Release date:  
18 July 2017

Next release:  
15 August 2017

## Table of contents

1. [Main points](#)
2. [Things you need to know about this release](#)
3. [Private rental prices see steady growth in Great Britain](#)
4. [England, Wales and Scotland see growth in private rental prices](#)
5. [Growth in private rental prices in London continues to slow](#)
6. [Links to related statistics](#)
7. [What's changed in this release?](#)
8. [Quality and methodology](#)

## 1 . Main points

- Private rental prices paid by tenants in Great Britain rose by 1.8% in the 12 months to June 2017; this is unchanged for the third consecutive month.
- In England, private rental prices grew by 1.9%, Wales saw growth of 1.1% while Scotland saw rental prices increase by 0.2% in the 12 months to June 2017.
- London private rental prices grew by 1.3% in the 12 months to June 2017, 0.5 percentage points below the Great Britain 12-month growth rate.

## 2 . Things you need to know about this release

On 15 June 2017, the [National Statistician announced](#) that pre-release access to Office for National Statistics publications would stop with effect from 1 July 2017. This is therefore the first Index of Private Housing Rental Prices (IPHRP) release where ministers and other officials did not receive access to the information prior to publication.

IPHRP measures the change in price of renting residential property from private landlords. The index is published as a series of price indices covering Great Britain, its constituent countries and the English regions. All data presented are non-seasonally adjusted.

IPHRP measures the change in price tenants face when renting residential property from private landlords, thereby allowing a comparison between the prices tenants are charged in the current month as opposed to the same month in the previous year. The index does not measure the change in newly advertised rental prices only, but reflects price changes for all private rental properties.

The IPHRP is constructed using administrative data. That is, the index makes use of data that are already collected for other purposes in order to estimate rental prices. The sources of private rental prices are [Valuation Office Agency](#) (VOA), [Scottish Government](#) (SG) and [Welsh Government](#) (WG). All three organisations deploy rental officers to collect the price paid for privately rented properties. The sources of [expenditure weights](#) are the [Department for Communities and Local Government](#) (DCLG), Scottish Government, Welsh Government and the VOA.

IPHRP is released as an [Experimental Statistic](#). While the [methodology](#) for IPHRP is final, Northern Ireland is currently excluded from the price index. We are working with [Northern Ireland Housing Executive](#) to secure private rental data for Northern Ireland. Once the coverage of IPHRP has been improved to that of the UK, the IPHRP will be assessed against the [Code of Practice for Official Statistics](#) to achieve [National Statistics](#) status.

