

# Output in the Construction Industry, December 2015 and Quarter 4 (Oct to Dec) 2015

Coverage: **GB**

Date: **12 February 2016**

Geographical Areas: **GB, Region**

Theme: **Economy**

Theme: **Business and Energy**

## Main points

- In Quarter 4 (Oct to Dec) 2015, output in the construction industry was estimated to have decreased by 0.4% compared with Quarter 3 (July to Sept) 2015. This is a downward revision of 0.3 percentage points from the estimate included in the preliminary estimate of gross domestic product (GDP) published on 28 January 2016.
- Downward pressure on the quarter came from repair and maintenance (R and M) which decreased by 1.4%. This was offset by an increase of 0.2% in all new work.
- Between Quarter 4 (Oct to Dec) 2015 and Quarter 4 (Oct to Dec) 2014, output was estimated to have increased by 0.4%.
- In December 2015, output in the construction industry was estimated to have increased by 1.5% compared with November 2015 due to an increase of 2.6% in all new work. This was offset by repair and maintenance which decreased by 0.5%.
- When comparing the annual 2015 data with 2014, output in the construction industry was estimated to have increased by 3.4%. All new work increased by 6.8% while repair and maintenance decreased by 2.2%.
- The preliminary estimate of gross domestic product (GDP) for Quarter 4 (Oct to Dec) 2015 published on 28 January 2016 contained a forecast for construction output of a fall of 0.1%. This estimate has been revised within this release based upon updated survey responses; output is

now estimated to have decreased by 0.4%. This downward revision to construction output has no impact to 1 decimal place on GDP growth.

- The release for December 2015 has a revision period back to January 2015. Revisions in this release were caused by the incorporation of late data. More information on revisions can be found in the background notes.

## About this release

Output is defined as the amount charged by construction companies to customers for the value of work (produced during the reporting period) excluding VAT and payments to sub-contractors.

Construction output estimates are a short-term indicator of construction output by the private sector and public corporations within Great Britain and are produced from a monthly survey of 8,000 businesses in Great Britain. The estimates are produced and published at current prices (including inflationary price effects) and at chained volume estimates (with inflationary effects removed) both seasonally adjusted and non-seasonally adjusted.

Chained volume measures are also described as volume. Construction output is used in the compilation of the output approach to measuring [gross domestic product \(GDP\)](#).

Detailed estimates along with a longer run of time series data are available to download in the Output in the Construction Industry, December 2015 reference tables. In these tables, users will find chained volume estimates back to Quarter 1 (Jan to Mar) 1997, and monthly estimates back to January 2010. Current price non-seasonally adjusted data are available back to Quarter 1 (Jan to Mar) 1955. More information on these statistics can be found in the "[Definitions and explanations](#)" article.

The data published in this release cover construction estimates for Great Britain. Construction output estimates for Northern Ireland can be obtained from the [Central Survey Unit](#).

## National Statistics status

On 11 December 2014 the UK Statistics Authority announced its decision to suspend the designation of [Construction Price and Cost Indices](#) due to concerns about the quality of these deflators. As a result the UK Statistics Authority announced its decision to suspend the designation of Output and New Orders as National Statistics in respect of the Code of Practice for Official Statistics.

We took responsibility for the publication of the Construction Price and Cost indices from the Department of Business Innovation and Skills (BIS) on 1 April 2015. Since this point we have worked towards creating an interim solution to measure output prices and replace the statistical models that had been used in the production of chained volume measures (CVMs) for output in the construction industry since Quarter 3 (July to Sept) 2014 and to provide an ongoing source of data from Quarter 1 (Jan to Mar) 2014 onwards. This [interim solution](#) was included in the data published in June 2015 for all periods from January 2014 onwards.

A [work plan](#) for the development of construction price statistics was published on 11 December 2015 on our website and provides information on both our research into nominal data as well as construction price statistics.

