1 . Main points

- Monthly construction output is estimated to have increased 0.8% in volume terms in October 2022; this is the fourth consecutive monthly growth, with October 2022 being the highest level of construction output (£15,248 million) since records began in January 2010.
- Anecdotal evidence continues the narrative around the increased prices for certain construction products, however annual price growth is starting to ease from the high level in mid-2022; despite the current high prices, the construction industry is maintaining growth, and new orders books remain strong (see detail about these data in [Section 2: Construction in Great Britain data](#))
- The increase in monthly construction output in October 2022 came from increases in both new work (0.5%) and repair and maintenance (1.3%) on the month.
- At the sector level, five out of the nine sectors saw a rise in October 2022, with the main contributors to the monthly increase seen in private new housing, and non-housing repair and maintenance, which increased 2.9% and 1.7%, respectively.
- The level of construction output in October 2022 was 4.8% (£698 million) above the February 2020 pre-coronavirus (COVID-19) pandemic level; new work was 0.2% (£21 million) above its February 2020 level, while repair and maintenance work was 13.5% (£677 million) above the February 2020 level.
- Alongside the monthly increase, construction output saw an increase of 1.1% in the three months to October 2022; this is the twelfth consecutive period of growth in the three-month-on-three-month series, and the increase came solely from growth in new work (3.1%) as repair and maintenance saw a decrease (2.1% fall).

This release is a headline-only bulletin as we review the content we publish. We will revert back to a fuller release for the next publication on 13 January 2023. We welcome any feedback at construction.statistics@ons.gov.uk.

2 . Construction in Great Britain data

[Output in the construction industry](#)

Dataset | Released 12 December 2022

Monthly construction output for Great Britain at current price and chained volume measures, seasonally adjusted by public and private sector.

[Output in the construction industry: sub-national and sub-sector](#)

Dataset | Released 11 November 2022

Quarterly non-seasonally adjusted type of work and regional data at current prices, Great Britain.

[Construction output price indices](#)

Dataset | Released 11 November 2022

A summary of the Construction Output Price Indices (OPIs) from July to September 2022, UK

[New orders in the construction industry](#)

Dataset | Released 11 November 2022

Quarterly new orders at current price and chained volume measures, seasonally adjusted by public and private sector. Quarterly non-seasonally adjusted type of work and regional data.

[Construction statistics annual tables](#)

Dataset | Released 18 November 2022

The construction industry in Great Britain, including value of output and type of work, new orders by sector, number of firms and total employment.

[Output in the Construction Industry – Customise my data](#)

Dataset | Released 12 December 2022

Customise My Data (CMD) is ONS' new way of providing filterable, explorable data suitable to individual user needs. Monthly construction output for Great Britain at current price and chained volume measures, seasonally adjusted by public and private sector.

3 . Glossary

Construction output estimates

Construction output estimates are monthly estimates of the amount of output chargeable to customers for building and civil engineering work done in the relevant period, excluding Value Added Tax (VAT) and payments to subcontractors.

Seasonally adjusted estimates

Seasonally adjusted estimates are derived by estimating and removing calendar effects (for example, leap years such as 2020) and seasonal effects (for example, decreased activity at Christmas because of site shutdowns) from the non-seasonally adjusted estimates.

Value estimates

The value estimates reflect the total value of work that businesses have completed over a reference month.

Volume estimates

The volume estimates are calculated by taking the value estimates and adjusting to remove the impact of price changes.

4 . Measuring the data

Quality and methodology

More quality and methodology information (QMI) is available in our:

- [Construction output QMI](#)
- [Construction output price indices QMI](#)

Reasons for revisions in this release

In line with the national accounts revision policy, there are no revisions to previously published data, and October 2022 is being produced for the first time.

For further information on the revisions profile, see our [Output in the construction industry – revisions triangle \(one-month growth\) dataset](#) and our [Output in the construction industry – revisions triangle \(three-month growth\) dataset](#).

