

Statistical bulletin

GDP first quarterly estimate, UK: April to June 2022

First quarterly estimate of gross domestic product (GDP). Contains current and constant price data on the value of goods and services to indicate the economic performance of the UK.

10. [Related Links](#)

1 . Main Points

- UK gross domestic product (GDP) is estimated to have fallen by 0.1% in Quarter 2 (Apr to June) 2022, based on the first estimate.
- In output terms, services fell by 0.4% in Quarter 2 2022 with the largest negative contribution from human health and social work activities, reflecting a reduction in coronavirus (COVID-19) activities.
- There were positive contributions from consumer-facing services, such as other service activities (travel agencies and tour operators did particularly well as COVID-19 restrictions eased on the tourism industry), accommodation and food service activities , and arts, entertainment and recreation activities.
- There was a 0.2% decrease in real household consumption in Quarter 2 2022, offset by a positive contribution from net trade; however, we continue to advise caution because of recent changes in data collection affecting the EU trade flows.
- Monthly estimates published today (12 August 2022) show that GDP fell by 0.6% in June 2022, following a downwardly revised 0.4% increase in May; the Platinum Jubilee and the move of the May bank holiday led to an additional working day in May 2022 and two fewer working days in June 2022, although this impacted on monthly GDP, there was little impact on the quarterly estimates.
- Compared with the same quarter a year ago, the implied GDP deflator rose by 6.0%, primarily reflecting the 7.3% increase in the price of household consumption expenditure, which is the fastest annual household deflator growth rate since 1991.

For Quarter 2 2022, [GDP estimates are subject to more uncertainty than usual](#) as a result of the challenges we faced estimating GDP in the current conditions.

2 . Headline GDP figures

The first quarterly estimate of UK gross domestic product (GDP) shows an estimated fall of 0.1% in Quarter 2 (Apr to June) 2022 (Figure 1). The level of quarterly GDP in Quarter 2 2022 is now 0.6% above its pre-coronavirus level (Quarter 4 (Oct to Dec) 2019), and 2.9% higher than Quarter 2 2021. Early estimates of GDP are subject to revision. For more information see [our previous analysis, Communicating gross domestic product](#).

As published today (12 August 2022) in [our Monthly GDP estimates bulletin](#) GDP is estimated to have fallen by 0.6% in June 2022, following an increase of 0.4% in May 2022. It is important to note that the Queen's Platinum Jubilee and the move of the May bank holiday led to an additional working day in May 2022 and two fewer working days in June 2022. Therefore, this should be considered when interpreting the seasonally adjusted movements involving May and June 2022. For more information on our treatment of the Jubilee within the monthly figures, please refer to the Monthly GDP bulletin.

Figure 1: Real GDP fell by an estimated 0.1% in Quarter 2 (Apr to June) 2022 and is now estimated to be 0.6% above its pre-coronavirus level

UK, Quarter 4 (Oct to Dec) 2019 to Quarter 2 (Apr to June) 2022

Figure 1: Real GDP fell by an estimated 0.1% in Quarter 2 (Apr to June) 2022 and is now estimated to be 0.6% above its pre-coronavirus level

UK, Quarter 4 (Oct to Dec) 2019 to Quarter 2 (Apr to June) 2022

Source: Office for National Statistics – GDP first quarterly estimate

Notes:

1. Q1 refers to Quarter 1 (Jan to Mar), Q2 refers to Quarter 2 (Apr to June), Q3 refers to Quarter 3 (July to Sept) and Q4 refers to Quarter 4 (Oct to Dec).
2. Index is referenced to Quarter 4 (Oct to Dec) 2019.

Nominal GDP increased by 1.1% in Quarter 2 2022 and is 9.1% higher than the same quarter a year ago. It is now 10.5% above its pre-coronavirus pandemic levels.

Table 1: Headline national accounts indicators for the UK

	Chained volume measures		Current market prices	
	GDP	GDP per head	GDP	GDP implied deflator
Seasonally adjusted				
2021	7.4	6.7	7.8	0.3
2021 Q1	-1.2	-1.3	0.1	1.3
2021 Q2	5.6	5.4	3.6	-1.9
2021 Q3	0.9	0.9	1.6	0.6
2021 Q4	1.3	1.3	3.0	1.7
2022 Q1	0.8	0.7	3.2	2.4
2022 Q2	-0.1	-0.1	1.1	1.1

Source: Office for National Statistics – GDP first quarterly estimate

Notes

1. Percentage change on previous period.
2. Q1 refers to Quarter 1 (Jan to Mar), Q2 refers to Quarter 2 (Apr to June), Q3 refers to Quarter 3 (July to Sept) and Q4 refers to Quarter 4 (Oct to Dec).
3. Population data are consistent with the 25 June 2021 published estimates.

The implied GDP deflator rose by 1.1% in Quarter 2 2022, mainly driven by a 2.7% increase in the implied price of household consumption. Compared with the same quarter a year ago, the implied GDP deflator rose by 6.0%, primarily reflecting the 7.3% increase in the price of household consumption expenditure, which is the fastest annual household rate since 1991.

The implied GDP deflator represents the broadest measure of inflation in the domestic economy, reflecting changes in the price of all goods and services that comprise GDP. It is important to note that the GDP deflator covers the whole of the economy, not just consumer spending. This includes the “implied” price of government consumption, which is the expenditure that is incurred by government in producing non-market goods and services.

Compared with the same quarter a year ago, there was a 6.0% increase in the implied price of government consumption. However, as there is no market price for this expenditure, we recommend caution in interpreting the movements in this implied price, particularly over the course of the coronavirus pandemic. For further details refer to [our blog, Public services: measuring the part they play in the economy through the pandemic](#).

