- [Earnings and employment from Pay As You Earn Real Time Information, UK](#)

## 2 . Main points for February to April 2023

- Growth in employees' average total pay (including bonuses) was 6.5% and growth in regular pay (excluding bonuses) was 7.2% in February to April 2023; for regular pay this is the largest growth rate seen outside of the coronavirus (COVID-19) pandemic, where in April to June 2021 the growth rate was 7.3%.
- Growth in total and regular pay fell in real terms (adjusted for inflation) on the year in February to April 2023, by 2.0% for total pay and 1.3% for regular pay.
- In February to April 2023, average regular pay growth for the private sector was 7.6%, this is the largest growth rate seen outside of the pandemic period; for the public sector this was 5.6%, a larger growth rate was last seen in August to October 2003 (5.7%).
- The finance and business services sector saw the largest regular growth rate at 9.2%, followed by the manufacturing sector at 7.0%; this is the highest regular growth rate we have seen for the manufacturing sector since comparable records began in 2001.

The estimates in this bulletin come from a survey of businesses. It is not possible to survey every business each month, so these statistics are estimates based on a sample, not precise figures.

### 3 . Analysis of average weekly earnings (AWE)

Figure 1: Average weekly earnings for total pay was £648 and for regular pay was £603 in April 2023, showing a steady increase over time (except for early on in the coronavirus pandemic)

Average weekly earnings in Great Britain, seasonally adjusted, January 2000 to April 2023

Figure 1: Average weekly earnings for total pay was £648 and for regular pay was £603 in April 2023, showing a steady increase over time (except for early on in the coronavirus pandemic)

Average weekly earnings in Great Britain, seasonally adjusted, January 2000 to April 2023

Source: Monthly Wages and Salaries Survey from the Office for National Statistics

Average weekly earnings were estimated at £648 for total pay and £603 for regular pay in April 2023. Figure 1 shows that average weekly earnings have steadily increased, with the exception of the early months of the coronavirus (COVID-19) pandemic.

## Figure 2: Both real total and regular pay fell on the year

Average weekly earnings annual growth rates in Great Britain, seasonally adjusted, January to March 2001 to February to April 2023

### Figure 2: Both real total and regular pay fell on the year

Average weekly earnings annual growth rates in Great Britain, seasonally adjusted, January to March 2001 to February to April 2023

Source: Monthly Wages and Salaries Survey from the Office for National Statistics

Growth in employees' average total pay (including bonuses) was 6.5% and growth in regular pay (excluding bonuses) was 7.2% in February to April 2023. For regular pay this is the largest growth rate seen outside of the coronavirus (COVID-19) pandemic where in April to June 2021 the growth rate was 7.3%, when the data were affected by [base and compositional effects](#).