Sub-national and sub-sector construction output

Data on new orders supplied by [Barbour ABI](#) are used to model the breakdown of the overall output figures for Great Britain into the lower level and regional data seen in Tables 1 and 2 of our [Output in the construction industry: sub-national and sub-sector](#) dataset.

Bias adjustment

Typically, since the move to monthly GDP estimates, an [adjustment](#) to address any bias in survey responses for construction output is applied to the early construction output monthly estimates.

While the response rate for October 2022 has improved and is nearing comparable pre-coronavirus (COVID-19) pandemic levels of response, it is still below this level, so we have not applied a bias adjustment for October 2022.

Differences with Monthly GDP construction estimates

In Blue Book 2021, [a new framework](#) was introduced to improve how we produce volume estimates of gross domestic product (GDP) for balanced years as part of the supply and use process. This framework included the implementation of double-deflated industry-level gross value added (GVA) for the first time. This improvement was reflected in our [GDP quarterly national accounts, UK: April to June 2021](#) release and our [GDP monthly estimate, UK: August 2021](#) release for the first time.

As a result, volume estimates in the monthly GDP and construction outputs releases will differ for the period 1997 to 2020 because the construction publication measures the volume of construction work (output), while the GDP series measures GVA (that is, output minus intermediate consumption). Construction estimates will align, however, from January 2021 onwards on a growth basis.

Articles on the [impact of double deflation](#) and [Blue Book changes](#) provide information and indicative effects of this change to industry-level GVA volume.

5 . Related links

[Construction statistics: sources and outputs](#)

Methodology | Last revised 18 November 2022

A list of the known sources of information available on the construction industry and their outputs.

[GDP monthly estimate, UK: October 2022](#)

Bulletin | Released 12 December 2022

Gross domestic product (GDP) measures the value of goods and services produced in the UK. It estimates the size of and growth in the economy.

[Index of Services, UK: October 2022](#)

Bulletin | Released 12 December 2022

Movements in the volume of output for the UK services industries. Figures are seasonally adjusted.

[Index of Production, UK: October 2022](#)

Bulletin | Released 12 December 2022

Movements in the volume of production for the UK production industries: manufacturing, mining and quarrying, energy supply, and water and waste management.

[Construction statistics, Great Britain: 2021](#)

Bulletin | Released 18 November 2022

Statistics on the construction industry, including value of output, new orders by sector, number of firms and total employment, insolvencies and construction Output Price Indices.

[Business insights and impact on the UK economy: 1 December 2022](#)

Bulletin | Released 1 December 2022

The impact of challenges facing the economy and other events on UK businesses. Based on responses from the voluntary fortnightly business survey (BICS) to deliver real-time information to help assess issues affecting UK businesses and economy, including financial performance, workforce, trade, and business resilience.

[Price movements in construction materials and plant hire: 2019 to 2021](#)

Bulletin | Released 20 October 2021

Price movements of construction materials and plant hire between 2019 and 2021 and their causes: a brief overview of construction in the UK, construction output indices and how these are computed, and construction inputs and their price movements and the factors behind them.

[Productivity in the construction industry, UK: 2021](#)

Bulletin | Released 19 October 2021

An investigation into productivity growth and its drivers for the UK construction industry.

[The rise of the UK warehouse and the "golden logistics triangle"](#)

Article | Released 11 April 2022

A focus on the transport, logistics and warehousing industry and its importance for the UK and local economies. The analysis will look at changes over the last decade and since coronavirus (COVID-19).

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

2B.M CONSTRUCTION OUTPUT: VOLUME NON-SEASONALLY ADJUSTED BY SECTOR

£ million

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

4A.M CONSTRUCTION OUTPUT: VALUE SEASONALLY ADJUSTED CURRENT PRICES BY SECTOR

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

4M CONSTRUCTION OUTPUT: VALUE NON-SEASONALLY ADJUSTED CURRENT PRICES BY SECTOR

£ million

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

3MOYSA CONSTRUCTION OUTPUT: VOLUME SEASONALLY ADJUSTED PERCENTAGE CHANGE 3 MONTHS ON SAME PERIOD A YEAR EARLIER

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.
