

House Price Index, September 2015

Coverage: **UK**

Date: **17 November 2015**

Geographical Area: **Region**

Theme: **Economy**

Theme: **People and Places**

Main findings

- UK house prices increased by 6.1% in the year to September 2015, up from 5.5% in the year to August 2015.
- House price annual inflation was 6.4% in England, 1.1% in Wales, 1.1% in Scotland and 10.2% in Northern Ireland.
- Annual house price increases in England were driven by an annual increase in the East (8.4%) and the South East (7.4%).
- Excluding London and the South East, UK house prices increased by 5.0% in the 12 months to September 2015.
- On a seasonally adjusted basis, average house prices increased by 0.8% between August and September 2015.
- In September 2015, prices paid by first-time buyers were 4.3% higher on average than in September 2014.
- For owner-occupiers (existing owners), prices increased 6.9% for the same period.

About this statistical bulletin

The Office for National Statistics (ONS) House Price Index (HPI), previously published by the Department for Communities and Local Government (DCLG), is a monthly release that publishes figures for mix-adjusted average house prices and house price indices for the UK, its component countries and regions.

The index is calculated using mortgage financed transactions that are collected via the regulated mortgage survey by the Council of Mortgage Lenders. These cover the majority of mortgage lenders

in the UK. The HPI complements other measures of inflation published by us such as the consumer price indices, the producer price indices and the services producer price indices.

This statistical bulletin provides comprehensive information on the change in house prices on a monthly and annual basis. It also includes analysis by country, region, type of buyer (first-time buyers and former owner-occupiers) and type of dwelling (new dwelling or pre-owned dwelling). Historical series for all accompanying tables that transferred from DCLG are also available in the data section of this release.

The figures published in this release are not seasonally adjusted unless otherwise stated.

House price index UK summary

UK average house prices increased by 6.1% over the year to September 2015, up from 5.5% in the year to August 2015 (Figure 1). The average UK mix-adjusted house price in September 2015 was £286,000.

Table source: Office for National Statistics

Table notes:

1. Average house prices are not comparable between years as they reflect a different mix of houses being transacted. Indices have been chain linked so they are comparable year-on-year. For more information please see the re-weighting section in the background notes.
2. SA = Seasonally adjusted.
3. NSA = Not seasonally adjusted.
4. R = Data revised.

[XLS](#) [XLS format](#)

(39 Kb)

The main movements for each country are:

- the index for England reached a new record of 218.1 in September 2015 (Figure 4) – this is 0.2% above the previous record level witnessed in August 2015 (217.6) and 20.6% higher than the pre-economic downturn peak in January 2008 of 180.8
- the index for Wales in September 2015 (224.5) is slightly below the record level of 224.6 in January 2015 – house prices in Wales are 1.1% higher than the pre-economic downturn peak of January 2008 (222.1)
- the index for Scotland in September 2015 (233.9) is 3.8% below the record level witnessed in March 2015 (243.2) – Scotland prices are now 1.4% above the pre-economic downturn peak of June 2008 (230.6)
- the index for Northern Ireland in September 2015 (170.2) is 39.5% below the peak of August 2007 (281.5)

House price index by region

The pace of annual house price growth was again varied across the 9 English regions in September 2015 (Figure 5). The largest annual increase was in the East at 8.4% (down from 8.8% in the year to August 2015) followed by the South East (7.4% increase in the year to September 2015, unchanged from August). The North East had the lowest annual growth of the 9 regions, with prices increasing 1.8% in the year to September 2015 (down from 3.2%).

London prices increased by 7.2% over the year to September 2015 (up from 5.4% in the year to August 2015).

Excluding London and the South East, UK house prices increased by 5.0% over the year to September 2015, up from 4.8% in the year to August 2015.

Figure 5: All dwellings annual house price rates of change: UK, country and regions

Download chart[XLS](#) [XLS format](#)

(27.5 Kb)

This month, average house prices in 4 of the 9 English regions are at record levels (Figure 6). House prices in the North West, Yorkshire and The Humber, the East Midlands and the South East fell back slightly from the record levels witnessed in August 2015. The North East is the only English region yet to surpass its pre-economic downturn peak (prices in the North East remain 2.4% below the peak of January 2008).