Figure 2 shows the latest GDP performance for a selection of developed economies. The United States economy experienced a contraction of 0.2% in the second quarter, although most of the other selected G7 economies have seen positive real GDP growth in Quarter 2 2022.

Figure 2: GDP growth for the G7 economies showed a mixed picture in the second quarter of 2022

Percentage change (1dp), real GDP, Quarter 2 (Apr to June) 2022

Figure 2: GDP growth for the G7 economies showed a mixed picture in the second quarter of 2022

Percentage change (1dp), real GDP, Quarter 2 (Apr to June) 2022

- Explore the latest trends in employment, prices and trade in our [economic dashboard](#).
- View [all economic data](#).

3 . Output

In Quarter 2 (Apr to June) 2022, there was a 0.4% fall in [services](#) output, while [production](#) and [construction](#) output increased.

Services

Services output fell by 0.4% in Quarter 2 2022 and is now 1.1% above pre-coronavirus (COVID-19) pandemic levels. The largest negative contributions to services output resulted from human health and social work activities, and wholesale and retail trade (Figure 3). There was partially offsetting positive contributions from accommodation and food service activities, and other service activities.

There was a 5.4% fall in human health and social work activities, reflecting a large reduction in coronavirus activities, such as [NHS Test and Trace, COVID-19 vaccination programme](#) and lateral flow orders over the second quarter. There is further detail in our bulletin, [GDP monthly estimate, UK: May 2022](#).

There was a 1.0% fall in wholesale and retail trade. The Business Insights and Conditions Survey (BICS) highlighted that around 32% of businesses within the wholesale and retail trade industry reported [global supply chain disruptions](#) at the end of the second quarter of 2022. In addition, retail sales volumes fell across the quarter, as shown in [our bulletin, Retail sales, Great Britain: June 2022](#).

Despite an increase of 1.6% in Quarter 2 2022 in the wholesale and retail of cars, this industry remains 1.9% below pre-coronavirus pandemic levels. The Society of Motor Manufacturers and Traders (SMMT) noted that the [ongoing shortages in component supply and restrictions in China](#) have hampered the global vehicle production ability to fulfil demand in the second quarter of 2022.

The fall in services output was partially offset by increases in output from accommodation and food services (4.7%), driven by increases in accommodation and in food and beverage service activities reflecting rises in mobile food stands and takeaway food shops. This coincides with the Queen's Jubilee bank holidays, as further shown in our June GDP bulletin. There were also increases in other service activities (7.4%), and arts, entertainment and recreation (3.3%), which had previously been impacted by COVID-19 restrictions.

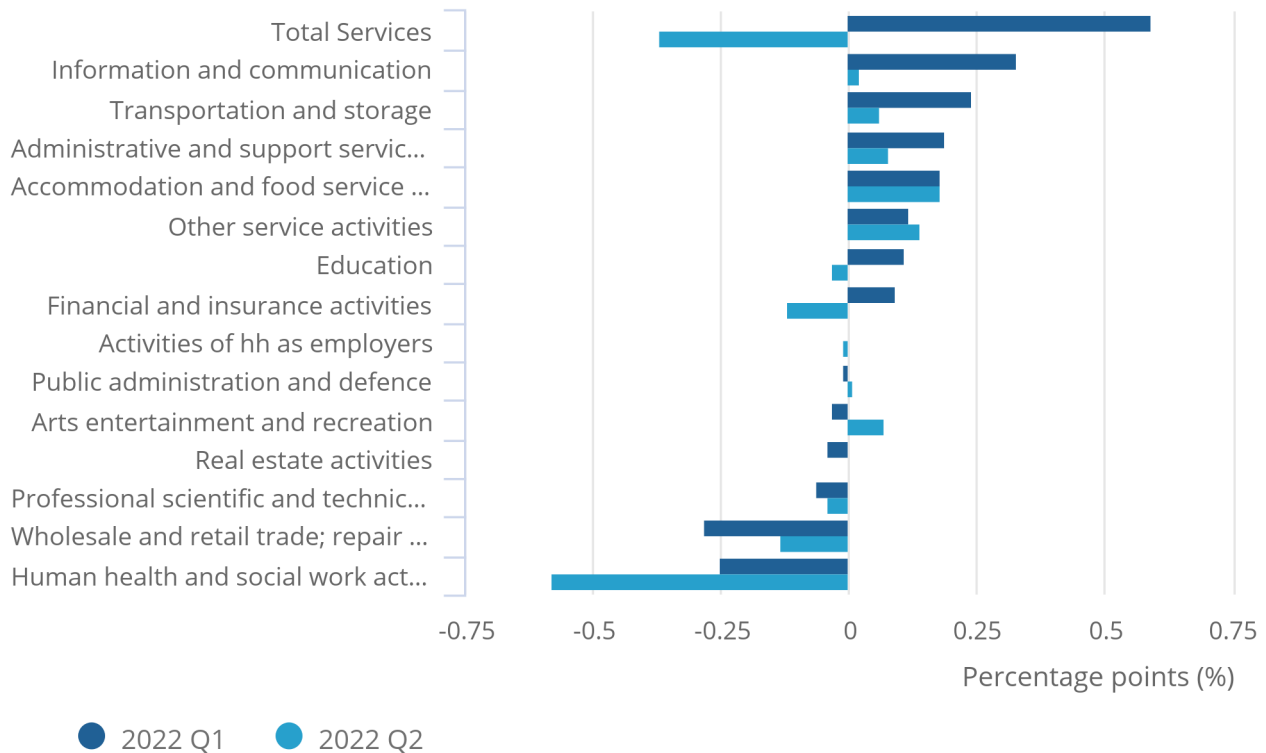

Administrative and support service activities rose by 1.2% in Quarter 2 2022 driven by an increase in travel agencies, tour operators and other related activities, benefitting from the easing of COVID-19 restrictions on the tourism industry.