## Output in the Construction Industry – Quarter 4 (Oct to Dec) 2015

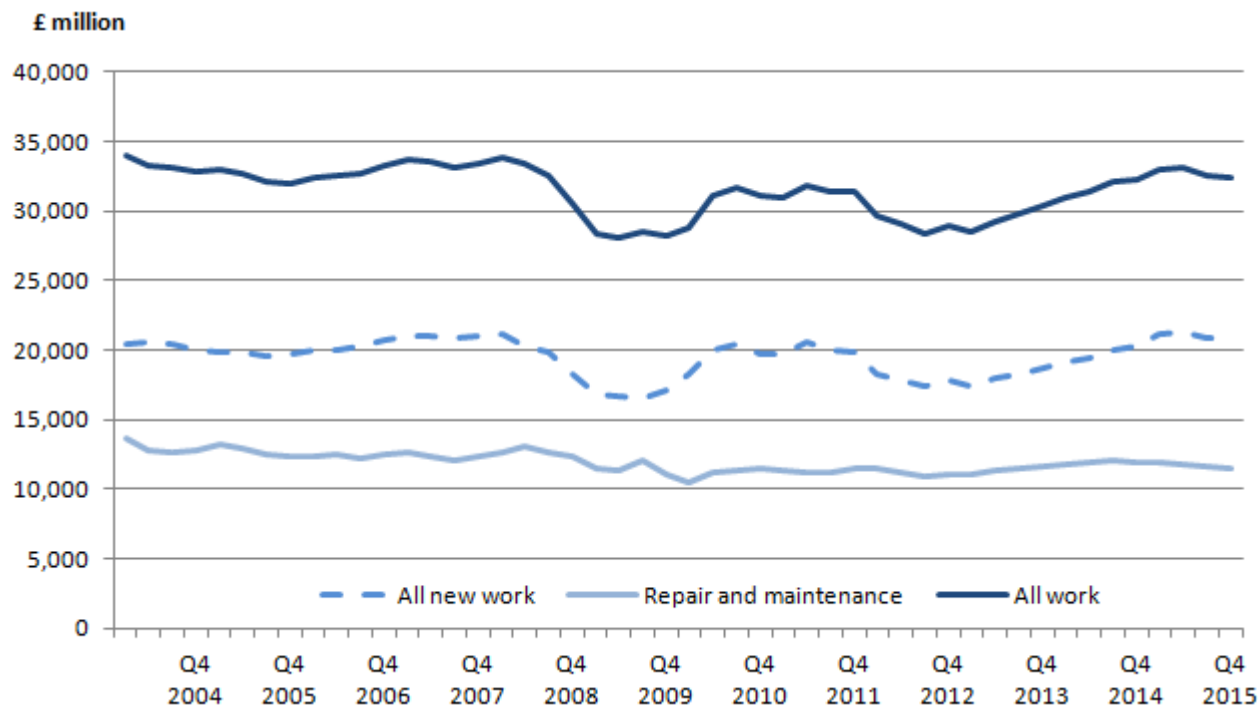

### All work

In Quarter 4 (Oct to Dec) 2015 all work:

- decreased by 0.4% compared with Quarter 3 (July to Sept) 2015
- increased by 0.4% compared with Quarter 4 (Oct to Dec) 2014

### Figure 1: All Work – quarterly time series chained volume measure, seasonally adjusted, £ million

Figure 1 shows the 2 main components of all work. The chart shows the fall in Quarter 4 (Oct to Dec) 2015 of 0.4% in all work compared with Quarter 3 (July to Sept) 2015 was caused by a decrease in repair and maintenance of 1.4%. All new work increased by 0.2%. All work increased by 0.4% in Quarter 4 (Oct to Dec) 2015 compared with the same period last year and is the lowest year-on-year increase since Quarter 1 (Jan to Mar) 2013 when it fell by 4.3%. All new

work increased by 2.8% compared with the same period last year while repair and maintenance decreased by 3.7%.

Figure 2 looks at the main components of all new work. After sustained growth in new housing from Quarter 2 (Apr to June) 2013 to Quarter 2 (Apr to June) 2015, there was a fall in Quarter 3 (July to Sept) 2015 of 5.7%, followed by a return to growth in Quarter 4 (Oct to Dec) 2015 of 4.1%. In Quarter 4 (Oct to Dec) 2015, infrastructure reported a fall of 3.9% and was at its lowest level since Quarter 4 (Oct to Dec) 2014. Other new work continued to fall into Quarter 4 (Oct to Dec) 2015 and was at its lowest level since Quarter 1 (Jan to Mar) 2014.

Figure 3 looks at the main components of repair and maintenance. In Quarter 4 (Oct to Dec) 2015, all repair and maintenance decreased for the fifth consecutive quarter, falling by 1.4%. Housing repair and maintenance decreased by 3.3% in Quarter 4 (Oct to Dec) 2015 while non-housing repair and maintenance increased by 0.7%. On the year, repair and maintenance fell by 3.7%. Non-housing repair and maintenance was the main contributor falling by 6.2%, while housing repair and maintenance fell by 1.1%.