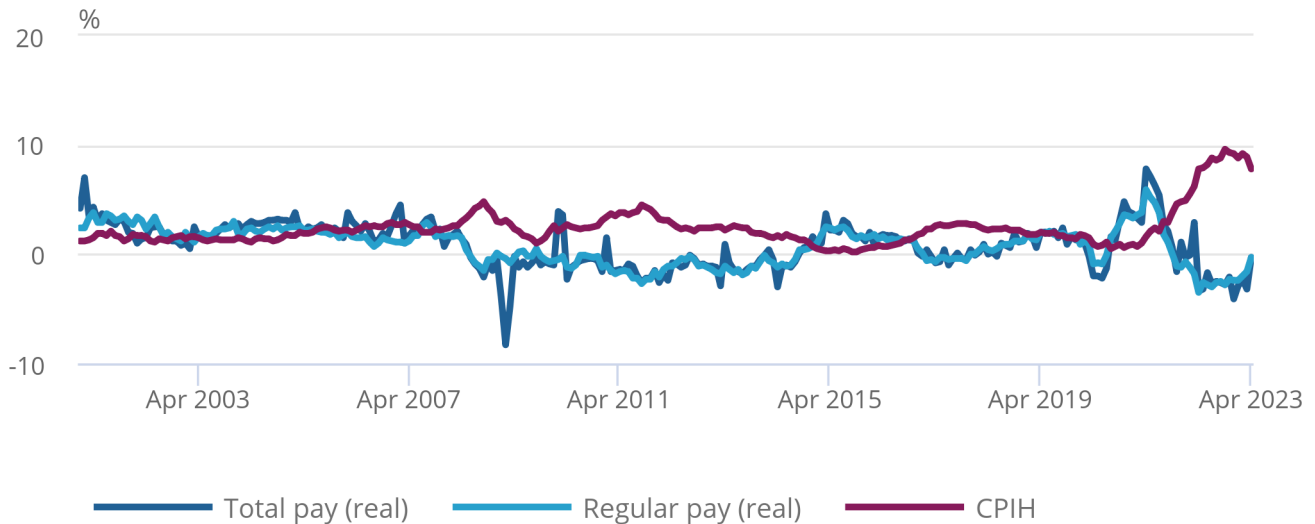

In real terms (adjusted for inflation), in February to April 2023, total pay fell by 2.0% on the year and regular pay fell by 1.3% on the year.

### Figure 3: High inflation is causing real pay growth rates to fall on the year

Real average weekly earnings single-month annual growth rates in Great Britain, seasonally adjusted, and CPIH annual rate, January 2001 to April 2023

## Figure 3: High inflation is causing real pay growth rates to fall on the year on the year

Real average weekly earnings single-month annual growth rates in Great Britain, seasonally adjusted, and CPIH annual rate, January 2001 to April 2023

Source: Monthly Wages and Salaries Survey, and Consumer price inflation from The Office for National Statistics

The difference between nominal and real growth rates is because of higher than usual Consumer Prices Index including owner occupiers' housing costs (CPIH). For the three months of February to April 2023, CPIH was an average of 8.6%. Figure 3 shows a comparison of monthly real total and regular pay growth rates and monthly inflation.

Our recommended measure of inflation is CPIH. However, we also publish our [supplementary real earnings dataset](#) using the Consumer Prices Index (CPI) excluding owner occupiers' housing costs. Using CPI real earnings, in February to April 2023, total pay fell by 3.0% on the year and regular pay fell by 2.3% on the year.

The [Earnings and employment from Pay As You Earn Real Time Information, UK bulletin](#) also provides additional insights into the estimate of growth in median and mean pay, and the two data sources generally trend well for mean total pay. A more timely estimate of median pay is also provided but is subject to revisions.

## Sector and industry

### Figure 4: For the latest period both the private and public sector has seen strong regular growth

Average weekly earnings annual growth rates for total pay (including bonuses) and regular pay by public and private sector in Great Britain, seasonally adjusted, January to March 2001 to February to April 2023

### Figure 4: For the latest period both the private and public sector has seen strong regular growth

Average weekly earnings annual growth rates for total pay (including bonuses) and regular pay by public and private sector in Great Britain, seasonally adjusted, January to March 2001 to February to April 2023

Source: Monthly Wages and Salaries Survey from the Office for National Statistics