The main regional price index movements for September 2015 are:

- the price index for the West Midlands reached a joint record level of 196.4 in September 2015 (also this level in July 2015) – this is 1.0% higher than August 2015 and 5.9% higher than the pre-economic downturn peak of October 2007 (185.4)
- the price index for the East reached a record level of 204.9 in September 2015 – this is up 0.9% from the previous record in August 2015 (203.0) and 21.7% higher than the pre-economic downturn peak in January 2008 (168.4)
- the price index for London is now 0.5% above the record level of 256.6 in August 2015 with an index of 257.9 in September 2015 – the London index is 47.8% higher than the pre-economic downturn peak in January 2008 (174.5)
- the price index for the South West reached a record level of 198.2 in September 2015 – this is up 0.1% from the previous record in August 2015 (198.1) and 9.7% higher than the pre-economic downturn peak in October 2007 (180.7)

Average house prices in countries and regions

Average mix-adjusted house prices in September 2015 stood at £299,000 in England, £175,000 in Wales, £199,000 in Scotland and £162,000 in Northern Ireland (Figure 7).

In September 2015, London continued to be the English region with the highest average house price at £531,000 and the North East had the lowest average house price at £158,000. London, the South East and the East all had prices higher than the UK average price of £286,000.

Excluding London and the South East, the average UK mix-adjusted house price was £218,000.

House price index by type of buyer

The average price for properties bought by first-time buyers increased by 4.3% over the year to September 2015, down from an increase of 4.5% in August 2015 (Figure 8). In September 2015, the average price paid for a house by a first-time buyer was £216,000.

The average price for properties bought by former owner-occupiers (existing owners) increased by 6.9% in the year to September 2015, up from an increase of 6.0% in August 2015. In September 2015, the average price paid for a house by a former owner-occupier was £335,000.

Development of a single, official house price index – progress update

The last progress update regarding the development of a single, official house price index was published in [July 2015](#).

Since the last update, there have been delays in securing access to the data required to begin test production of the new index, however, work is still progressing. Property attributes data from the Valuation Office Agency (the council tax valuation list) has been secured, along with historic data from the Land Registry. Analysis has been taking place to match these 2 sources of data and to provisionally begin refining the methodology for the [new house price index \(279.7 Kb Pdf\)](#). Corresponding data for Scotland is expected to be available shortly, which will enable the new methodology to be finalised and subsequently allow the test production of the new index to commence. Additional work is also taking place to quality assure these input datasets, and to finalise the data sharing agreements necessary to ensure the ongoing supply and use of the data.

The immediate focus of the development work will now be to finalise and test the new methodology followed by the publication of an article detailing the proposed new methodology for users. It is expected that the article will be published in late November 2015.

The development Working Group has also been considering the transition to the new house price index for users. Further details regarding the transition plan will be published in early 2016, and will likely include a number of user events to fully explain the changes ahead of the anticipated first publication of the new index by June 2016.

For further details, please contact hpi@ons.gsi.gov.uk

Economic context - September 2015

The UK House Price Index grew at an annual rate of 6.1% in the year to September, a 0.6 percentage point increase from August and the strongest rate of growth since March 2015. This pick-up in the annual rate came despite a slow-down in the monthly growth rate, which fell to 0.8% on a seasonally adjusted basis. The increase in the annual rate of price growth was partly driven by London, where prices grew by 7.2%, 1.8 percentage points above the growth in the year to August. An ongoing shortage of supply coupled with strengthening demand may be behind this increase in the growth rate.

A number of indicators suggest that the supply of housing remains weak across the UK, with the lack of homes available for sale increasing competition and supporting prices. The ONS [Output in the Construction Industry](#) release for September reported a 3.9% fall in new housing construction in the year to September. In the secondary market, the [Bank of England's Agents' Summary of Business Conditions for Q3](#) reported that weak activity could be self-perpetuating as potential vendors remain reluctant to put their homes on the market without suitable properties available for purchase. The [Royal Institute of Chartered Surveyors' Residential Market Survey for September](#) supported this view, suggesting the biggest factor in the record low stock of homes available for sale is deterring would-be sellers from putting their homes on the market.

While the supply of housing remains tight, demand continues to grow. The [Bank of England's November Inflation Report](#) stated that housing demand remains strong, which should be reflected in an increase in [mortgage approvals](#). Indeed, the volume of mortgage approvals grew by 3.9% in Q3 2015 to reach its highest level since the first quarter of 2014. Mirroring this increase in demand, [UK home sales](#) continued to pick-up despite the shortage of supply, and in the three months to September (Jul-Sep) were 4.4% higher than in the preceding three months (Apr-Jun).