**Table 1: Component comparison to previous levels, chained volume measure, seasonally adjusted**

UK

	Current volume £million	Lowest volume £million	Date	Highest volume £million	Date	Percentage change from lowest volume (%)	Percentage change from highest volume (%)
New housing							
Public	1,127	296	1999 Q2	1,495	2014 Q3	280.7	-24.6
Private	6,041	3,017	2009 Q3	6,146	2006 Q4	100.2	-1.7

## Contributions to growth quarterly

### Figure 4: Contributions to quarter-on-quarter volume growth from the main construction sectors

Great Britain, Quarter 4 (Oct to Dec) 2015 compared with Quarter 3 (July to Sept) 2015

Source: Construction: Output & Employment - Office for National Statistics

#### Download chart

[XLS](#) [XLS format](#)  
(18.5 Kb)

Figure 4 shows the contribution of each sector to output growth in the construction industry between Quarter 3 (July to Sept) 2015 and Quarter 4 (Oct to Dec) 2015. In Quarter 4 (Oct to Dec) 2015, all work types except total housing, private commercial and non-housing repair and maintenance saw decreases in output. The largest downwards contribution came from housing repair and maintenance.

## December 2015

### All work

In December 2015 all work:

- increased by 1.5% compared with November 2015
- increased by 0.5% compared with December 2014

### Figure 5: All Work – monthly time series, chained volume measure, seasonally adjusted, index (2012 = 100)

Great Britain, December 2015

[XLS](#) [XLS format](#)

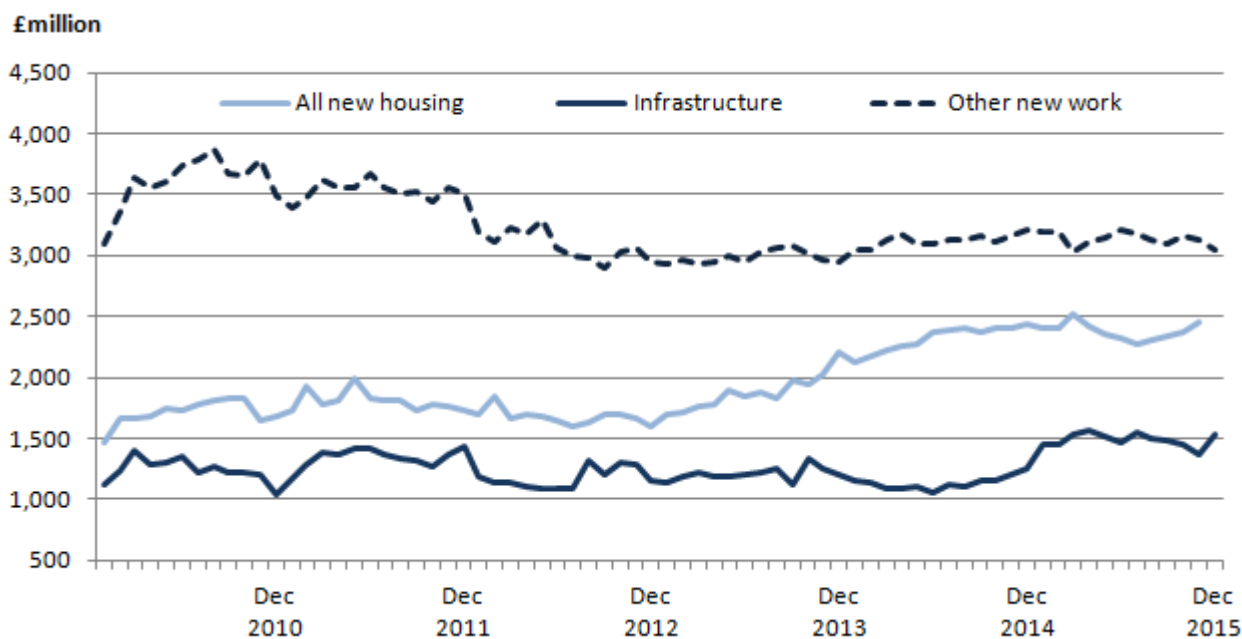

(31 Kb)

Figure 5 shows the 2 main components of all work. The chart shows that since the series began in January 2010 the monthly path has been volatile. The early period shows that after a rise in output in early 2010, the level remained fairly consistent until late 2011 when output started to fall. Output increased steadily in 2013 and 2014 with all new work, and repair and maintenance performing at a similar level, however, in late 2014 the 2 components started to move in opposite directions. In December 2015, all work increased by 1.5% compared with November 2015. The main contributor was all new work which increased by 2.5% while repair and maintenance decreased by 0.5%.