Figure 3: Human health and social work activities was the main contributor to the fall in services in Quarter 2 (Apr to June) 2022

UK, contributions to services growth, Quarter 1 (Jan to Mar) 2022 to Quarter 2 (Apr to June) 2022

Figure 3: Human health and social work activities was the main contributor to the fall in services in Quarter 2 (Apr to June) 2022

UK, contributions to services growth, Quarter 1 (Jan to Mar) 2022 to Quarter 2 (Apr to June) 2022

Source: Office for National Statistics – GDP first quarterly estimate

Notes:

1. Chart shows contribution to services growth between Quarter 4 (Oct to Dec) 2021 to Quarter 1 (Jan to Mar) 2022 and Quarter 1 2022 to Quarter 2 (Apr to June) 2022.
2. Components contribution may not sum to total because of rounding.

Production

Production output rose by 0.5% in Quarter 2 2022, a slowdown compared with the previous quarter when it increased by 1.3%, while the level of production output remains 1.2% below pre-pandemic levels. The quarterly rise in production output was driven by a rise in electricity, gas, steam and air conditioning supply (2.7%), resulting from growth in the manufacture of gas; and electric power generation, transmission and distribution.

There were increases in water supply activities (2.9%), because of positive contributions from remediation activities and other waste management services; waste collection, treatment and disposal activities; and sewerage activities.

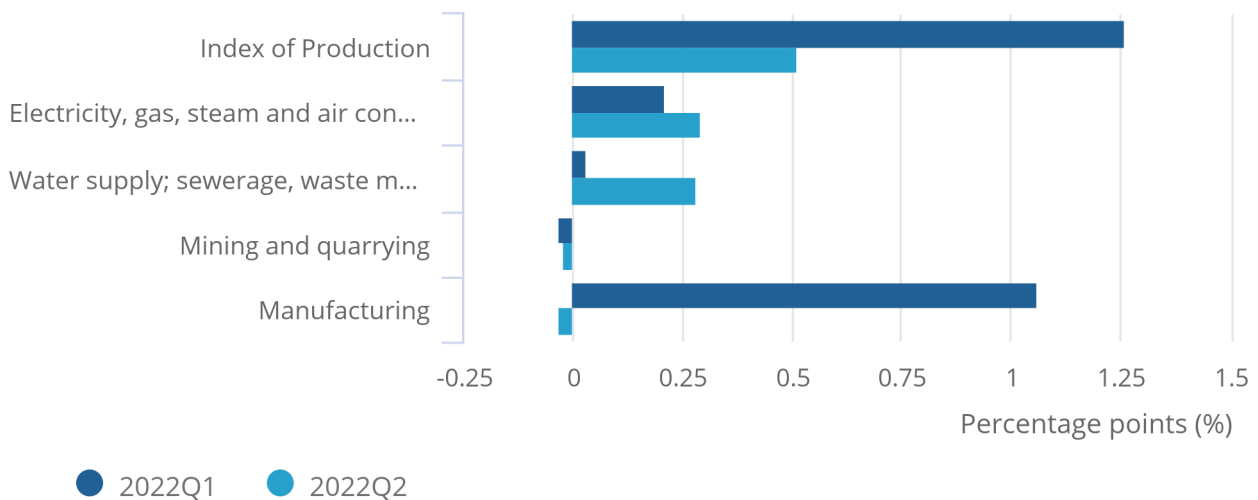

There was a 0.3% fall in mining and quarrying output in Quarter 2 (Apr to June) 2022, following a reduction in mining support service activities (Figure 4). Overall growth in manufacturing was broadly flat, however there were falls in 7 of the 13 manufacturing sub-sectors. The largest contributor to the fall in manufacturing was in manufacture of chemicals and chemical products; and manufacture of machinery and equipment. This was nearly all offset by an increase in the manufacture of transport equipment, which has seen four consecutive months of growth. For further information, please refer to our the [monthly GDP bulletin](#).

Figure 4: Water supply activities was the main contributor to the growth in production output in Quarter 2 (Apr to June) 2022

UK, contributions to production growth, Quarter 1 (Jan to Mar) 2022 to Quarter 2 (Apr to June) 2022

Figure 4: Water supply activities was the main contributor to the growth in production output in Quarter 2 (Apr to June) 2022

UK, contributions to production growth, Quarter 1 (Jan to Mar) 2022 to Quarter 2 (Apr to June) 2022

Source: Office for National Statistics – GDP first quarterly estimate

Notes:

1. Chart shows contribution to production growth between Quarter 4 (Oct to Dec) 2021 to Quarter 1 (Jan to Mar) 2022 and Quarter 1 2022 to Quarter 2 (Apr to June) 2022.
2. Components contribution may not sum to total because of rounding.

Construction

Construction output rose by 2.3% in Quarter 2 2022, and is now 2.7% above pre-coronavirus pandemic levels. Increases in both new work and repair and maintenance contributed to the quarterly growth. Further detail on construction growth rates can be found in our [Construction output in Great Britain: June 2022 bulletin](#).

4 . Expenditure

Expenditure fell by 0.1% in Quarter 2 (Apr to June) 2022, following a rise of 0.8% in the previous quarter. The latest quarterly fall in expenditure was driven by decreases in most of the expenditure components, particularly in household and government consumption expenditure (Figure 5).

