1 . Main points

- The number of businesses added to the Inter-Departmental Business Register (IDBR) (business creations) in the UK in Quarter 2 (Apr to June) 2023 was 14% lower than in Quarter 2 2022.
- There was a decrease in creations in 14 out of 16 main industrial groups in Quarter 2 2023 compared with Quarter 2 2022, with the most significant decrease coming from transport and storage.
- The number of businesses removed from the IDBR (business closures) in the UK in Quarter 2 2023 was 15% lower than in Quarter 2 2022.
- There was a decrease in the number of closures in 14 out of 16 main industrial groups in Quarter 2 2023, compared with Quarter 2 2022; the most significant decrease came from professional, scientific and technical activities.
- Q2 2023 is the eighth quarter in a row where there have been more closures than creations.
- Data in this release are [experimental](#) statistics; our [annual business demography publication](#) remains the best source of information on business demography.

Quarterly data in this release are not entirely consistent with the annual business demography publication, which is a more accurate reflection of business births and deaths. The quarterly data in this release are generally in line with the annual publication and provide new evidence using new methods. See [Section 6: Measuring the data](#) of this release for information on the methods used.

2 . Business creations

Business creations are new enterprise entries in the Inter-Departmental Business Register (IDBR). These are referred to as business births in our [annual Business Demography, UK bulletins](#) and other data. For more information, see [Section 6: Measuring the data](#), and [Section 5: Glossary](#) of this bulletin.

The number of IDBR business creations in the UK in Quarter 2 (Apr to June) 2023 was 77,095. This figure is 14% lower than the number of business creations in Quarter 2 2022. It is the second lowest number of business creations in a second quarter since the start of this series in 2017.

The number of business creations decreased in 14 out of 16 industry groups during this quarter, compared with Quarter 2 2022. The most significant decrease came in the transport and storage industry, where business creations were down by 59%. Within transport and storage, the two main industries driving the decrease were freight transport by road (down 53%) and unlicensed carriers (down 83%).

3 . Business closures

Business closures are those removed from the Inter-Departmental Business Register (IDBR). A business is removed from the IDBR if its turnover and employment are zero for several periods, or if the Office for National Statistics (ONS) is notified that the business has ceased trading through an administrative or survey source.

The number of business closures in the UK in Quarter 2 (Apr to June) 2023 was 84,150. This is 15% lower than in Quarter 2 2022, with 14 out of 16 main industrial groups showing a decrease in closures.

The most significant decrease in closures came in the professional, scientific and technical industry (down 25%). This is now the eighth quarter in a row where there have been more closures than creations.

[Business demography, quarterly experimental statistics, low-level geographic breakdown, UK](#)

Dataset | Released 27 July 2023

Experimental quarterly statistics on business creations or births and closures or deaths from the Inter-Departmental Business Register (IDBR), a low-level geographic breakdown for the UK.

5 . Glossary

Business

For this release, the term "business" is used to represent an enterprise. An enterprise can be defined as the smallest combination of legal units that is an organisational unit producing goods or services, that benefits from a certain degree of autonomy in decision-making, especially for the allocation of its current resources. An enterprise carries out one or more activities at one or more locations. An enterprise may also be a sole legal unit.

Business creations

Often referred to as business births, we refer to enterprises added to the Inter-Departmental Business Register (IDBR) as business creations in this release. Enterprises are added to the IDBR when a new business is identified from administrative sources (usually the Value Added Tax (VAT) or Pay As You Earn (PAYE) systems).

Business closures

Business closures are removals from the IDBR. A business is removed from the IDBR if its turnover and employment are zero for several periods, or the Office for National Statistics (ONS) is notified that the business has ceased trading. These are referred to as business deaths in [our annual Business Demography, UK bulletins](#) and other data.

The Inter-Departmental Business Register (IDBR)

A database of all businesses in the UK registered for VAT or the PAYE income tax system. There are approximately 2.8 million businesses on the IDBR. The IDBR is the register of UK businesses used as a sampling frame for ONS business surveys.

Turnover and employment data

The turnover data on the IDBR are mostly derived from VAT or the ONS business survey records. Employment data on the IDBR are derived from PAYE or ONS business survey records. In some cases, values are imputed from administrative data. The turnover data are updated annually, every September, from available data. Employment data are updated more frequently for some businesses but at least annually for all businesses.

The turnover and employment data for business closures are the stored values at the last update while the business was active on the IDBR. Often this is the last annual update. These figures are not adjusted for inflation, so the average turnover would be expected to rise slowly over time in line with inflation.