### Download chart

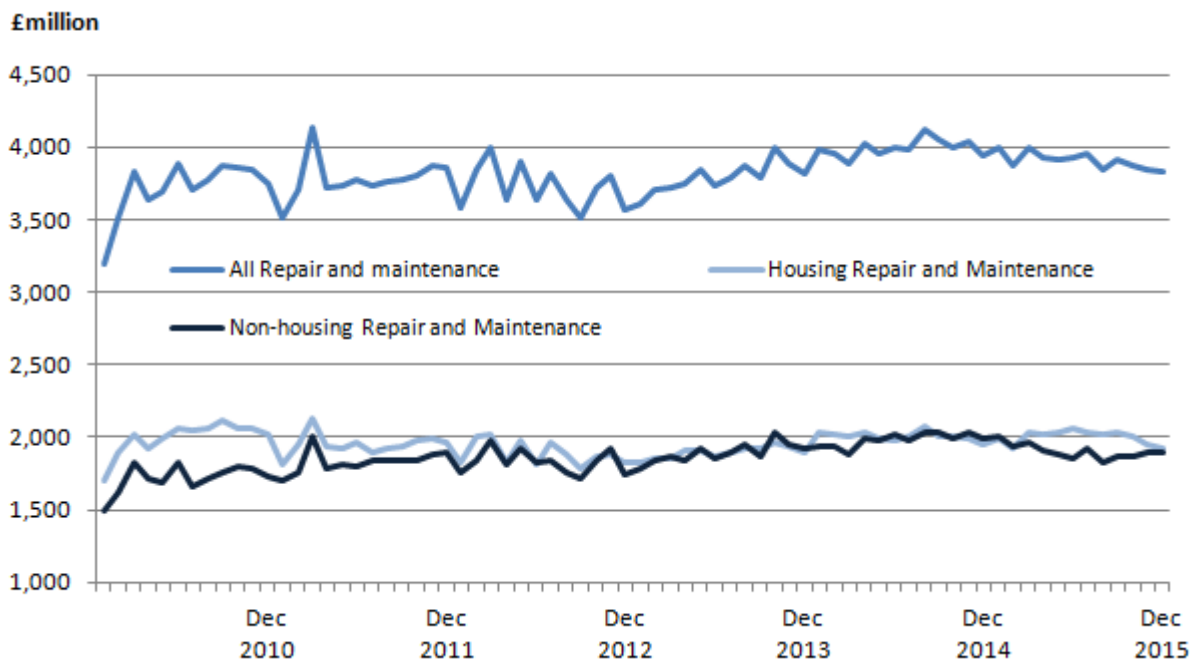

[XLS](#) [XLS format](#)

(31 Kb)

Figure 6 looks at the main components of all new work. There was sustained growth in new housing from early 2013 to late 2014, however, there has been a mixed picture in 2015 with weakness between May 2015 and August 2015 followed by a return to growth from September 2015 to December 2015. Infrastructure continues to be volatile in 2015 but showed strong growth into December 2015, with an increase of 12.0% compared with November 2015, the highest month on month increase since January 2015. Other new work has been fairly flat since the end of 2012. In more recent periods there have been falls in 5 of the last 6 months, with December 2015 reporting a fall of 2.4% compared with November 2015, the largest month-on-month fall since March 2015.

**Figure 7: Components of all repair and maintenance, monthly time series, chained volume measure, seasonally adjusted £ million**

Great Britain, December 2015

### Download chart

[XLS](#) [XLS format](#)

(31 Kb)

Figure 7 looks at the 2 main components of repair and maintenance. The level of both housing and non-housing repair and maintenance has been fairly consistent since 2010. In December 2015, housing repair and maintenance fell by 1.3% compared with November 2015, while there was an increase in non-housing repair and maintenance of 0.4% over the same period.

### Summary of growth rates for all work types

Table 2 provides a summary of growth rates across the different types of construction work in December 2015. Some main points from this table are as follows

- there were month-on-month increases in all work types except private industrial, private commercial and private housing repair and maintenance
- the year-on-year increase in all work was due to all new work; within all new work all work types except public new housing, public other new work and private commercial work reported increases
- all work types within repair and maintenance reported year-on-year decreases

**Table 2: Construction output summary tables, chained volume measures, seasonally adjusted**

Great Britain, December 2015

	Percentage change (%)					Most recent level (£m)
	Most recent 3 months on a year earlier	Most recent 3 months on 3 months earlier	Most recent month on the same month a year ago	Most recent month on the previous month

Download chart

[XLS](#) [XLS format](#)  
(18.5 Kb)