Figure 5: There were falls in private and government consumption in Quarter 2 (Apr to June) 2022

UK, breakdown of expenditure components quarter-on-quarter growth, Quarter 1 (Jan to Mar) 2022 and Quarter 2 (Apr to June) 2022

Figure 5: There were falls in private and government consumption in Quarter 2 (Apr to June) 2022

UK, breakdown of expenditure components quarter-on-quarter growth, Quarter 1 (Jan to Mar) 2022 and Quarter 2 (Apr to June) 2022

Source: Office for National Statistics – GDP first quarterly estimate

Notes:

1. Q1 refers to Quarter 1 (Jan to Mar), Q2 refers to Quarter 2 (Apr to June), Q3 refers to Quarter 3 (July to Sept) and Q4 refers to Quarter 4 (Oct to Dec).
2. Private consumption is household final consumption expenditure and non-profit institutions serving households.
3. The chart for presentation purposes excludes acquisitions less disposable of assets and changes in inventories.

Private consumption

Real household expenditure fell by 0.2% in Quarter 2 2022, which was driven by falls in net tourism, clothing and footwear, food and non-alcoholic beverages, and restaurants and hotels. This was partially offset by rises in expenditure on transport, housing and health.

In current price terms, household expenditure rose by 2.6% in Quarter 2 2022, reflecting recent inflationary pressures on the value of this spending. The implied price of household expenditure increased by 7.3% when compared with Quarter 2 last year, the highest level since 1991. This is broadly consistent with the rise in the Consumer Prices Index including owner occupiers' housing costs, which recorded an [annual increase of 8.2% in June 2022](#).

Consumption of government goods and services

Real government consumption expenditure fell for the second consecutive quarter, declining by 2.9% in Quarter 2 2022. This was driven by declines in health consumption, which reflected falls in coronavirus (COVID-19) activities (such as Test and Trace, lateral flow devices and vaccinations). There was an increase in the underlying health activity that was unrelated to COVID-19 activities.

Net trade

Our trade estimates are primarily based on data collected by [HM Revenue and Customs \(HMRC\)](#). A recent [HMRC data collection change](#) affected our EU to Great Britain import statistics, and investigations have concluded that there is a discontinuity by value between the compilation methods. We therefore recommend caution in interpreting movements across periods, as outlined in [our impact article](#) and [our latest UK trade bulletin](#). For more information, please see [Section 8: Measuring the data](#).

The UK's trade deficit for goods and services improved to a 4.7% of nominal GDP in Quarter 2 2022 (Figure 6). Excluding non-monetary gold, the trade deficit was 4.5% of nominal GDP in Quarter 2 2022.

Figure 6: The UK's trade balance was negative 4.7% of nominal GDP in Quarter 2 (Apr to June) 2022

UK, Quarter 1 (Jan to Mar) 2019 to Quarter 2 (Apr to June) 2022

Source: Office for National Statistics – GDP first quarterly estimate

Notes:

1. Q1 refers to Quarter 1 (Jan to Mar), Q2 refers to Quarter 2 (Apr to June), Q3 refers to Quarter 3 (July to Sept) and Q4 refers to Quarter 4 (Oct to Dec).
2. [Non-monetary gold](#) (NMG) is an erratic series and so it can be useful to consider this excluded from the trade balance.

There have been large price movements in these trade flows, particularly reflecting oil and commodity price movements. There were particularly strong movements in the price of traded fuels on the quarter, which would be reflected in the current price estimates of exports and imports of goods. In current price terms, total exports rose by 7.4% in Quarter 2 2022, while total imports rose by 4.3% (Figure 7). The annual increase in the implied price in for total exports was 12.8% and total imports of 14.7% in the latest quarter.

Reflecting these movements in prices, total import volumes fell by 1.5% in Quarter 2 2022. There was a 2.5% fall in real imports of goods, driven by falls in unspecified goods and fuels. The volume of services imports increased by 2.1%, particularly in travel, transport, and insurance and pension services. Total export volumes rose by 2.4% in the latest quarter, where the 5.3% increase in exports of goods was driven by machinery and transport equipment; material manufacturers; and chemicals. Services exports fell by 0.6% in Quarter 2 2022, particularly in other business services and transport. This was partially offset by a rise in travel and financial services.

Figure 7: Growth in current price imports and exports was much stronger than in volume terms, reflecting price movements experienced in the UK and internationally

Growths, Quarter 2 (Apr to June) 2022

Figure 7: Growth in current price imports and exports was much stronger than in volume terms, reflecting price movements experienced in the UK and internationally

Growths, Quarter 2 (Apr to June) 2022

Source: Office for National Statistics – GDP first quarterly estimate

Gross capital formation

Gross fixed capital formation (GFCF) rose by 0.6% in Quarter 2 2022 and is now 2.4% above pre-coronavirus pandemic levels. The latest quarterly increase was driven by rises in business investment, whilst government investment fell.

Business investment increased by 3.8% in the latest quarter, following a fall in the previous quarter (Figure 8). Increased investment in other buildings and structures (3.0%); and dwellings (1.2%), was partially offset by falls in investment spending in other machinery and equipment (2.6%); intellectual property rights (1%) and transport equipment (0.9%).

Figure 8: Growth in business investment increased in the latest quarter

Quarter 1 (Jan to Mar) 2019 to Quarter 2 (Apr to June) 2022

Figure 8: Growth in business investment increased in the latest quarter

Quarter 1 (Jan to Mar) 2019 to Quarter 2 (Apr to June) 2022

Source: Office for National Statistics – GDP first quarterly estimate

Notes:

1. Q1 refers to Quarter 1 (Jan to Mar), Q2 refers to Quarter 2 (Apr to June), Q3 refers to Quarter 3 (July to Sept) and Q4 refers to Quarter 4 (Oct to Dec).