## 3 . Private rental prices see steady growth in Great Britain

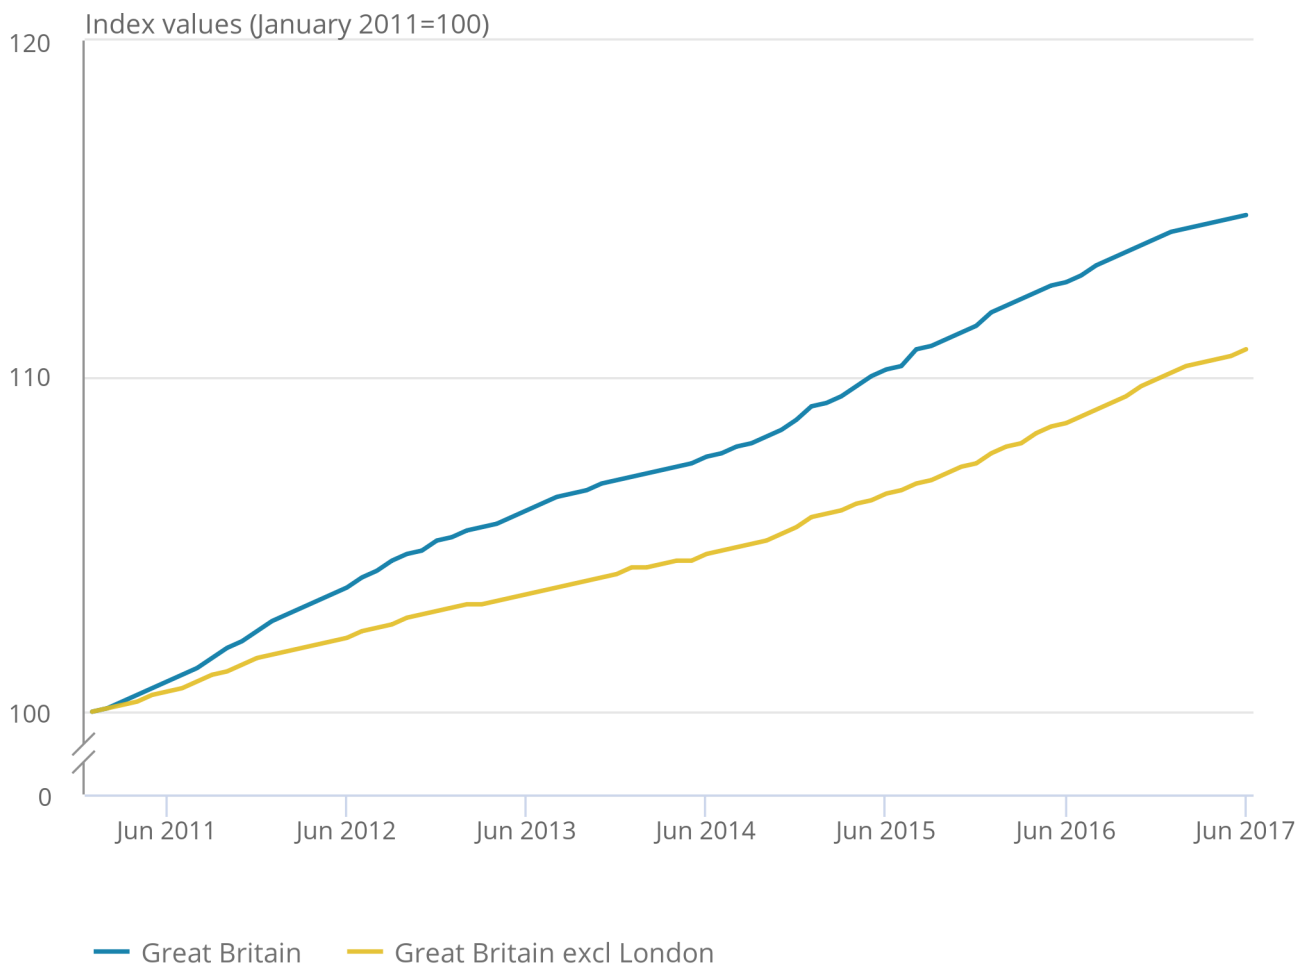

Between January 2011 and June 2017, private rental prices in Great Britain increased by 14.8%, strongly driven by the historical growth in private rental prices within London. When London is excluded, private rental prices increased by 10.8% over the same period.

January 2011 to June 2017

### Figure 1: Index of Private Housing Rental Prices indices, Great Britain

January 2011 to June 2017

Source: Office for National Statistics

#### Source: Office for National Statistics

Growth in private rental prices paid by tenants in Great Britain has seen signs of a slowdown since the end of 2015, increasing by 1.8% in the 12 months to June 2017. For example, a property that was rented for £500 per month in June 2016, which saw its rent increase by the average rate in Great Britain, would be rented for £509 in June 2017. This slowdown in the growth in private rental prices in Great Britain is mainly driven by a slowdown in London over the same period.

The 12-month growth rate of private rental prices paid by tenants in Great Britain was unchanged in June 2017 compared with May 2017, at 1.8%. Rental prices for Great Britain excluding London increased by 2.0% in the 12 months to June 2017, unchanged from May 2017 (Figure 2). The growth rate for London (1.3%) in the 12 months to June 2017 is 0.5 percentage points below that of Great Britain.