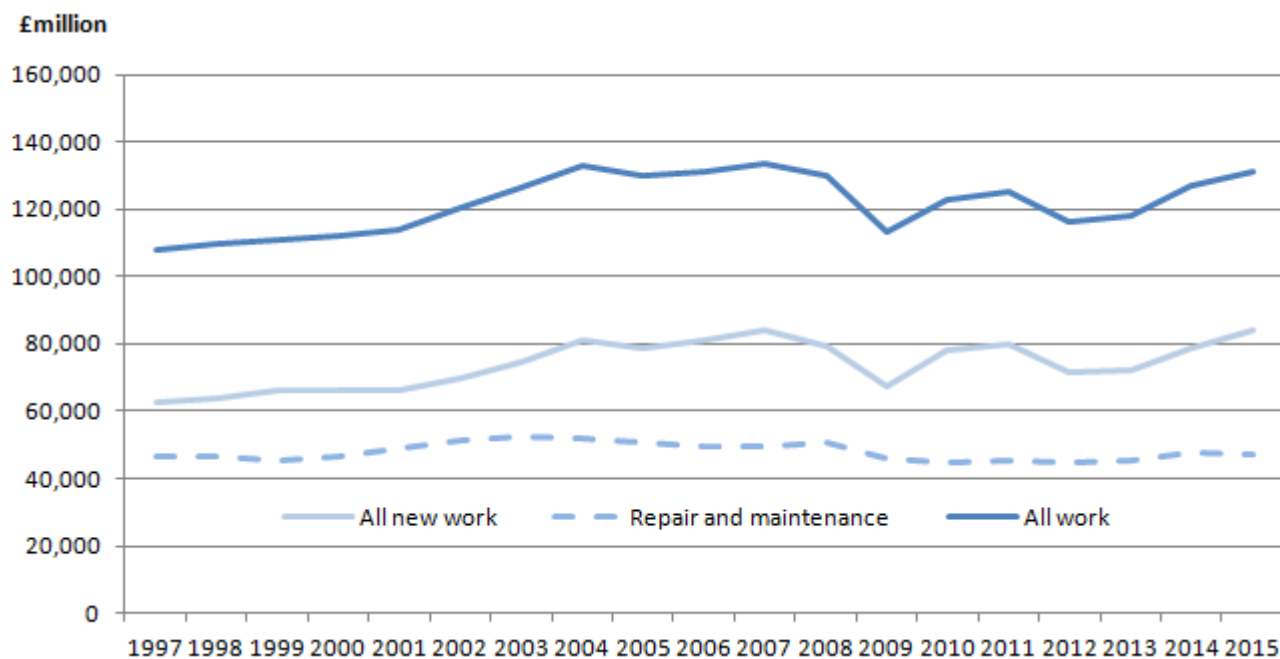

Figure 8 shows the contribution of each sector to output growth in the construction industry between November 2015 and December 2015. In December 2015, all work types except total housing repair and maintenance, private commercial and private industrial saw increases in output. The largest upwards contribution came from infrastructure.

## Analysis of 2015

Output in the construction industry grew by 3.4% in 2015 compared with 2014. The level of all work remained 2.0% below its peak in 2007.

**Figure 9: All work, all new work and repair and maintenance, annual time series, chained volume measure, seasonally adjusted, £million**

Great Britain, 1997 to 2015

### Download chart

[XLS](#) [XLS format](#)

(26 Kb)

Figure 9 shows that the increase in all work in 2015 was caused by an increase in all new work, which increased by 6.8% compared with 2014. This was offset by repair and maintenance which fell by 2.2% and is the largest year-on-year decrease since 2010 when it decreased by 3.1%.

## The quality of the estimate of Output in the Construction Industry

Output in the Construction industry estimates are produced from the Monthly Business Survey on the second Friday of the month, 2 months after the reporting month. Revised results, for previously published periods, are published in line with the national accounts revisions policy. More information about the data content for this release can be found in the background notes.

Revisions are an inevitable consequence of the trade-off between timeliness and accuracy. The response rate in December 2015 was 71.5% of questionnaires, accounting for 75.4% of registered turnover in the construction industry. Therefore the estimate is subject to revisions as more data become available.

The monthly output in the construction industry time series now spans 72 months, however, users should note that 60 months is the minimum time span recommended by Eurostat for seasonal

adjustment. While the seasonal pattern is generally established after 60 months in a monthly time series, there is still potential for increased revisions until the seasonal pattern has matured.

