

Statistical bulletin

# GDP, UK regions and countries: October to December 2019

Quarterly economic activity within the countries of the UK (England, Wales, Scotland and Northern Ireland) and the nine English regions (North East, North West, Yorkshire and The Humber, East Midlands, West Midlands, East of England, London, South East, and South West).

4. [GDP growth by key industrial sector for the English regions and Wales](#)
5. [GDP, UK regions and countries data](#)
6. [Glossary](#)
7. [Measuring the data](#)
8. [Strengths and limitations](#)
9. [Related links](#)

# 1 . Other pages in this release

- [Methodology](#) used to produce these estimates
- [GDP in Scotland](#), published by the Scottish Government
- [GDP in Northern Ireland](#), published by the Northern Ireland Statistics and Research Agency

## 2 . Main points

- In Quarter 4 (Oct to Dec) 2019, Scotland and Northern Ireland showed positive growth at 0.2%, while England and Wales showed negative growth at 0.1% and 1.0% respectively.
- Wales' growth in Quarter 4 (Oct to Dec) 2019 was negative 1.0%; this offsets the rise in Quarter 3 (July to Sept) of 0.7%.
- Of the nine English regions, the highest growth in Quarter 4 (Oct to Dec) 2019 was the South West with 0.8%.
- London showed the largest positive growth in gross domestic product (GDP) in Quarter 4 (Oct to Dec) 2019 when compared with the same quarter a year earlier, at 5.0%; this was more than double any other region.
- Estimates for Scotland and Northern Ireland in this release are consistent with those published by the Scottish Government and the Northern Ireland Statistics and Research Agency (NISRA) respectively.
- Data presented for Quarter 1 (Jan to March) 2012 onwards are consistent with the [Balanced Regional Accounts](#) estimates that were published in December 2019.

These estimates are designated as [experimental statistics](#) while they are still in development, and should be interpreted with some caution. Regional data can be volatile and quarterly movements should be considered alongside the long term trend. To assist with this, quarter on same quarter a year earlier data are published alongside the latest quarter on quarter estimates.

During the coronavirus (COVID-19) pandemic, we are working to ensure that we continue to publish GDP, UK regions and countries. The data collection for this quarter's publication relates to an earlier time period. We have streamlined our bulletin, however all data will continue to be available in [our regional GDP dataset](#).

More timely regional estimates for selected variables are available in the latest [Coronavirus and the economic impacts on the UK](#) publication.

### 3 . Analysis of regional gross domestic product (GDP) growth

**Figure 1: Two out of the four countries in the UK had positive growth for Quarter 4 (Oct to Dec) 2019**

Seasonally adjusted quarter on quarter GDP growth for the UK and its countries, Quarter 4 (Oct to Dec) 2017 to Quarter 4 (Oct to Dec) 2019

Figure 1: Two out of the four countries in the UK had positive growth for Quarter 4 (Oct to Dec) 2019

Seasonally adjusted quarter on quarter GDP growth for the UK and its countries, Quarter 4 (Oct to Dec) 2017 to Quarter 4 (Oct to Dec) 2019

Source: Office for National Statistics – Regional GDP estimate

Notes:

1. Q1 refers to Quarter 1 (Jan to Mar), Q2 refers to Quarter 2 (Apr to June), Q3 refers to Quarter 3 (July to Sept), Q4 refers to Quarter 4 (Oct to Dec).

UK gross domestic product (GDP) growth was flat in Quarter 4 (Oct to Dec) 2019. This followed positive growth of 0.5% in Quarter 3 (July to Sept) 2019.

Two of the four countries in the UK (Scotland and Northern Ireland) had positive quarter on quarter growth of 0.2% in Quarter 4 2019. Growth in England was negative, at 0.1% while Wales showed the lowest growth this quarter of negative 1.0%.

More information about the drivers for these changes can be found in the data tables that accompany this publication and the data published by the [Scottish Government](#) and the [Northern Ireland Statistics and Research Agency](#).

**Figure 2: Growth in GDP was highest in the South West followed by London and the North West in Quarter 4 (Oct to Dec) 2019**

Seasonally adjusted quarter on quarter GDP growth for the regions of England and countries of the UK for Quarter 3 (July to Sept) 2019 and Quarter 4 (Oct to Dec) 2019

**Figure 2: Growth in GDP was highest in the South West followed by London and the North West in Quarter 4 (Oct to Dec) 2019**

Seasonally adjusted quarter on quarter GDP growth for the regions of England and countries of the UK for Quarter 3 (July to Sept) 2019 and Quarter 4 (Oct to Dec) 2019

Source: Office for National Statistics – Regional GDP estimate

**Notes:**

1. Q1 refers to Quarter 1 (Jan to Mar), Q2 refers to Quarter 2 (Apr to June), Q3 refers to Quarter 3 (July to Sept), Q4 refers to Quarter 4 (Oct to Dec).

The South West shows the highest growth in Quarter 4 (Oct to Dec) 2019 at 0.8%, followed by London and the North West at 0.5%. The North East, Yorkshire and The Humber, East Midlands, West Midlands, East of England, South East and Wales all showed negative growth in Quarter 4 (Oct to Dec) 2019.

The following table shows the quarter on quarter growths across the countries and regions in Quarter 4 (Oct to Dec) 2019 and in Quarter 3 (July to Sept) 2019.