Broader economic indicators suggest that the economy has continued to grow relatively strongly over recent periods, with [output now increasing](#) at a rate similar to its pre-downturn trend. [Labour market conditions](#) have continued to strengthen, as unemployment fell to 5.3% for July to September 2015 and annual regular pay grew by 2.5%. These improvements, along with a [resurgence in job-to-job moves](#) and broader evidence of [tightening](#), suggest that confidence in labour market outcomes remains high. However, despite the strengthening in nominal pay growth over the past year and [low inflation](#), house price growth continues to outpace real earnings growth.

Data tables

The [HPI monthly and quarterly reference table \(3.67 Mb Excel sheet\)](#) provides full historical series for the monthly tables accompanying the house price index statistical bulletin. This month, Tables 1 to 9 have been updated with the latest monthly estimates for September 2015. The seasonally adjusted figures in Table 7 have been revised this month as scheduled. This month, Tables 10 to 19 have been updated with the latest data for the third quarter of 2015.

The [HPI annual reference table \(1.19 Mb Excel sheet\)](#) contains all the annual live tables. No annual tables have been updated this month. The next set of updates to annual tables will be in March 2016.

The [HPI weights summary reference table \(83.5 Kb Excel sheet\)](#) provides a summary of the aggregated mix-adjustment weights used in the production of the HPI for the period 2007 to 2015. The mix-adjustment weights are updated in the February HPI each year.

How are we doing?

We would welcome your views on the data presented in this statistical bulletin. Please contact the house price index team using the email address below to discuss any aspect of the data, including your views on how we can improve the data.

hpi@ons.gsi.gov.uk

Background notes

1. New this month

New house price data for September 2015 are published this month. The [monthly and quarterly reference table \(3.67 Mb Excel sheet\)](#) has been updated to include data for September 2015 and the third quarter (July to September) of 2015.

Revisions this month

July and August 2015 data have been revised this month to incorporate transactions from those lenders that provide data on a quarterly basis. There are small revisions to the seasonally adjusted series for the last 12 months, which are expected from the monthly seasonal adjustment process.

Revisions next month

No revisions are expected for the October 2015 HPI, apart from the normal revisions to the latest 12 months that follow the monthly seasonal adjustment process.

2. Relevance of the ONS House Price Index

The ONS HPI is an important measure of house price inflation for the UK and together with the Land Registry HPI, it is one of the main house price indices used by central and local government to support decision making in the UK. Other users include private individuals, surveyors and analysts in financial institutions.

The ONS HPI is also an important input into the housing cost component of RPIJ and RPI retail price indices. Each month a customised HPI delivery is produced using a sub-sample of the full data set for use in RPIJ and RPI.

3. Revisions policy

At the end of every quarter, as well as releasing final figures for the latest month, we revise the figures from the previous 2 months. This is done because some mortgage lenders, which account for 1 to 2% of all records, provide their data on a quarterly rather than monthly basis.

Additionally, data will be revised for the previous month if more than 1,000 additional cases are received in a subsequent month.

In July 2013, the methodology used to seasonally adjust the HPI was updated following a review and brings the HPI in line with our best practice for seasonal adjustment. Seasonal factors are now estimated on a monthly basis and therefore may result in small revisions to the previous 12 months data. This updated process improves the accuracy of the seasonally adjusted figures.

Other revisions to historical data (other than those currently due for revision) will be made only if the revision is substantial.

In all cases, the revised figures are labelled with an "R" and the reason for the revision explained under the "New this month" section of the background notes.

4. Methodology

Data sources

Since October 2005 the ONS HPI (formerly the DCLG HPI) has been based on a sample of mortgage completions data from the Regulated Mortgage Survey (RMS) as collected by the Council of Mortgage Lenders (CML).

The number of transactions received from the RMS is affected by the total number of mortgages completed for house purchase in any period. During 2011 the sample covered 65 to 70% of all UK mortgage completions.

Quality

A [Quality and Methodology Information \(QMI\) \(131.8 Kb Pdf\)](#) paper for the HPI describes in detail the intended uses of the statistics presented in this publication, their general quality and the methods used to produce them.

