

Statistical bulletin

Producer price inflation, UK: October 2023

Changes in the prices of goods bought and sold by UK manufacturers including price indices of materials and fuels purchased (input prices) and factory gate prices (output prices).

1 . Main points

- Producer input prices fell by 2.6% in the year to October 2023, down from a revised fall of 2.1% in the year to September 2023.
- Producer output (factory gate) prices fell by 0.6% in the year to October 2023, down from a revised increase of 0.2% in the year to September 2023.
- On a monthly basis, producer input prices rose by 0.4% and output prices rose by 0.1% in October 2023.
- Inputs of fuel, and outputs of food products provided the largest downward contributions to change in the annual rates of input and output inflation, respectively.
- While annual producer price inflation rates have generally been negative since June 2023, with prices in some sectors falling, the index levels for both input and output prices remain substantially higher than their 2021 levels, which is the last time producer price inflation was stable.

2 . Producer price inflation rates

The annual inflation rate of the input Producer Price Index (PPI) was negative for the fifth consecutive month (Figure 1).

The annual inflation rate of the output PPI was negative for the third time in the last four months following an upward revision to the September annual rate, from negative 0.1% to positive 0.2%.

The index levels for both input and output prices have remained high since mid-2022 (Figure 2). The small changes seen in the past few months, when compared with the broadly stable values over the past year, have created a fall in the annual inflation rate, even though the index levels remain high. We explain this in further detail in our [Beware base effects blog post](#).

Figure 1: Annual input and output PPI inflation rates were both negative in October 2023

Input and output Producer Price Index (PPI) annual inflation rates, UK, October 2013 to October 2023

Source: Producer Price Index (PPI) from the Office for National Statistics

3 . Input producer price inflation

The annual inflation rate of producer input prices decreased by 0.5 percentage points, from a revised negative inflation rate of 2.1% in the year to September 2023, to negative 2.6% to October 2023 (Table 1).

The monthly producer input inflation rate was 0.4% in October 2023, following an upwardly revised inflation rate of 0.6% in September 2023 (Table 1). The figures for both September and October 2023 are provisional, therefore they may be subject to small revisions as additional survey data are returned and validated.

Table 1: Input producer prices, index values, inflation rates and percentage point change to the annual inflation rate
UK, October 2022 to October 2023

		All materials and fuels purchased (GHIP)			
		PPI Index (2015=100)	Monthly inflation rate	Annual inflation rate	Change in the annual inflation rate (percentage points)

Notes

1. Rates may not correspond to index value changes because of rounding.

The largest downward contributions to the annual input inflation rate in October 2023 came from inputs of metals and inputs of chemicals, which contributed 1.31 and 1.30 percentage points, respectively (Figure 3). Metal and chemical prices fell by 3.7% and 8.0%, respectively in the year to October 2023 (Table 2).

There were also offsetting upward contributions from some product groups. Inputs of other parts and equipment, and inputs of fuel provided the largest upward contributions, at 1.15 and 0.63 percentage points, respectively.

As indicated in our [Classification review of the Energy Bills Discount Scheme statement](#), the data relating to the inputs of fuel now reflect the impact of the [Energy Bills Discount Scheme \(EBDS\)](#), which took effect from May 2023.

Figure 3: Metals and chemicals provided the largest downward contributions to the annual inflation rate of input PPI in October 2023

Input Producer Price Index (PPI), contribution to monthly and annual inflation rate, UK, October 2023

Figure 3: Metals and chemicals provided the largest downward contributions to the annual inflation rate of input PPI in October 2023

Input Producer Price Index (PPI), contribution to monthly and annual inflation rate, UK, October 2023

Manufactured products	0.6	-2.1	0.4	-2.6

Source: Producer Price Index (PPI) from the Office for National Statistics

Of the 10 product groups for input Producer Price Index (PPI), 5 showed downward contributions to the change in the annual inflation rate, with inputs of fuel providing the largest, at 0.26 percentage points (Figure 4).

Fuel prices fell by 1.6% between September and October 2023, with the annual inflation rate slowing from an increase of 21.4% in September to an increase of 15.8% in October. This was mainly driven by electricity prices.