For business creations, the value for turnover is usually that estimated by the business upon registration with HM Revenue and Customs (HMRC) for VAT. The employment value is the number of registered employees on their PAYE scheme if they have one, and it is imputed if they do not. This value is revised on the IDBR when more up-to-date data are received, but it is not revised in these statistics.

Data on turnover and employment on the IDBR should not be used to measure economic growth or the growth of the labour market. Other ONS sources should be used for this. Data points are generally current for larger businesses, but less current for smaller businesses.

6 . Measuring the data

Experimental Statistics

The statistics presented are [Experimental Statistics](#), so care needs to be taken when interpreting them.

Please note that in this bulletin, we have used the term "most significant" to mean changes that have been identified by weighting percentage movements of business creations and closures by the absolute difference in the change and ordering them by industry.

Since our [Quarter 4 \(Oct to Dec\) 2022 bulletin](#), businesses that do not have either Value Added Tax (VAT) or Pay As You Earn (PAYE), but do have a live company number, have been removed from the figures. They have been removed because they can misrepresent business creation and closure figures.

We create these enterprises on the Inter-Departmental Business Register (IDBR) to monitor them, usually because they help to give the full picture on the enterprise group. Often these businesses do not have employment or turnover figures, but have some role in the enterprise group, such as the parent of the enterprise group. Most of our business surveys exclude these cases, and they are now also excluded from both annual and quarterly business demography results.

Additional geographical breakdowns

From our Quarter 4 2021 bulletin, additional geographical breakdowns of business creations and closures have been made available to meet user needs. An unspecified geography category has also been introduced to deal with the distorting effect of multiple registrations at the same site. These apply where there are over 250 creations or closures at the same postcode. Any creations or closures that happen at one of these postcodes are taken out of their geography and placed into the unspecified category. These cases still count towards the UK totals. The figures are provided in the data workbook published as part of this statistical release.

Time of recording

Business creations and closures in these data are based on the date on which the action occurs on the IDBR. Data for this release are extracted from the IDBR quarterly.

The date a business is added to the IDBR is generally on the same day, or within a few days, of the legal creation of the business as a company with Companies House. However, this can be several weeks after the effective birth of the business.

For business closures, the registration process can take a little longer because the death of a business may be long and complex. The effective death of a business may occur several months before its actual death from a legal perspective. A business is removed from the IDBR if information from HM Revenue and Customs (HMRC), Office for National Statistics (ONS) business surveys, or Companies House indicates it is no longer active. The ONS proves deaths by contacting businesses if necessary.

Frequency of data

The IDBR is updated from four main sources:

- Value Added Tax (VAT)
- Pay As You Earn (PAYE)
- ONS business surveys
- Companies House

The updates occur in various frequencies from daily to annual. A shorter time period analysis of business creations and closures would be very volatile because the PAYE update is quarterly. As such, this source is best suited to quarterly publications.

Timeliness

In line with international guidance from Eurostat and the Organisation for Economic Co-operation and Development (OECD), [our annual Business Demography, UK bulletins](#) are published a year after the reference period to allow for reactivations before deaths figures are calculated. We have published these quarterly data to provide a timelier indicator of business creations and closures to support understanding of the impact of the coronavirus (COVID-19) pandemic on the UK economy. However, these data will not be entirely consistent with our annual bulletin, and that remains the superior measure of business demography.

Comparison with the deaths figures produced for the 2021 annual demography figures, published by the ONS on 17 November 2022, showed that the quarterly figures were overestimating deaths because of reactivations. Reactivations arise as later information on business turnover or employment is received.

From our [Quarter 4 2022 bulletin](#), we have introduced a method to take account of reactivations in business deaths. A similar, but smaller, issue occurs with births, when false births are removed by later IDBR processes. Using revised datasets taken a year after the original data were extracted from the IDBR, we have calculated an average reduction percentage to create more accurate early estimates. For this release we have applied a 10.5% reduction to business closures and a 2.9% reduction to business creations for Quarter 3 (July to Sept) and Quarter 4 of 2022, and Quarter 1 (Jan to Mar) and Quarter 2 (Apr to June) 2023.

It is standard practice to revise the births and deaths figures from the same quarter a year ago, recalculate the adjustments for false births and for reactivated deaths, and make revisions from that quarter onward. Because of issues with the source data for births of sole proprietors in Quarter 2 2022, we have not revised the births figures this time. Business deaths have been revised in line with our usual practice.

More detail about the IDBR and our annual official statistics on business demography is available in [our Business demography QMI \(Quality and methodology information\) article](#).