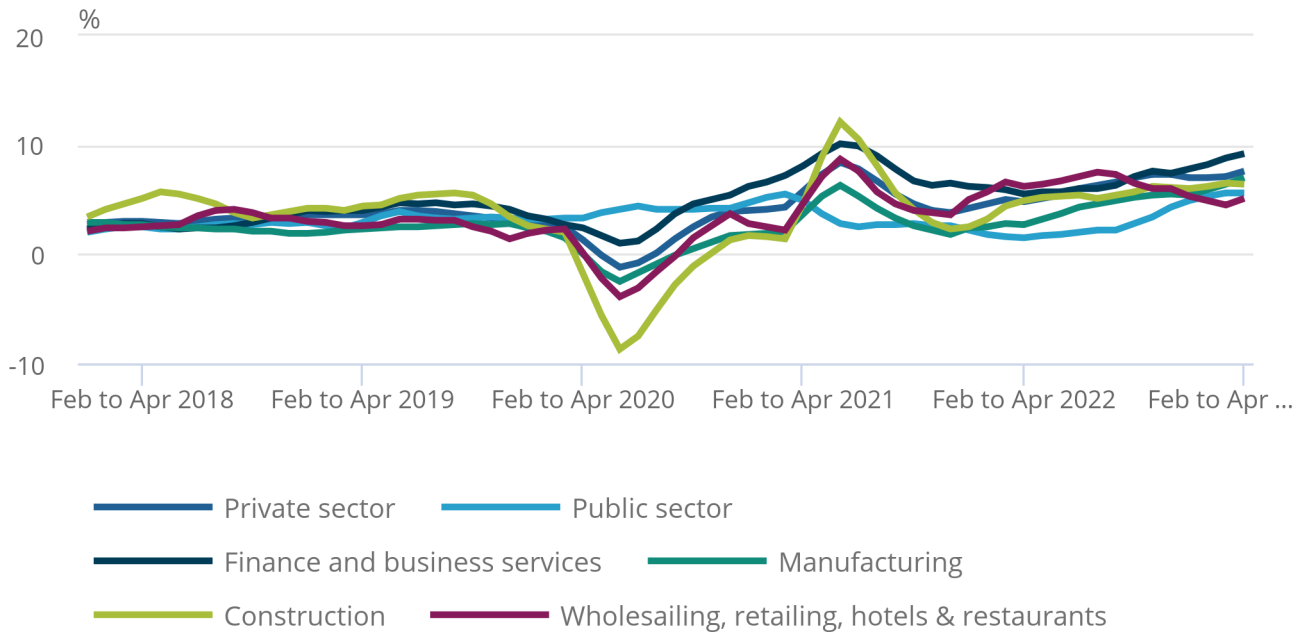

Average regular pay growth was 7.6% for the private sector in February to April 2023, and 5.6% for the public sector (Figure 4). The growth for the public sector was similar to the previous three-month period and a larger growth was last seen in August to October 2003 when it was 5.7%. For the private sector this is the largest regular growth rate seen outside the coronavirus pandemic period, where during this period the growth rate peaked at 8.4% in April to June 2021 and 7.8% in May to July 2021, when the data were affected by [compositional and base effects](#).

## Figure 5: In the latest period the finance and business services sector saw the largest regular growth rate

Average weekly earnings annual growth rates for regular pay by sector in Great Britain, seasonally adjusted, November 2017 to January 2018 to February to April 2023

### Figure 5: In the latest period the finance and business services sector saw the largest regular growth rate

Average weekly earnings annual growth rates for regular pay by sector in Great Britain, seasonally adjusted, November 2017 to January 2018 to February to April 2023

Source: Monthly Wages and Salaries Survey from the Office for National Statistics

In February to April 2023, the finance and business services sector saw the largest regular growth rate at 9.2%, this is the highest regular growth rate seen outside of the pandemic period. Followed by the manufacturing sector at 7.0%, this is the highest growth rate we have seen for the manufacturing sector since comparable records began in 2001 (Figure 5).

## 4 . Average weekly earnings data

### [Average weekly earnings](#)

Dataset EARN01 | Released 13 June 2023

Average weekly earnings at sector level headline estimates, Great Britain, monthly, seasonally adjusted. Monthly Wages and Salaries Survey.

### [Average weekly earnings by sector](#)

Dataset EARN02 | Released 13 June 2023

Average weekly earnings at sector level including manufacturing, finance and services, Great Britain, monthly, non-seasonally adjusted. Monthly Wages and Salaries Survey.