Figure 4: Fuel provided the largest downward contribution to the change in the annual inflation rate of input PPI

Input Producer Price Index (PPI), contribution to change in the annual inflation rate, UK, October 2023

Figure 4: Fuel provided the largest downward contribution to the change in the annual inflation rate of input PPI

Input Producer Price Index (PPI), contribution to change in the annual inflation rate, UK, October 2023

Source: Producer Price Index (PPI) from the Office for National Statistics

Notes:

1. Contributions to the rate may not add up to the rate exactly because of rounding.

The prices of materials and fuels imported by UK manufacturing rose by 0.8% between September and October 2023, down from a revised increase of 2.1% between August and September. As a result, the annual inflation rate fell by 3.9% in October, down from a revised fall of 4.1% in September (Table 3).

Table 3: Imported materials and fuels purchased and sterling effective exchange rate, index values, inflation rates and percentage point change to the annual inflation rate
UK, October 2022 to October 2023

		PPI Index (2015=100)	Monthly inflation rate	Annual inflation rate	Change in the annual inflation rate (percentage points)	Sterling Index (Jan 2005=100)	Monthly rate	Annual rate

	Sep	143.6	2.1	-4.1	-2.0	81.4	-1.1	6.7
	Oct	144.8	0.8	-3.9	0.2	80.5	-1.1	4.6

Source: Producer Price Index (PPI) from the Office for National Statistics

Notes

1. Rates may not correspond to index value changes because of rounding.
2. Total imports (GD74) represents roughly one-fifth of overall materials and fuels (input prices) in terms of index weight.

4 . Output producer price inflation

The annual inflation rate of producer output (factory gate) prices decreased by 0.8 percentage points, from a revised increase of 0.2% in the year to September 2023 to a fall of 0.6% to October 2023. Along with July 2023, this is the lowest the annual inflation rate has been since November 2020.

The monthly producer output inflation rate was 0.1% in October 2023, following a revised inflation rate of 0.6% in September 2023 (Table 4).

Table 4: Output producer prices, index values, inflation rates and percentage point change to the annual inflation rate
UK, October 2022 to October 2023

All manufactured products (GB7S)

		PPI Index (2015=100)	Monthly inflation rate	Annual inflation rate	Change in the annual inflation rate (percentage points)
2022	Oct	137.5	0.9	17.2	-0.8

	Oct	136.6	0.1	-0.6	-0.8

Source: Producer Price Index (PPI) from the Office for National Statistics

Notes

1. Rates may not correspond to index value changes because of rounding.

The largest downward contribution to the annual output inflation rate in October 2023 came from refined petroleum products, which contributed 2.38 percentage points (Figure 5). This product group saw a price fall of 19.2% in the year to October (Table 5), down from a 17.2% fall in the year to September.

Despite providing the second-largest downward contribution to the annual rate, prices for basic metals, fabricated metal products and machinery increased by 2.1% in the year to October 2023. The downward contribution was caused by the 2023 weight for this product group being lower than its weight in 2022. We provide more information in our [Chain-linking in business prices article](#) and in Section 5 of our [Producer price inflation, UK: February 2023 bulletin](#).