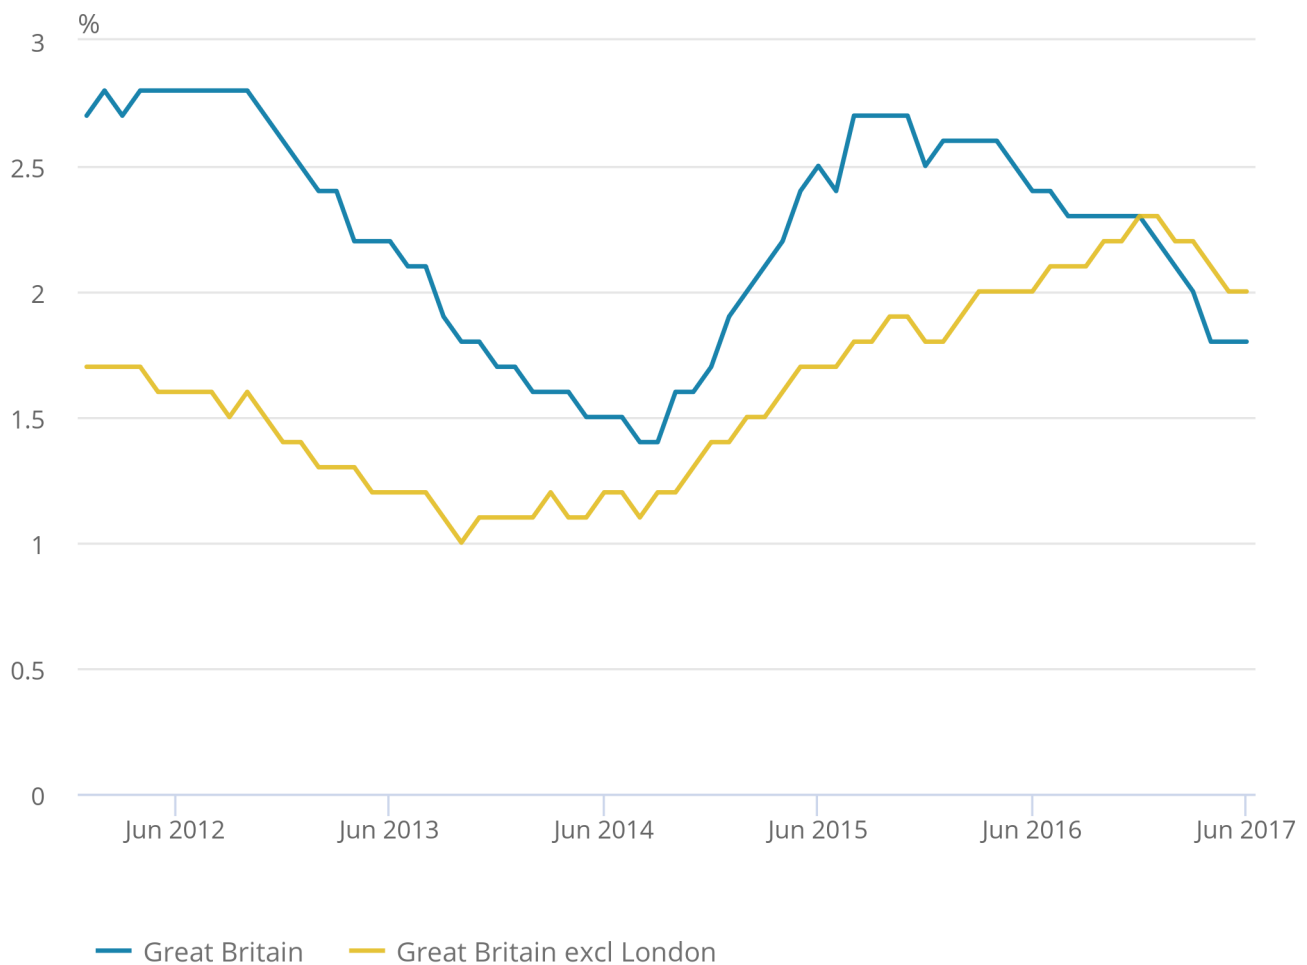

The [Royal Institute of Chartered Surveyors \(RICS\) May 2017 Residential Market Survey](#) reported that tenant demand rose only marginally (on a non-seasonally adjusted basis), with the pace of increase the most moderate since December 2016. The [Association of Residential Letting Agents \(ARLA\)](#) reported in their [Private Rented Sector Report](#) for May 2017 that the supply of rental stock had risen by 11% over the last 12 months.

