

Statistical bulletin

GDP, West Midlands: April to June 2019

Quarterly economic activity for the West Midlands including the construction, production and services industrial sectors.

2 . GDP growth in the West Midlands was negative 1.6% in Quarter 2 (Apr to June) 2019

Figure 1: Quarter on quarter GDP growth Quarter 3 (July to Sept) 2017 to Quarter 2 (Apr to June) 2019 in the West Midlands

Figure 1: Quarter on quarter GDP growth Quarter 3 (July to Sept) 2017 to Quarter 2 (Apr to June) 2019 in the West Midlands

Source: Office for National Statistics – Regional GDP estimate

Notes:

1. Q1 refers to Quarter 1 (Jan to Mar), Q2 refers to Quarter 2 (Apr to June), Q3 refers to Quarter 3 (July to Sept) and Q4 refers to Quarter 4 (Oct to Dec).

Gross domestic product (GDP) in the West Midlands had negative 1.6% growth in Quarter 2 (Apr to June) 2019, following growth of 0.2% in Quarter 1 (Jan to Mar) 2019. Compared with the same quarter of the previous year, GDP fell by 0.6%.

3 . Production had the largest negative growth in Quarter 2 (Apr to June) 2019

Figure 2: Chained volume indices (2016=100) in GDP in the West Midlands, between Quarter 3 (July to Sept) 2017 and Quarter 2 (Apr to June) 2019

Figure 2: Chained volume indices (2016=100) in GDP in the West Midlands, between Quarter 3 (July to Sept) 2017 and Quarter 2 (Apr to June) 2019

Source: Office for National Statistics – Regional GDP estimate

Notes:

1. Q1 refers to Quarter 1 (Jan to Mar), Q2 refers to Quarter 2 (Apr to June), Q3 refers to Quarter 3 (July to Sept) and Q4 refers to Quarter 4 (Oct to Dec).

In Quarter 2 (Apr to June) 2019, the production, construction, services and agriculture sectors fell by 2.6%, 1.8%, 1.3% and 0.6% respectively.

Relative to 2017, the West Midlands has shown strong growth in the construction sector, with growth until Quarter 2 2019, when it has fallen. Agriculture and services have remained relatively steady since 2017, and production has fallen since the beginning of 2018.

4 . Construction made the largest contribution to growth in Quarter 2 (Apr to June) 2019

Figure 3: Contributions to GDP in the West Midlands in Quarter 2 (Apr to June) 2019, by industry section

Figure 3: Contributions to GDP in the West Midlands in Quarter 2 (Apr to June) 2019, by industry section

Notes:

Sector names

- A. Agriculture
- B - E. Production
- F. Construction
- G - T. Services

Industry names

- A. Agriculture
- B. Mining and quarrying
- C. Manufacturing
- D. Electricity, gas, steam and air conditioning supply
- E. Water supply; sewerage, waste management and remediation activities
- F. Construction
- G. Wholesale and retail trade; repair of motor vehicles and motorcycles
- H. Transportation and storage
- I. Accommodation and food service activities
- J. Information and communication
- K. Financial and insurance activities
- L. Real estate activities
- M. Professional, scientific and technical activities
- N. Administrative and support service activities
- O. Public administration and defence; compulsory social security
- P. Education
- Q. Human health and social work activities
- R. Arts, entertainment and recreation
- S. Other service activities
- T. Activities of households as employers; undifferentiated goods and services, producing activities of households for own use

The services sector fell by 1.6% and made the biggest negative contribution to growth in the West Midlands, at negative 0.98 percentage points. Within services, human health and social work activities and administrative and support service activities fell by 3.4% and 4.8%, contributing negative 0.28 and 0.24 percentage points respectively. Meanwhile, finance grew 6.9% and made the largest positive contribution, at 0.30 percentage points. The production and construction sectors fell by 2.6% and 1.8%, contributing 0.51 and 0.11 percentage points respectively. Agriculture showed no contribution to two decimal places.

5 . GDP, UK regions and countries data

[Quarterly country and regional GDP](#)

Dataset | Released 07 February 2020

Quarterly economic activity within Wales and the nine English regions (North East, North West, Yorkshire and The Humber, East Midlands, West Midlands, East of England, London, South East, South West).

6 . Glossary

GDP

Gross domestic product (GDP) measures the value of goods and services produced in the UK. It estimates the size of and growth in the economy.

Production

Production is the process of combining various materials or other inputs in order to generate a product for consumption. It includes output in the manufacturing (the largest component of production), mining and quarrying, energy supply, and water supply and waste management industries.

Services

Services are activities that people or businesses provide for a consumer or other businesses. The main components of the service industries are: wholesale and retail; hotels and restaurants; transport, storage and communication; business services and finance; and government and other services.

7 . Measuring the data

The main data for these estimates are turnover data from approximately 1.9 million Value Added Tax (VAT) returns. Information from the [Inter-Departmental Business Register \(IDBR\)](#) on workplace employment allows us to apportion the VAT turnover for each business based on its employment share within a region. The [quality assurance of administrative data \(QAAD\) report for VAT turnover data](#) is available.

Other volume measure data are used where appropriate or where VAT data have insufficient coverage. A full list of other data sources is included in the [methodology article](#).

A [detailed analysis](#) of these new data was published in the Economic Review on 21 October 2019.

Additional analysis has allowed us to now publish a longer back series. This includes data from Quarter 2 (Apr to June) 2012. This publication includes a consistent time series of growth rates and indices back to 2012; these data are consistent with the Blue Book 2019-consistent regional accounts estimates published in December 2019. We use a statistical algorithm to automatically align our datasets, to ensure consistency.

We welcome feedback and comments on this publication, including on presentation and further development of other data sources.

8 . Strengths and limitations

These data are designated as [Experimental Statistics](#). These are statistics that are in the testing phase. We will continue to develop these statistics and seek users' views on their uses and needs for these data.

While the data sources and methods used in both our regional and national estimates of gross domestic product (GDP) are broadly similar, there are some clear differences. For example, in the extent to which Value Added Tax (VAT) data are used in the compilation of these estimates.

These estimates aim to produce the best estimates at a subnational level. However, the sum of the UK regions may not equal the national total, reflecting that there are some differences in data sources and methods. We have constrained our regional GDP estimates in such a way that minimises the changes to the region by industry quarterly growth rates using automated statistical methods. While the overall impact of this constraining on the regional estimates is small, we will continue to examine the impact of this method and consider options to determine which one is best suited to these data in advance of applying to be assessed as [National Statistics](#).

Following the [announcement](#) by the UK Statistics Authority (UKSA) in March 2019, [Construction Output Price Indices \(OPIs\), UK](#); [Construction output in Great Britain](#); and [construction new orders](#) were re-designated as National Statistics. It was noted, however, that the [subnational and subsector breakdowns](#) were excluded from consideration because of concerns around the path of the subnational estimates of construction output. We have worked closely with the Construction Statistics Steering Group and Consultative Committee on Construction Industry Statistics (CCCIS) on improving these estimates. While these users have acknowledged the improvements in the modelling of these estimates, there is ongoing development work to improve these lower-level estimates as we ultimately look to regain National Statistic status in due course. Any developments in this area will in turn lead to improved accuracy in the regional GDP estimates.