Excluding the alignment adjustment, Inventories rose by £1.9 billion in Quarter 2 2022, following a large increase in the previous quarter. This is driven by positive contributions from wholesale, and mining and quarrying.

Table 2: Change in inventories, including and excluding balancing and alignment adjustments
UK, Quarter 1 (Jan to Mar) 2021 to Quarter 2 (Apr to June) 2022

	Change in Inventories	Of which alignment	Of which balancing	Change in Inventories excluding alignment and balancing
2021 Q1 Current price	-172	-536	500	-136
Chained volume measure	672	-498	500	670
2021 Q2 Current price	-3768	-2906		-862
Chained volume measure	-3754	-2777		-977
2021 Q3 Current price	755	906	1000	-1151
Chained volume measure	2011	880	1000	131
2021 Q4 Current price	3426	2536	2500	-1610
Chained volume measure	1290	2395	2500	-3605
2022 Q1 Current price	20936	11369	650	8917
Chained volume measure	16086	10419	500	5167
2022 Q2 Current price	21892	16034		5858
Chained volume measure	16468	14530		1938

Source: Office for National Statistics – GDP first quarterly estimate

Notes

1. Data are in £ millions.
2. Q1 refers to Quarter 1 (Jan to Mar), Q2 2 refers to Quarter 2 (Apr to June), Q3 refers to Quarter 3 (July to Sept) and Q4 refers to Quarter 4 (Oct to Dec).
3. Alignment adjustments typically have a target limit of plus or minus £3,000 million on any quarter. However, in periods where the data sources are particularly difficult to balance, larger alignment adjustments are sometimes needed.

5 . Income

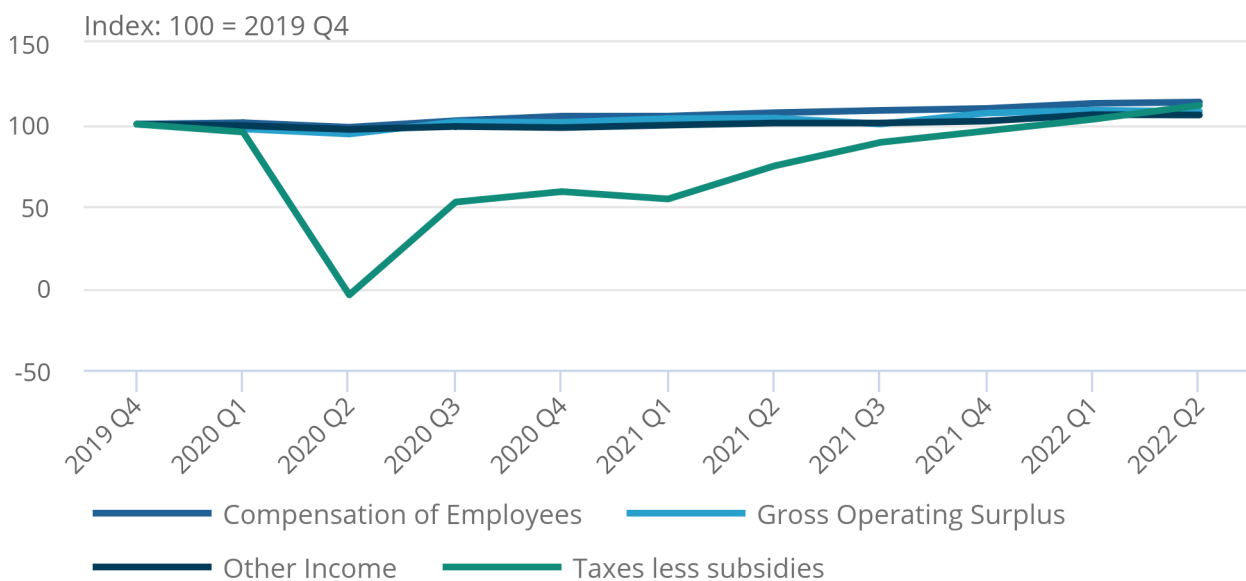

Nominal gross domestic product (GDP) rose by 1.1% in Quarter 2 (Apr to June) 2022, a slowdown from the previous quarter. The quarterly rise was driven by a rise in taxes less subsidies (8.3%), and compensation of employees (0.7%) (Figure 9). Nominal GDP is now 10.5% above pre-coronavirus (COVID-19) pandemic levels.

Figure 9: Nominal GDP increased by 1.1% in Quarter 2 (Apr to June) 2022

UK, Quarter 4 (Oct to Dec) 2019 to Quarter 2 2022

Figure 9: Nominal GDP increased by 1.1% in Quarter 2 (Apr to June) 2022

UK, Quarter 4 (Oct to Dec) 2019 to Quarter 2 2022

Source: Office for National Statistics – GDP first quarterly estimate

Notes:

1. Q1 refers to Quarter 1 (Jan to Mar), Q2 refers to Quarter 2 (Apr to June), Q3 refers to Quarter 3 (July to Sept) and Q4 refers to Quarter 4 (Oct to Dec).
2. Index is referenced to Quarter 4 (Oct to Dec) 2019.
3. Please note, the alignment adjustment is included in the Gross Operating Surplus of nominal GDP.

Taxes rose in Quarter 2 2022, driven by rises in other taxes, while Value Added Tax (VAT) receipts remained flat reflecting the trends in output and expenditure. Subsidies fell in Quarter 2 2022, driven by falls in housing equity injections, partially offset by increased research and development tax credits.