## 4 . England, Wales and Scotland see growth in private rental prices

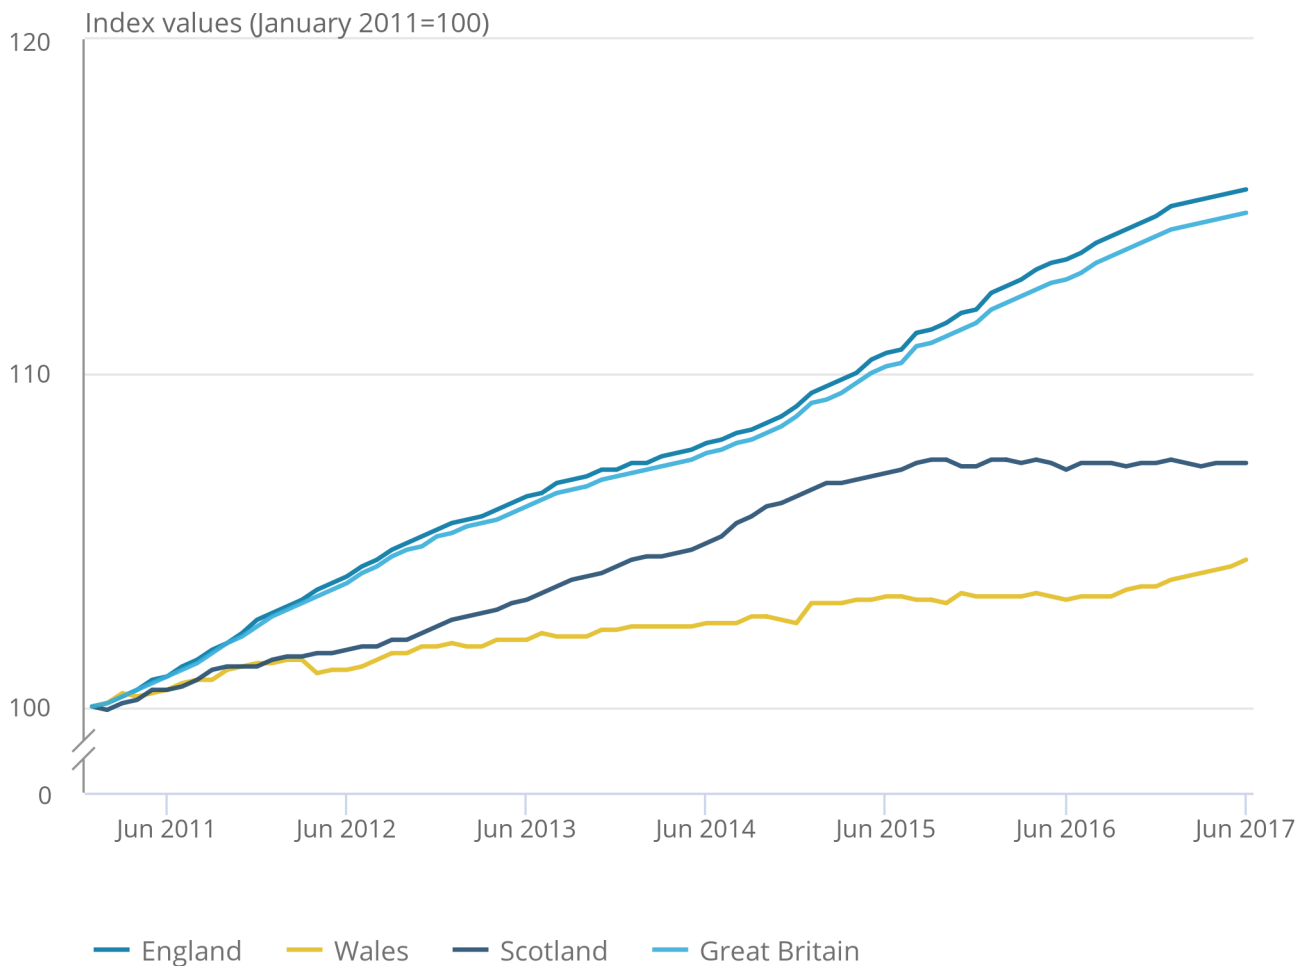

All the countries that constitute Great Britain have experienced rises in their private rental prices since 2011 (Figure 3). Since January 2011, rental prices in England have increased more than those in Wales and Scotland.

**Figure 3: Index of Private Housing Rental Prices indices for Great Britain and its constituent countries**

January 2011 to June 2017

Figure 3: Index of Private Housing Rental Prices indices for Great Britain and its constituent countries

January 2011 to June 2017

Source: Office for National Statistics

Source: Office for National Statistics

The annual rate of change for Wales (1.1%) in June 2017 continues to be below that of England (1.9%) and Great Britain (1.8%). However, this is the first time the annual rate of change for Wales has been above 1.0% since February 2012. Wales has shown a broad increase in its annual growth rate since July 2016.

Rental growth in Scotland increased by 0.2% in the 12 months to June 2017 and has remained around zero since August 2016. This weaker growth may be due to stronger supply and weaker demand in Scotland as reported by the [Association of Residential Letting Agents \(ARLA\)](#).