All estimates, by definition, are subject to statistical uncertainty and for many well-established statistics we measure and publish the sampling error associated with the estimate, using this as an indicator of accuracy. For construction output we publish sample and non-sample errors in Table 11 of the main reference tables. It should be noted that we are continually working on methodological changes to improve the accuracy of the construction output estimates. Progress on these can be found on the [ONS continuous improvement](#) page on our website.

A close investigation of the sampling methods used during the production of the figures for the output in the construction industry release showed that the parameters used in the treatment of outliers resulted in more outliers being detected in the first 4 months of the year (January, February, March and April) than at any other point. In reviewing this, we found that this outlier treatment could be improved. This led to revisions across these 4 months in the estimates published by us on 11 December 2015. Additionally, we incorporated the results of a seasonal adjustment review which also contributed to revisions in the data. Implementation of these improvements has resulted in an inconsistency between the annual non-seasonally adjusted and seasonally adjusted data. This is currently being reviewed.

## Construction estimates in gross domestic product

Construction estimates are a main component of the output approach to measuring GDP along with the estimates of services, production and agriculture. As an aid to users, the short-term economic indicator releases that directly feed into GDP include an additional table of the GDP components. It is anticipated that this table will inform users of the relationship between the individual components which comprise GDP output. The publication dates and the quarterly growths of the individual GDP components are shown below.

Each component of GDP has a weight within GDP based on its value in 2012. Construction has a weight of 59, which means that it is 59 parts of the 1,000 that make up total GDP.

To determine the effect each component has on GDP multiply the component growth by its weight in GDP.

An example using Quarter 2 (Apr to June) 2015 data:

Construction growth = 1.4

Weight in GDP = 0.059 (59/1000)

Effect on GDP =  $1.4 * 0.059 = 0.08$  or 0.1 to 1 decimal place (dp).

Revisions to components and the effect on GDP can be calculated using the same process. As a general rule there are no revisions to GDP when the component revisions are:

Index of Production (IoP) = between 0.3 and -0.3

Construction = between 0.9 and -0.9

Index of Services (IoS) = 0.0 (all values above or below 0.0 effect GDP due to the high weight of IoS in GDP).

Because;

$$\text{IoP} = 0.148 \times 0.4 = 0.0592 \text{ or } 0.1 \text{ to } 1 \text{ dp}$$

$$\text{Construction} = 0.059 \times 0.9 = 0.0531 \text{ or } 0.1 \text{ to } 1 \text{ dp}$$

$$\text{IoS} = 0.786 \times 0.1 = 0.0786 \text{ or } 0.1 \text{ to } 1 \text{ dp}$$

Table 3 shows the latest monthly and revised quarterly output figures that fed into the GDP Preliminary Estimate release for Quarter 4 (Oct to Dec) 2015 published on 28 January 2016.

**Table 3: GDP component tables, chained volume measures, seasonally adjusted**

UK

Publication	Weight in GDP (%)	Publication date	Percentage change (%)		
			Latest periods	Most recent period on a year earlier	Most recent period on the previous period
GDP	100.0	28 Jan	Q4 2015	1.9	0.5
			Q3 2015	2.1	0.4
Index of Production	14.9	10 Feb	Q4 2015	0.6	-0.5
			Q3 2015	1.2	0.1
Construction output	5.9	12 Feb	Q4 2015	0.4	-0.4
			Q3 2015	1.4	-1.7

			Q3 2015	2.4	0.6
Agriculture	0.7	28 Jan	Q4 2015	-1.8	0.6
			Q3 2015	-0.1	0.2

**Table source:** Office for National Statistics

## Download table

**XLS** [XLS format](#)

(29 Kb)

The Quarterly National Accounts published on 28 January 2016 contained an estimate for quarterly construction of a decrease of 0.1%. This estimate has been revised within this release based upon updated survey responses and is now estimated to have decreased by 0.4%.

## Economic context

On the month, construction output increased by 1.5% in December 2015, the fastest rate seen since April 2015. This followed a 1.1% contraction in November and 0.4% growth in October, resulting in a slight contraction (-0.4%) in output over the fourth quarter (Oct to Dec) of 2015.

The biggest contribution to the rise in output in December 2015 came primarily from growth in infrastructure, supplying a greater contribution to total growth than the other work types combined. Infrastructure increased by 12.0% on the month, the first positive increase since July 2015, which has resulted in output moving back to levels seen around the middle of 2015. New housing work, both public and private, made the next highest contributions to growth, increasing by 11.3% and 2.4% respectively. This was partially offset by a poorer performance in private industrial and commercial work types (other than infrastructure); output declined in these categories by 6.6% (the third successive month of contraction) and 2.9% over the month respectively.

