 65 of the [Consumer Price Inflation Reference Tables \(2.51 Mb Excel sheet\)](#). By contrast, rates of change for the RPI and RPIJ are calculated from the published rounded indices.

Further information on the methods used to construct the CPI, CPIH, RPI and RPIJ, including differences in the methods used for each index can be found in the [Consumer Price Indices Technical Manual \(674.4 Kb Pdf\)](#). [Users and uses of consumer price inflation statistics \(100.5 Kb Pdf\)](#) provides further details of how consumer price statistics are used more generally.

### 4. Revisions policy

On 15 October 2013, a [revisions policy \(49.6 Kb Pdf\)](#) was published for the suite of consumer price inflation statistics. The policy reaffirms the existing practices for CPI and RPI and sets out the policies for the new CPIH and RPIJ measures.

In summary, CPI, CPIH and RPIJ are revisable in theory though revisions only occur under exceptional circumstances. The RPI is never revised once published.

## 5. Publication policy

This bulletin includes the June 2015 data, collected on and around 9 June 2015. [Future publication dates](#) for this statistical bulletin are available to January 2017 (the publication of the December 2016 inflation figures). Publication dates from February 2016 onwards are provisional.

Details of the policy governing the release of new data are available from our Media Relations Office. Also available is a list of the names of those given [pre-release access](#) to the contents of this release.

In line with the Consumer Price Inflation Pre-Release arrangements, an advanced estimate of the CPI was provided to the Governor of the Bank of England and the Chancellor of the Exchequer 4 working days ahead of publication. The Governor shared this information with the MPC, and officials present at the MPC meeting, on Wednesday 8 July 2015. The pre-release access to the June CPI figures was extended to 4 working days from 3.5 working days due to the timing of the Monetary Policy Committee meeting being moved forward half a day.

Consumer price inflation for July 2014 to July 2015 will be published on 18 August 2015.

1 More detailed CPI, CPIH, RPI and RPIJ data are available at:  
<http://www.ons.gov.uk>

2 The National Statistics status of CPIH has been discontinued pending work to investigate and improve the method for measuring owner occupiers' housing costs in this index. The improvements from the resulting development work were introduced as part of the February 2015 dataset with the historical series revised back to 2005.

3 In accordance with the Statistics and Registration Service Act 2007, the Retail Prices Index and its derivatives have been assessed against the code of Practice for Official Statistics and found not to meet the required standards for designation as National Statistics. A full report can be found at: <http://www.statisticsauthority.gov.uk/>

<sup>1</sup> The National Statistics status of CPIH has been discontinued pending work to investigate and improve the method for measuring owner occupiers' housing costs in this index. The improvements from the resulting development work were introduced as part of the February 2015 dataset with the historical series revised back to 2005.