## 5 . Growth in private rental prices in London continues to slow

Growth in private rental prices in London was 1.3% in the 12 months to June 2017, unchanged from May 2017. The Royal Institute of Chartered Surveyors (RICS) report in their [May 2017 Residential Market Survey](#) that near term expectations are still negative in the capital, an ongoing trend stretching back to August 2016. The report notes that London rental projections are broadly flat and have not shown any improvements in recent months.

The largest annual rental price increases were in the South East (2.8%), unchanged from May 2017 (Figure 5). This was followed by the East Midlands (2.6%), up from 2.5% in May 2017, the South West (2.4%), down from 2.5% in May 2017 and the East of England (2.3%), unchanged from May 2017.

The lowest annual rental price increases were in the North East (0.5%), down from 0.6% in May 2017, London (1.3%), unchanged from May 2017, the North West (1.5%), up from 1.3% in May 2017 and Yorkshire and The Humber (1.7%), unchanged from May 2017.

## 6 . Links to related statistics

There are a number of other statistics available for rental and housing prices.

[Valuation Office Agency](#) (VOA) publishes [private rental market statistics](#). These cover the average prices paid for renting private housing in England to the level of region and local authority. The composition of the sample used for this publication varies over time and therefore makes it hard to produce reliable comparisons over different time periods. For an evaluation of our rental price indices and the growth in average private rental prices published by VOA, please see the article [Explaining private rental growth](#).

[Department for Communities and Local Government](#) (DCLG) publishes [social rent statistics](#). These cover average prices paid for renting both local authority and private registered provider (housing association) properties in England. These are collected from the continuous recordings of lettings and sales in social housing (CORE) and are available at regional and local authority level.

[Scottish government](#) publishes [social rent statistics for Scotland](#). These cover the average weekly rents paid for local authority and registered social landlords, and are available at area level. [Private Sector Rent Statistics](#) are also published annually, which cover the average price paid for renting private housing in Scotland.

[Welsh government](#) publishes [social rent statistics for Wales](#). These cover the average weekly rents paid for local authority and registered social landlords, and are available at area level. [Private Sector Rents](#) are also published on an annual basis, which cover the average price paid for renting private housing in Wales.

[Northern Ireland Housing Executive](#) publishes a bi-annual Summary Research Report on the [Performance of the Rental Market in Northern Ireland](#). This report analyses trends in the private rental sector at district council level during a 6-month period.

In addition to government sources, a number of private companies such as [Countrywide](#), [Homelet](#) and [LSL Property Services](#) produce statistics on the private rental market. These are predominantly flow measures of private rents, whereas the Index of Private Housing Rental Prices (IPHRP) is a stock measure. More information on how these compare to IPHRP can be found in the article [Comparing measures of private rental growth in the UK](#).

The [UK House Price Index](#) publishes average house prices and associated growth rate statistics to the level of region and local authority. Residential house price growth in Great Britain has typically been stronger than rental price growth for a number of years, with an average 12-month rate of house price inflation between January 2013 and April 2017 of 5.8%, compared with 2.1% for rental prices.

## 7 . What's changed in this release?

The Index of Private Housing Rental Prices (IPHRP) is now published on the second or third Tuesday of each month to bring it in line with other prices-related releases grouped under new “theme” days. This will increase the coherence of our data releases; for more information see [Changes to publication schedule for economic statistics](#).

An update to the quarterly article [Comparing measures of private rental growth in the UK](#) was published alongside this release and compares growth in the IPHRP to other measures of private rental growth.

## 8 . Quality and methodology

Details of the [methodology used to calculate the Index of Private Housing Rental Prices \(IPHRP\)](#) can be found in the July 2013 IPHRP article but this article requires some updating. In March 2015, methodological improvements were implemented to improve the matching of properties over time; this ensures that we are comparing “like with like”. These [methodological improvements](#) were presented in the January 2015 article.

In September 2015, we published an evaluation of our rental price indices against the growth in average private rental prices published by Valuation Office Agency (VOA); please see the article [Explaining private rental growth](#) for more information. [Comparisons of IPHRP against other private rent measures](#) can be found in the article published alongside this release.

The [IPHRP Quality and Methodology Information document](#) contains important information on:

- the strengths and limitations of the data and how it compares with related data
- uses and users of the data
- how the output was created
- the quality of the output including the accuracy of the data