### [Average weekly earnings by industry](#)

Dataset EARN03 | Released 13 June 2023

Average weekly earnings at industry level including manufacturing, construction and energy, Great Britain, monthly, non-seasonally adjusted. Monthly Wages and Salaries Survey.

### [X09: Real Average weekly earnings using Consumer price inflation](#)

Dataset X09 | Released 13 June 2023

Average weekly earnings for the whole economy, for total and regular pay, in real terms (adjusted for consumer price inflation), UK, monthly, seasonally adjusted.

## 5 . Glossary

### Average Weekly Earnings (AWE)

As explained in our [guide to labour market statistics methodology](#), Average Weekly Earnings (AWE) is the lead monthly measure of average weekly earnings per employee. It is calculated using information based on the Monthly Wages and Salaries Survey (MWSS), which samples around 9,000 employers in Great Britain.

The estimates are not just a measure of pay rises. They do not, for example, adjust for changes in the proportion of the workforce who work full time or part time, or other compositional changes within the workforce. The estimates do not include earnings of self-employed people.

Estimates are available for both total pay (which includes bonus payments) and regular pay (which excludes bonus payments). Estimates are available in both nominal terms (not adjusted for inflation) and real terms (adjusted for inflation).

Estimates of pay growth are also published using HM Revenue and Customs' (HMRC) data in the [Earnings and employment from Pay As You Earn Real Time Information, UK bulletin](#).

The HMRC estimates are presented in median pay terms, but they also include mean pay, as does AWE. There are some differences between the sources, most notably that the HMRC estimates include any redundancy payments that are made through payroll. Further detail is provided in our [Comparison of labour market data sources methodology](#).

### Bonus

A bonus is a form of reward or recognition granted by an employer. When an employee receives a bonus payment, there is no expectation or assumption that the bonus will be used to cover any specific expense. The value and timing of a bonus payment can be at the discretion of the employer or stipulated in workplace agreements.

## Consumer Prices Index including owner occupiers' housing costs

As of 21 March 2017, the [Consumer Prices Index including owner occupiers' housing costs \(CPIH\), as detailed in our methodology](#) became our lead measure of inflation. It is our most comprehensive measure of UK consumer price inflation.

## Monthly Wages and Salaries Survey

The Monthly Wages and Salaries Survey (MWSS) is a survey through which we collect information on wages and salaries. It is distributed monthly to around 9,000 employers, covering around 12.8 million employees.

A [more detailed glossary](#) is available.

## 6 . Measuring the data

This section provides more detail around the methodology of the survey. Further information on this is available in our [Average weekly earnings quality and methodology information \(QMI\)](#).

The survey response rate was 82%, which is now back to the level seen in the months before the coronavirus (COVID-19) pandemic.

### Real earnings

The real Average Weekly Earnings (AWE) is calculated as the non-seasonally adjusted AWE (shown in our [accompanying dataset EARN02](#)) divided by the Consumer Prices Index including owner occupiers' housing costs (CPIH), which is our preferred measure of consumer price inflation (as shown in our [CPIH Index time series L522](#)). The ratio is then referenced as an index with 2015 equals 100, and seasonally adjusted.

We also publish a dataset on real average weekly earnings, using Consumer Price Inflation (CPI) for the whole economy, for both total and regular pay (X09). Our recommended measure of CPI is CPIH, and our headline estimates using this measure are found in our [accompanying dataset EARN01](#). These data have been compiled using the CPI as a supplementary dataset to view alongside the headline estimates produced using the CPIH.

### Arrears payment

Pay award arrears are collected separately on the questionnaire; this specifically covers earnings arising from a backdated pay increase, not late payment of overtime or bonuses. Arrears payments are reflected in estimates at the time they were paid, and not in the period they are awarded for, therefore backseries are not revised. The AWE headline estimates exclude arrears payments.

### Seasonal adjustment

Total pay, bonus pay and regular pay (excluding bonuses) for each sector (a total of 27 series) are seasonally adjusted using X13-ARIMA. Percentage changes are then derived from the seasonally adjusted average pay series.