Price methodology

The ONS HPI is mix-adjusted to allow for differences between houses sold (for example type, number of rooms, location) in different months within a year. House prices are modelled using a combination of characteristics to produce a model containing around 100,000 cells (one such cell could be first-time buyer, old dwelling, 1 bedroom flat purchased in London). Each month estimated prices for all cells are produced by the model and then combined with their appropriate weight to produce mix-adjusted average prices. The index values are based on growth rates in the mix-adjusted average house prices and are annually chain linked. More information on the model used is available via the [hedonic model methodology paper \(246.4 Kb Pdf\)](#) published on the [HPI user guidance webpage](#).

Re-weighting

The ONS HPI is a weighted Laspeyres-type index. In January of each year the index weights are updated based on the relative numbers of transactions during the previous 3 years, which are grossed to total transactions obtained from Land Registry. Applying new weights ensures that the index keeps up to date with changes in the types of properties that are being purchased, and therefore reflects the price of the average property. A high level summary of the weights used in the calculation of the ONS HPI can be found in the [HPI weights summary reference table \(79.5 Kb Excel sheet\)](#).

One consequence of changing the weights every year is that the mix-adjusted house prices cannot be compared between years as the weights are different. The index itself is constructed on a chain-linked basis, which enables year-on-year comparisons to be made. This means that the year-on-year change in the index for June 2011, say, is effectively the change in the average price from June to January 2011 (using the weights for 2010) combined with the change in the average price from January to June 2011 using the weights for 2011. Therefore, the year-on-year change in the index is not the same as the year-on-year change in the mix-adjusted average price. More information on the [HPI methodology](#) is available on the [GOV.UK](#) website.

Seasonal adjustment

The housing market shows seasonal effects that affect house prices. For example, prices have tended to be higher during the summer months than during the winter months. These seasonal effects are estimated and adjusted for in order to calculate month-on-month price changes. Seasonally adjusted figures are provided at a national level in Table 7 alongside the non-seasonally adjusted figures of the other tables. Seasonal adjustment is performed each month and reviewed each year, using the standard and widely used software X-13-ARIMA. Seasonally adjusted house price estimates are used to report monthly percentage changes. All other figures such as annual rates of change and average house prices are based on non-seasonally adjusted estimates, unless otherwise stated.

5. Other house price statistics

Currently there are a number of different sources of house price statistics published in addition to the ONS HPI. There will be differences in the data published by each source as there are

differences in both the data and methodology used. Therefore the ONS HPI is not directly comparable with these other indicators. Further details on the differences between official house price statistics can be found in the article [Official House Price Statistics Explained \(974.4 Kb Pdf\)](#).

Land Registry house price index

All residential property transactions in England and Wales are recorded by Land Registry. These transactions are used for calculating the Land Registry index. This index is based on repeat-sales regression, which calculates the change in price of any property transacted twice since 1995. Therefore new build properties are excluded from the index. Land Registry publishes indices at a sub-regional level. The Land Registry HPI is normally published on the 20th working day of every month, and refers to all transactions of the preceding month.

The Land Registry HPI can be accessed via the [Land Registry's website](#).

Registers of Scotland official quarterly housing market statistics

Registers of Scotland records all the property transactions in Scotland. It produces average house prices based on arithmetic means of these transactions, which is published as the [quarterly housing market statistics](#) in the second month after the month to which the figures refer to.

Northern Ireland residential property price index

The Land and Property Services assisted by the Northern Ireland Statistics and Research Agency (NISRA) publish a [quarterly residential property prices index \(RPPI\) for Northern Ireland](#). The index measures change in the price of residential property sales recorded by Her Majesty's Revenue and Customs. This is a new official statistic, first published in quarter 1 of 2012.

Halifax house price index and Nationwide house price index

Both [Halifax](#) and [Nationwide](#) produce house price indices based on their own mortgage approvals only and therefore, like the ONS HPI, will not include any cash transactions. They both have UK-wide coverage, and since the Halifax and Nationwide use only their own in-house data they can process them immediately and do not have to await the receipt of data from other lenders. This means that they are more timely than the ONS HPI.

LSL Acadata house price index

The LSL Acadata (previously the LSL Property Services/Acadametrics) HPI is the only house price index to reflect all transactions, as opposed to data samples, and provides mix and seasonally adjusted results at national, regional and county or unitary district or London borough levels. The index can be accessed at [Acadata](#).

6. Accessibility

This bulletin includes the September 2015 data. Future publication dates for this statistical bulletin are available via the release calendar.

7. General

Details of the policy governing the release of new data are available from the Media Relations Office. Also available is a list of the names of those given [pre-release access](#) to the contents of this release.