Comparing December 2015 with December 2014, output increased by 0.5%, while the rate of construction output growth for the 2015 calendar year as a whole was 3.4%, lower than the historically strong growth of 7.5% seen in 2014, but above the pre-downturn average rate of growth. The largest increases over the calendar year came from infrastructure (22.7%) and private housing (7.4%). The largest contractions over the year were in public housing (-16.8%), non-infrastructure private commercial work (-7%) and non-housing repair and maintenance (-4.9%).

Over a longer time period it is clear that the construction of new housing has performed better than the majority of the remaining construction industry. Compared with levels seen prior to the downturn in Quarter 1 (Jan to Mar) 2008, new housing work has increased by 16.2% while the construction industry as a whole has fallen by 4.1%. However, much of this increase occurred in 2014; calendar year growth in new housing was 25.5% and has slowed since to just 3.7% in 2015. This is set against a backdrop of continued house price inflation – the [ONS House Price Index](#) indicates an increase in prices of 7.7% in the year to November 2015, while the average of the [Halifax](#) and [Nationwide](#) measures of house prices show an increase of 7.2% in the year to Quarter 4 (Oct to Dec) 2015. House price growth has coincided with an 11.6% rise in residential property transactions according to [HM Revenue and Customs data](#).

## International perspective

Output in the construction industry follows the [Eurostat Short Term Statistics \(STS\)](#) regulation for production in construction. Before any comparisons are made with the euro area or EU28, it is

worth noting that the UK is the only member state to follow the A method for compiling [production in construction statistics](#).

The latest release of [production in construction](#) showed that construction output in the euro area (EA19) increased by 0.8% and by 0.7% in the EU28 in November 2015 compared with October 2015. The Great Britain estimate for November 2015 showed that construction output decreased by 1.1%. It should be noted that an accurate comparison cannot be made as Eurostat data are calculated on a 2010 = 100 basis, while Great Britain data are calculated on a 2012 = 100 basis.

Outside of the EU, the US Census Bureau release [Value of construction put in place](#) published on 1 February 2016, showed provisional estimates of construction output increased by 0.1% in December 2015 compared with November 2015 and increased by 8.2% compared with December 2014.

## International comparisons

International construction comparisons are compiled by Eurostat. The estimates produced in this bulletin are included in these comparisons. Further information can be found on the [Eurostat](#) web page.

## Background notes

### 1. Future improvements

As described in [Improving the Coverage of the Standard Business Survey Population](#) published on 21 December 2015, the coverage of our Standard Business Survey Population has been extended to include a population of solely PAYE-based businesses.

### 2. Statistical continuous improvement

In March 2012, as part of our [Statistical Continuous Improvement programme](#), we published a [Review of Sample Design and Estimation Methodology for Construction Output](#). This report evaluated the sample design and estimation methods used on the Construction Output Survey. The conclusions of the review were that the current sample is performing well and that the current methodology for estimation within the survey produces the smallest standard error.

In response to user feedback and in line with the announcement made in the article ["Improvements to the methods used to compile Output in the Construction Industry statistics"](#), this statistical bulletin now contains monthly seasonally adjusted chained volume estimates. Due to the potential for confusion when comparing constant price (volume) and chained volume measures, all references to constant price series for construction output have been removed from this, and future bulletins.

### 3. Understanding the data

#### I. Interpreting the data

When making comparisons it is recommended that users focus on chained volume measures or constant price (volume), seasonally adjusted estimates as these show underlying movements rather than seasonal movements.

Construction output estimates are subject to revision because of:

- late responses to the Construction Output Survey
- revisions to seasonally adjusted factors which are re-estimated every quarter
- annual updating of the Inter-Departmental Business Register (IDBR) that forms the basis of the sampling for the Construction Output Survey - this occurs in April and can have an effect on the results published in May

## II. Definitions and explanations

[Definitions of terminology](#) found within the main statistical bulletin are available on our website.

### 4. Use of the data

Output in the Construction Industry estimates are widely used both internally and externally and have been identified by legal requirement and user engagement surveys.

The main users of data from the Output of the Construction Industry dataset are:

- UK National Accounts
- Eurostat, the statistical office of the European Union, in order to comply with statutory legislation on short-term business statistics (STS) - short-term business statistics provide information on the economic development of four major domains: industry, construction, retail trade and other services
- industry analysts requiring estimates of the construction industry output of Great Britain
- trade associations making UK and international comparisons and to forecast trends in the construction industry
- other government departments including; the Department for Business, Innovation and Skills (BIS), HM Treasury (HMT), Department for Communities and Local Government (DCLG) and the Office for Budgetary Responsibility (OBR)

As well as being a main indicator of the performance of construction companies, the results of the survey also contribute to the estimate of the gross domestic product of the UK, contributing approximately 5.9% of GDP.