Table 1: Seasonally adjusted quarter on quarter percentage growth in the countries and regions of the UK, Quarter 3 (July to Sept) 2019 and Quarter 4 (Oct to Dec) 2019

<b>Country/Region</b>	<b>Growth in 2019 Quarter 3 (July to Sept)</b>	<b>Growth in 2019 Quarter 4 (Oct to Dec)</b>
<b>North East</b>	1.6%	-1.3%
<b>North West</b>	-0.5%	0.5%
<b>Yorkshire and The Humber</b>	1.1%	-0.4%
<b>East Midlands</b>	-0.3%	-0.6%
<b>West Midlands</b>	0.2%	-0.6%
<b>East of England</b>	1.0%	-0.4%
<b>London</b>	1.5%	0.5%
<b>South East</b>	-0.4%	-0.6%
<b>South West</b>	0.4%	0.8%
<b>England</b>	0.6%	-0.1%
<b>Wales</b>	0.7%	-1.0%
<b>Scotland</b>	0.3%	0.2%
<b>Northern Ireland</b>	-0.1%	0.2%
<b>United Kingdom</b>	0.5%	0.0%

Figure 3: London showed the largest positive growth in GDP for Quarter 4 (Oct to Dec) 2019 compared with the same Quarter a year earlier

Seasonally adjusted quarter on same quarter a year earlier; GDP growth in the regions of England, Wales, Scotland and Northern Ireland for Quarter 4 (Oct to Dec) 2019

Source: Office for National Statistics – Regional GDP estimate

Notes:

1. Q4 refers to Quarter 4 (Oct to Dec).

Three regions in the UK had growth in Quarter 4 (Oct to Dec) 2019 above the UK level when compared with the same quarter in 2018. These were London at 5.0%, the South West at 1.1% and Yorkshire and The Humber at 1.0%. Scotland and Northern Ireland fell below the UK level at positive 0.6%.

More information regarding the sub-industries contributing to these quarterly changes can be found in the data tables for Wales, the regions of England and the data published by the [Scottish Government](#) and [Northern Ireland Statistics and Research Agency \(NISRA\)](#).

## 4 . GDP growth by key industrial sector for the English regions and Wales

Data for Scotland and Northern Ireland are not shown here as they are published by the Scottish Government and the Northern Ireland Statistics and Research Agency (NISRA).

[Download the data](#)

More detail about the growth in GDP in each region can be found in [our regional GDP dataset](#).

These estimates are calculated based on site-level (local unit) activity. Industry movements may differ to those at the national level, which are based on overall (reporting unit) business activity.

## 5 . GDP, UK regions and countries data

[Quarterly country and regional GDP](#)

Dataset | Released on 31 July 2020

Quarterly economic activity within Wales and the nine English regions (North East, North West, Yorkshire and The Humber, East Midlands, West Midlands, East of England, London, South East, and South West).

## 6 . Glossary

## GDP

Gross domestic product (GDP) measures the value of goods and services produced in the UK. It estimates the size of and growth in the economy.

## Production

Production is the process of combining various materials or other inputs in order to generate a product for consumption. It includes output in the manufacturing (the largest component of production), mining and quarrying, energy supply, and water supply and waste management industries.

## Services

Services are activities that people, or businesses provide for a consumer or other businesses. The main components of the service industries are: wholesale and retail; hotels and restaurants; transport, storage and communication; business services and finance; and government and other services.

## 7 . Measuring the data

The main data for these estimates is turnover data from approximately 1.9 million VAT returns. Information from the Inter-departmental business register (IDBR) on workplace employment allows us to apportion the VAT turnover for each business based on their employment share within a region. The [quality assurance of administrative data \(QAAD\) report for VAT data](#) is available.

Other volume measure data are used where appropriate, or where VAT data has insufficient coverage. A full list of other data sources is included in the [methodology article](#).

A [detailed analysis](#) of these new data was published in the Economic Review on 21 October 2019.

This publication includes a consistent time series of growth rates and indices, back to 2012. These are consistent with the [Balanced Regional Accounts](#) estimates published in December 2019. We use a statistical algorithm to automatically align our datasets to ensure consistency. Revisions back to 2012 reflect statistical improvements and ongoing changes to methods used in compiling these estimates as the ONS develop these [experimental statistics](#).

We welcome feedback and comments on this publication, including on presentation, further development of other data sources.

## 8 . Strengths and limitations

These data are designated as [experimental statistics](#). These are statistics that are in the testing phase. We will continue to develop these statistics and seek users' views on their uses and needs for these data.

While the data sources and methods used in both our regional and national estimates of GDP are broadly similar, there are some clear differences. For example, in the extent to which VAT data is used in the compilation of these estimates.

These estimates aim to produce the best estimates at a subnational level. However, the sum of the UK regions may not equal the national total, reflecting that there are some differences in data sources and methods. We have constrained our regional GDP estimates in such a way that minimises the changes to the region by industry quarterly growth rates using automated statistical methods. While the overall impact of this constraining on the regional estimates is small, we will continue to examine the impact of this method and consider options to determine which one is best suited to these data in advance of applying to be assessed as [National Statistics](#).

Following the [announcement](#) by the UK Statistics Authority in March 2019, Construction output price indices, Great Britain construction output statistics and Construction new orders were re-designated as National Statistics. It was noted, however, that the [subnational and subsector breakdowns](#) were excluded from consideration because of concerns around the path of the sub-national estimates of construction output. We have worked closely with the Construction Statistics Steering Group and Consultative Committee on Construction Industry Statistics (CCCIS) on improving these estimates. While these users have acknowledged the improvements in the modelling of these estimates, there is ongoing development work to improve these lower-level estimates as we ultimately look to regain National Statistic status in due course. Any developments in this area will in turn lead to improved accuracy in the Regional GDP estimates.