Each of the 27 series is seasonally adjusted separately, to ensure the optimum seasonal adjustment of each series. The result of this is that relationships that hold in the unadjusted series do not necessarily hold for the seasonally adjusted series. For example, before seasonal adjustment, regular pay plus bonus pay equalled total pay, whereas after seasonal adjustment, they are not necessarily equal.

When there is an exceptionally large change in the series, this can lead to larger differences between regular pay plus bonus pay, and total pay. We saw this in March 2022, when there were very large bonus payments. Consequently, the direct seasonal adjustment method, which allows for evolving seasonality, caused a larger than normal difference. This is supported by other similar instances such as February 2007 and February 2008.

## Interpreting average earnings - base and compositional effects

Interpreting average earnings data over the last year has been difficult. Our [How COVID-19 has impacted the Average Weekly Earnings data blog post](#) explains the complexities of interpreting these data. There were temporary factors that we refer to as base and compositional effects.

The base effect refers to comparing two periods with different circumstances. Throughout the coronavirus (COVID-19) pandemic, different scenarios have affected the base effect. More information on base effects can be found in our [Average weekly earnings in Great Britain: May 2022 bulletin](#).

The compositional effect means pay growth has been affected by a changing composition of employee jobs, which during the coronavirus pandemic had increased average pay. The latest data show that the composition effect is now at more normal levels, and we are no longer seeing the excessive levels we saw during periods of the coronavirus pandemic in 2020 and 2021. Our [How furlough and changes in the employee workforce have affected earnings growth during the coronavirus \(COVID-19\) pandemic, UK: 2020 to 2021 article](#) looks in more detail at the impact of compositional effects on wage growth.

Following the initial impact of the coronavirus pandemic, the change in pay growth was heavily affected by a changing composition of employee jobs, where we saw a fall in the number and proportion of lower-paid employee jobs. This changing composition naturally increased average pay and should be kept in mind when interpreting average pay growth. Changes in the profile of employee jobs in the economy will affect average pay growth. A decrease in employee numbers in jobs that have lower pay can have an upward effect on average pay, and the other way around.

More information on the compositional effect on the data is available in the [Measuring the data section of the Earnings and employment from Pay As You Earn Real Time Information, UK: May 2022 bulletin](#).

Sampling variability for average weekly earnings single-month growth rates in percentage points is also available in the [April 2022 edition of this bulletin](#).

Our [Comparison of labour market data sources methodology](#) discusses some of the main differences between our data sources.

More information on measuring the data is available in our [Average weekly earnings in Great Britain: April 2021 bulletin](#).

## Making our published spreadsheets accessible

Following the [Government Statistical Service \(GSS\) guidance on releasing statistics in spreadsheets](#), we will be amending our published tables over the coming months to improve usability, accessibility and machine readability of our published statistics. To help users change to the new formats, we will be publishing sample versions of a selection of our tables. Where practical, we will initially publish the tables in both the new and current formats. If you have any questions or comments, please email [labour.market@ons.gov.uk](mailto:labour.market@ons.gov.uk).

## 7 . Strengths and limitations

Information on the strengths and limitations of this bulletin is available in:

- our [Average weekly earnings in Great Britain: April 2021 bulletin](#)
- our [A guide to labour market statistics methodology](#)
- our [Income and earnings statistics guide methodology](#)
- the [Government Statistical Service Income and earnings interactive dashboard](#)

1. Estimates of total pay include bonuses but exclude arrears of pay.

2. The three month average figures are the changes in the average seasonally adjusted values for the three months ending with the relevant month compared with the same period a year earlier.

3. Estimates of real earnings are calculated by deflating the nominal earnings estimates by the Consumer Prices Index including owner occupiers' housing costs (CPIH), our preferred measure of consumer price inflation.