More information on the uses made of [short-term economic statistics](#) is available on our website.

### 5. Methods

Our Monthly Construction output survey measures output from the construction industry in Great Britain. It samples 8,000 businesses, with all businesses employing over 100 people or with an annual turnover of more than £60 million receiving a questionnaire by post every month.

Estimates are based on output data collected through the monthly construction output survey. Response rates at the time of publication are included for the current month, and the 3 months prior. The response rates for those historical periods are updated to reflect the current level of response, incorporating data from late returns. There are 2 response rates included, with 1 percentage for the amount of turnover returned, and the other percentage for the amount of questionnaire forms.

**Table 4: Overall response rates (%)**

Great Britain, September 2015 to December 2015

Year	Period	Turnover	Questionnaire
2015	December	75.4	71.5
	November	90.0	75.8
	October	89.1	79.0
	September	92.1	78.6

#### Download table

 [XLS format](#)  
(24 Kb)

#### 6. Quality

The latest [Quality and Methodology report for the Output of the Construction Industry estimates](#) can be found on our website.

#### 7. Revision policy

Construction output conforms to the standard [National Accounts revision policy](#), which can be found on our website. In line with this, the construction output release for December 2015 has revisions back to January 2015.

Figures for the most recent months are provisional and subject to revision in light of (a) late responses to the Monthly Business Survey MBS and (b) revisions to seasonal adjustment factors which are re-estimated every period.

#### 8. Revisions

One indication of the reliability of the main indicators can be obtained by monitoring the size of revisions. Analysis of the previously published quarterly seasonally adjusted chained volume measure series has shown that revisions to construction data are small. Generally these quarterly revisions are less than 1 percentage point when compared with the final revised period 5 quarters after initial publication. This indicates that the published estimates are a reliable snapshot of the output in the industry at the date of publication.

The size and pattern of revisions for both output and new orders data which have occurred in the open period can be found in the new revision triangles on the construction web page. Please note that these indicators only report summary measures for revisions. The revised data may be subject to sampling or other sources of error. Details about this revisions material can be found in the document "[Revisions information in ONS First Release](#)".

It should be noted that due to seasonal adjustment taking place on a short span of data points used to interpret the seasonal effects, there is potential for increased revisions until the seasonal pattern is established within the time series. The seasonal pattern is generally established after 60 months in a monthly time series.

Please note that a monthly seasonally adjusted chained volume series is not available pre-2010. This is due to monthly data not being available for this period. These data are a requirement for creating previous year's prices from which chain-linked volume measures are created.

## 10. Further information

Releases on construction output and employment prior to the transfer to ONS can be found on the [BIS website](#).

## 11. User engagement

The [user engagement](#) section of our website contains preliminary results of the survey held in regarding users' satisfaction and use of the new orders and construction output surveys.

We published a summary of [initial responses](#) to the Short-term indicators National Accounts survey on 9 February 2015.

## 12. Code of Practice for Official Statistics

National Statistics are produced to high professional standards which are set out in the [Code of Practice for Official Statistics](#). They undergo regular quality assurance reviews to ensure that they meet customer needs and are produced free from any political interference.

## 13. Publication policy

Details of the policy governing the release of new data are available from our [Media Relations Office](#).

Also available is a list of the organisations given [pre-publication access](#) to the contents of this bulletin.

## 14. Accessing data

The Output in the Construction Industry statistical bulletin and relevant time series datasets are available to download free from our [website](#) at 9.30 am on the day of publication.

## 15. Further information and user feedback

As a user of our statistics, we would welcome feedback on this release, in particular on the content, format and structure. For further information about this release, or to send feedback on our publications, please contact us using the following information.

### Next publication:

Output in the construction industry January 2016 and new orders Quarter 4 (Oct to Dec) 2015:  
11 March 2016

Output in the construction industry February 2016: 15 April 2016

Issued by: Office for National Statistics, Government Buildings, Cardiff Road, Newport NP10 8XG

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

# 2A.M CONSTRUCTION OUTPUT: VOLUME SEASONALLY ADJUSTED BY SECTOR

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

# 4M CONSTRUCTION OUTPUT: VALUE NON-SEASONALLY ADJUSTED CURRENT PRICES BY SECTOR

£ million

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.