Compensation of employees rose by 0.7% in Quarter 2 2022, a slowdown from the previous quarter. This reflects weaker growth in wages and salaries (0.1%) and social contributions (3.2%). Elsewhere, there was a fall in other income driven by a fall in mixed income resulting from reductions in self-employment income.

Total gross operating surplus (GOS) declined in the latest quarter driven by falls in public and private non-financial corporations but this was after the alignment adjustment had been applied. Before the [alignment adjustment](#), corporations' GOS increased by 1.1%. The rise in Financial corporations' GOS was driven by an increase in the Monetary Financial Corporations sub-sector. This is consistent with recent rises in interest rates by the Bank of England.

Table 3: Gross operating surplus of corporations, including and excluding balancing and alignment adjustments UK, Quarter 1 (Jan to Mar) 2021 to Quarter 2 (Apr to June) 2022

	Gross operating surplus of corporations	Of which alignment	Gross operating surplus of corporations excluding alignment	Gross operating surplus of corporations excluding alignment	Quarter-on-quarter growth
2021 Q1	128782	1595	127187		0.6
2021 Q2	129070	188	128882		1.3
2021 Q3	124587	-4053	128640		-0.2
2021 Q4	132985	2270	130715		1.6
2022 Q1	135068	686	134382		2.8
2022 Q2	134096	-1789	135885		1.1

Source: Office for National Statistics – GDP first quarterly estimate

Notes

1. Data are in £ millions unless labelled otherwise. Growth rates are percentage movements.
2. Q1 refers to Quarter 1 (Jan to Mar), Q2 refers to Quarter 2 (Apr to June), Q3 refers to Quarter 3 (July to Sept) and Q4 refers to Quarter 4 (Oct to Dec).
3. Alignment adjustments typically have a target limit of plus or minus £3,000 million on any quarter. However, in periods where the data sources are particularly difficult to balance, larger alignment adjustments are sometimes needed.

7 . Glossary

Contribution to growth

Contribution to growth indicates how many percentage points a sector or industry is adding or removing from a given growth rate, usually headline gross domestic product (GDP) growth.

Chained volume measure

Data in chained volume measures (CVM) within this bulletin have had the effect of price changes removed (in other words, the data are deflated), except for income data, which are only available in current prices.

Gross domestic product (GDP)

A measure of the economic activity produced by a country or region. Gross domestic product (GDP) growth is the main indicator of economic performance. There are three approaches used to measure GDP:

- the output approach
- the expenditure approach
- the income approach

Index numbers

Data relative to a given base value, which typically refers to a particular year or quarter.

For further definitions, please see the [Glossary of economic terms](#).

8 . Measuring the data

In line with the [National Accounts Revisions Policy](#), data for Quarter 2 (April to June) 2022 are published for the first time, with no revision to previous quarters.

In the Quarterly national accounts publication on 30 September 2022 data will be revised throughout the time series in line with Blue Book 2022. On 27 June 2022 we published Blue Book 2022 indicative [impacts of this change to annual GDP from 1997 to 2019](#). We plan to publish further impacts of these changes on 2020 and at the industry level on 22 August 2022.

Reaching the gross domestic product (GDP) balance

The different data content and quality of the three approaches -- the output approach, the expenditure approach and the income approach -- dictates the approach taken in balancing quarterly data. In the UK, there are more data available on output in the short-term than in either of the other two approaches. However, to obtain the best estimate of GDP (the published figure), the estimates from all three approaches are balanced to produce an average, except in the latest two quarters where the output data takes the lead because of the larger data content.

Quarterly GDP is a balanced measure of the three approaches while the output approach focuses solely on growth in gross value added (GVA) and output as a proxy for GDP. Because of this there is a difference in 2020 and 2021 data (in both levels and growths terms) between the quarterly publications (average GDP) and the [GDP monthly estimate](#) (output approach to GDP). Quarterly GDP is the lead measure of GDP because of its higher data content and inclusion of variables, which enable the conversion from a GVA concept to a GDP basis.

Information on the methods we use for [Balancing the output, income and expenditure approaches to measuring GDP](#) is available.

Alignment adjustments, found in Table M of the [GDP first quarterly estimate data tables](#), have a target limit of plus or minus £3,000 million on any quarter. However, in periods where the data sources are particularly difficult to balance, larger alignment adjustments are sometimes needed as explained in [our recent article, Recent challenges of balancing the three approaches of GDP](#).

In this release, we have faced some additional uncertainty in reconciling the expenditure approach to GDP in particular on these EU trade flows because of recent changes in how some of these data are collated. For these reasons, rather than forcing a GDP balance for expenditure by heavily adjusting the expenditure components, we have decided to show the best estimate of each underlying component at this stage.

In doing so, this means that the alignment adjustment, used to align expenditure to average GDP, is larger than normal (Table 2). This approach preserves the component level movements and shows the level of challenge and uncertainty currently within the expenditure approach to GDP. Work will continue before the next GDP quarterly national accounts release with a focus on the expenditure approach to GDP and we will continue to review this as and when more information becomes available.

To achieve a balanced GDP dataset through alignment, balancing adjustments are applied to the components of GDP where data content is particularly weak in a given quarter because of a higher level of forecast content. The balancing adjustments applied in this estimate are shown in Table 4. The resulting series should be considered accordingly.

Table 4: Balancing adjustments applied to the GDP first quarterly estimate dataset
Quarter 2 (Apr to June) 2022

GDP measurement approach and component adjustment applied to	Q2 2022
Expenditure	
Trade in Services	Current prices 2000

Notes

1. Adjustments are in £ million.

9 . Strengths and Limitations

The UK National Accounts are drawn together using data from many different sources. This ensures that they are comprehensive and provide different perspectives on the economy, for example, sales by retailers and purchases by households. Further information on measuring gross domestic product (GDP) can be found in our [Guide to the UK National Accounts](#) and more quality and methodology information is available in our [Gross domestic product \(GDP\) QMI](#).

Important quality information

There are common pitfalls in interpreting data series, and these include*:

- expectations of accuracy and reliability in early estimates are often too high
- revisions are an inevitable consequence of the trade-off between timeliness and accuracy
- early estimates are based on incomplete data

Very few statistical revisions arise as a result of "errors" in the popular sense of the word. All estimates, by definition, are subject to statistical "error".

Many different approaches can be used to summarise revisions; the "Accuracy and reliability" section in the [Gross domestic product \(GDP\) Quality and Methodology Information](#) analyses the mean average revision and the mean absolute revision for GDP estimates over data publication iterations.

GDP estimates for Quarter 1 (Jan to Mar) 2022 are subject to [more uncertainty than usual](#) as a result of the challenges we faced estimating GDP in the current conditions. Differences in the methods for estimating the output of health and education services across different countries mean GDP may be less internationally comparable during the coronavirus (COVID-19) pandemic and recovery than usual, so should be made with increased caution. For more information, please refer to [our blog, Why has UK GDP fallen so sharply in the pandemic?](#)

[Measuring monthly and quarterly gross domestic product in the coronavirus \(COVID-19\) pandemic](#)

Article | Released 11 November 2021

How we produce monthly and quarterly estimates of UK gross domestic product and why this affects estimating where the economy is relative to its pre-coronavirus (COVID-19) pandemic level.

[International comparisons of GDP during the coronavirus \(COVID-19\) pandemic](#)

Article | Released 1 February 2021

The coronavirus (COVID-19) pandemic has led to record declines in gross domestic product (GDP) in advanced economies in 2020. International comparisons show that the UK has experienced the largest contraction in volume GDP amongst the G7 countries. However, international comparisons have also been complicated by how national statistical institutes record non-market output.

[Coronavirus and the impact on measures of UK government education output: March 2020 to February 2021](#)

Article | Released 31 March 2021

An update on our approach to measuring education output in the UK during the coronavirus (COVID-19) pandemic. Includes a summary of our approach to measuring changes in teaching from March 2020, and the data used to inform our estimates of education output in the UK National Accounts.

1 Estimates are given to the nearest £ million but cannot be regarded as accurate to this degree.

2 Taxes on products less subsidies.

3 Calculated by using gross value added at basic prices minus extraction of crude petroleum and natural gas.

4 Due to challenges in reconciling the quarterly trends with new annuals produced as part of Blue Book 2021 for the oil and gas sector, we have decided to only publish from 2006 onwards. As part of Blue Book 2022, we will continue this transformation and confront the challenges in the oil and gas industry. For more information please refer to the article Impact of Blue Book 2021 changes on quarterly and monthly volume estimates of gross domestic product by industry <https://www.ons.gov.uk/economy/grossdomesticproductgdp/articles/impactofbluebook2021changesonquarterlyand-monthlyvolumeestimatesofgrossdomesticproductbyindustry/2021-09-08>

1 Estimates cannot be regarded as accurate to the last digit shown.

2 Components of output are valued at basic prices, which excludes taxes and includes subsidies on products.

3 Weights may not sum to the total due to rounding.

4 This is a balanced index of UK GVA taking into account data from the Income and Expenditure approaches. Thus it will not necessarily be the weighted sum of the industrial indices.

5 Please note, as part of Blue Book 2021 double-deflated industry-level GVA was introduced for the first time. As a result, volume estimates in the monthly GDP and construction outputs releases will differ from 1997 to 2019 because the construction publication measures the volume of construction work (output), while the GDP series measures GVA (that is, output minus intermediate consumption). Construction GVA estimates from January 2020 will be informed by the construction output release but may not exactly align.

B2 Gross value added at chained volume measures basic prices, by category of output^{1,2}

2019 = 100

1 Estimates cannot be regarded as accurate to the last digit shown.

2 Components of outputs are valued at basic prices, which excludes taxes and includes subsidies on products.

3 Weights may not sum to the total due to rounding.

4 Comprising sections R, S and T of SIC(2007).

1 Estimates are given to the nearest £ million, but cannot be regarded as accurate to this degree.

2 Non-profit institutions serving households.

3 A further breakdown of business investment can be found in the 'Business investment in the UK' bulletin.

4 Quarterly alignment adjustment included in this series.

5 Acquisitions less disposals of valuables can be a volatile series due to the inclusion of non-monetary gold, but any volatility is likely to be GDP neutral as this is offset in UK trade figures.

6 Trade balance is calculated by using exports of goods and services minus imports of goods and services.

7 There is a small difference between the gross operating surplus of the Non-profit Institutions Serving households (NPISH) sector in the Table 6.3.3 of the UK Economic Accounts dataset, compared with the consumption of fixed capital for the NPISH sector published in the GDP release. This difference has been addressed from 2020 Q1. Remaining differences will be corrected when revisions policy allows. The latest figures can be found in the UK Economic Accounts dataset.

C2 Gross domestic product by category of expenditure: chained volume measures¹

1 Estimates are given to the nearest £ million but cannot be regarded as accurate to this degree.

2 Non-profit institutions serving households.

3 A further breakdown of business investment can be found in the 'Business investment in the UK' bulletin.

4 Quarterly alignment adjustment included in this series.

5 Acquisitions less disposals of valuables can be a volatile series due to the inclusion of non-monetary gold, but any volatility is likely to be GDP neutral as this is offset in UK trade figures.

6 Trade balance is calculated by using exports of goods and services minus imports of goods and services.

7 Whilst quality assuring the business investment dataset, a discrepancy was found where annual Non-Seasonally Adjusted CVM data does not equal annual Seasonally Adjusted CVM data for the years 1997 to 2019. This issue affects Business Investment and its component assets. The largest difference in any given year is -£9m in business investment and -£13m in the sub-components. The correct data series to use for the annual timeline is the Non-Seasonally Adjusted series, NPEN.

8 There is a small difference between the gross operating surplus of the Non-profit Institutions Serving households (NPISH) sector in the Table 6.3.3 of the UK Economic Accounts dataset, compared with the consumption of fixed capital for the NPISH sector published in the GDP release. This difference has been addressed from 2020 Q1. Remaining differences will be corrected when revisions policy allows. The latest figures can be found in the UK Economic Accounts dataset.

1 Not including expenditure on dwellings, land and existing buildings and costs associated with the transfer of ownership of non-produced assets.

2 Remaining investment by public non-financial corporations included within business investment.

3 Includes cultivated biological resources (AN.115) and weapons (AN.114).

4 Includes new dwellings and improvements to dwellings.

5 Including costs associated with the transfer of ownership of buildings, dwellings and non-produced assets.

6 The sum of Public Corporations Dwellings and Private Dwellings does not equal Total Dwellings in this table. This will be corrected when we are next open for revision in the Q2 2022 business investment estimates. Neither GFCF nor GDP are affected by this.

1 Not including expenditure on dwellings, land and existing buildings and costs associated with the transfer of ownership of non-produced assets.

2 Remaining investment by public non-financial corporations included within business investment.

3 Includes cultivated biological resources (AN.115) and weapons (AN.114)

4 Includes new dwellings and improvements to dwellings.

5 Including costs associated with the transfer of ownership of buildings, dwellings and non-produced assets.

6 Whilst quality assuring the business investment dataset, a discrepancy was found where annual Non-Seasonally Adjusted CVM data does not equal annual Seasonally Adjusted CVM data for the years 1997 to 2019. This issue affects Business Investment and its component assets. The largest difference in any given year is -£9m in business investment and -£13m in the sub-components. The correct data series to use for the annual timeline is the Non-Seasonally Adjusted series, NPEN.

7 During quality assurance of the ANA21 GFCF dataset, an issue has been identified that affects the chained volume measure of costs of ownership transfer of non-produced assets in the private sector and the public corporations sector. As a result, £175 million has been erroneously removed from public corporations and added to the private sector estimate for costs of ownership transfer of non-produced assets in 2019.

8 The sum of Public Corporations Dwellings and Private Dwellings does not equal Total Dwellings in this table. This will be corrected when we are next open for revision in the Q2 2022 business investment estimates. Neither GFCF nor GDP are affected by this.

¹ The residual error is, by convention, the amount by which the expenditure-based approach to measuring GDP exceeds the income-based estimate. It is also the sum of two components: the statistical discrepancy (expenditure) with sign reversed, and the statistical discrepancy (income) with natural sign.

² Income data deflated by the implied GDP deflator, based on expenditure data.

³ The growth rates of index numbers are calculated using unrounded data.

1 Financial year £ millions estimates are the sum of the 4 quarters which make up that financial year.

2 All data are seasonally adjusted unless otherwise specified.

3 Implied deflator is expressed in terms of 2021/2022 = 100 for presentational purposes, whereas in table A1 it is expressed as 2019 = 100.

4 Implied deflator is displayed with 4 decimal places to replace a GDP deflator in index form series previously calculated by HM Treasury. Data are only considered accurate to 1 decimal place.

1 This data uses the latest population estimates with the exception of the latest year where populations projections are used. The quarterly data in this table does not sum to annuals (excluding GDP at market prices)

2 This data uses the UK resident population mid-year estimates published 25 June 2021

3 GDP is presented in £ million; also published in table A2

1 Estimates are accurate to 1 decimal place and contributions are available from 1997. Output data are available from 1990 in table B1.

2 Contribution are to output gross value added and therefore may not sum to the percentage change in average GDP. More information on the difference between the 3 measures can be found in the Short Guide to National Accounts.

3 For the most accurate figures on construction, please refer to the Construction output in Great Britain release.

4 Please note, as part of Blue Book 2021 double-deflated industry-level GVA was introduced for the first time. As a result, volume estimates in the monthly GDP and construction outputs releases will differ from 1997 to 2019 because the construction publication measures the volume of construction work (output), while the GDP series measures GVA (that is, output minus intermediate consumption). Construction GVA estimates from January 2020 will be informed by the construction output release but may not exactly align.

1 Estimates are accurate to 1 decimal place and contributions are available from 1997. Expenditure data are available from 1948 annually and 1955 quarterly in table C2

2 This table does not include contribution from the statistical discrepancy and components may not sum to the percentage change in average GDP. Chained volume measure data for this component are available in table C2

3 Non-profit institutions serving households

4 Whilst quality assuring the business investment dataset, a discrepancy was found where annual Non-Seasonally Adjusted CVM data does not equal annual Seasonally Adjusted CVM data for the years 1997 to 2019. This issue affects Business Investment and its component assets. The largest difference in any given year is -£9m in business investment and -£13m in sub-components. The correct data series to use for the annual timeline is the Non-Seasonally Adjusted series, NPEN.