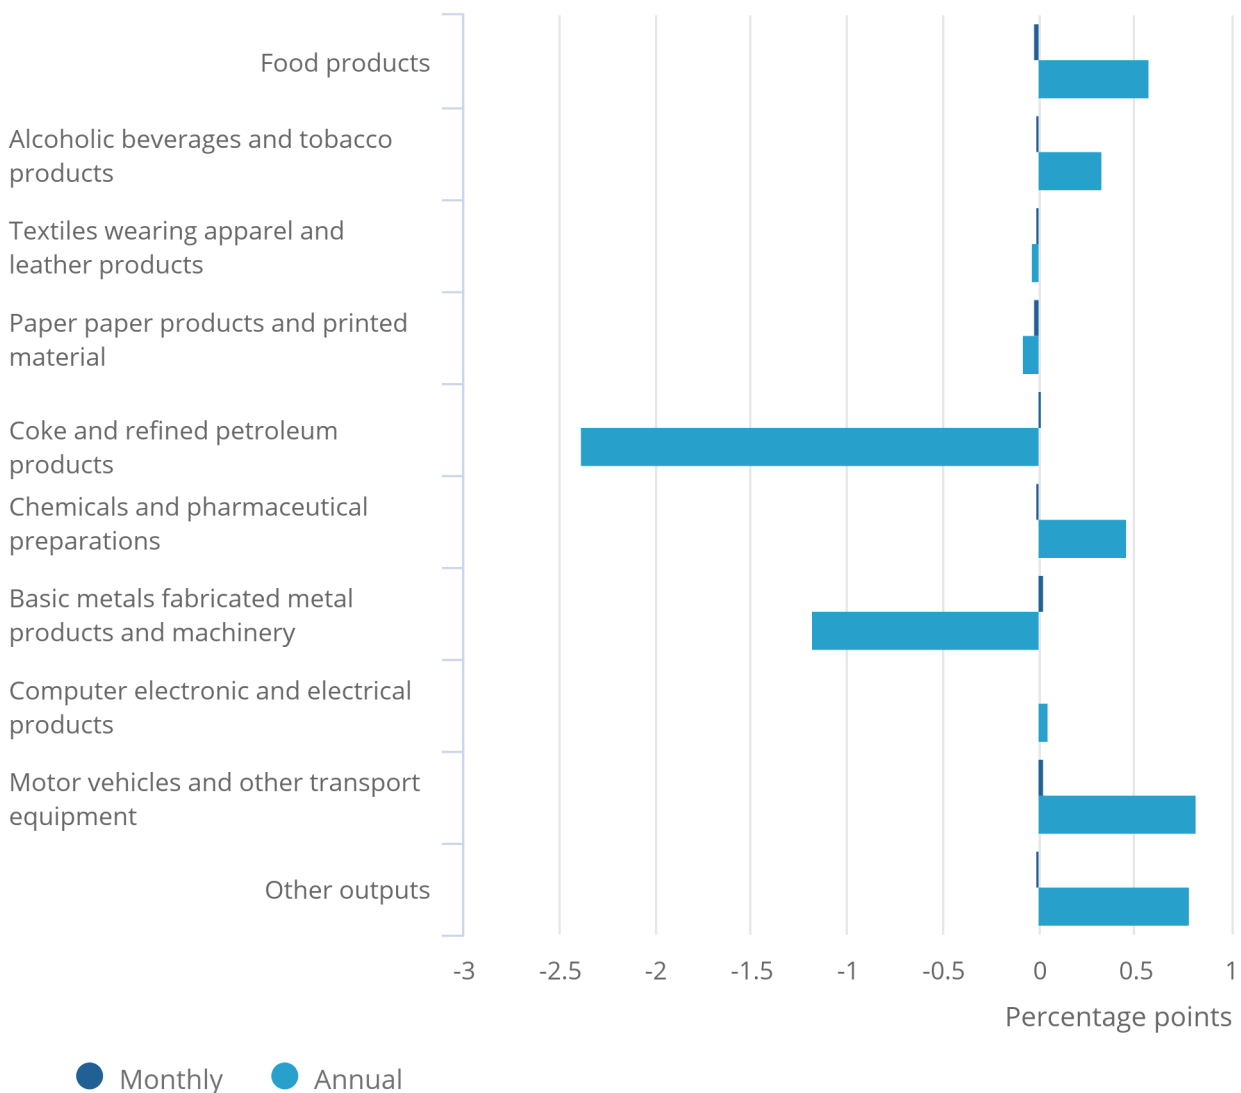

The largest offsetting upward contributions to the annual output inflation rate in October 2023 came from motor vehicles and other transport equipment, and other outputs, which contributed 0.82 and 0.79 percentage points, respectively.

Of the 10 product groups, 7 showed downward contributions to the change in the annual inflation rate, with food products providing the largest at 0.25 percentage points (Figure 6). Food products increased 3.0% on the year to October 2023, down from an increase of 4.2% in the year to September 2023.

5 . Producer price inflation data

[Producer price inflation time series](#)

Dataset | Released 15 November 2023

A comprehensive selection of data on input and output indices. Contains producer price indices of materials and fuels purchased and output of manufacturing industry by broad sector.

[Output and input producer price inflation: contributions to the annual rates](#)

Dataset | Released 15 November 2023

Contributions to the annual inflation rates of input and output producer price inflation by component and overall inflation rates.

[Producer price inflation](#)

Dataset MM22 | Released 15 November 2023

UK price movement data at all manufacturing, aggregated industry and product group levels. Data supplied from individual manufacturers, importers and exporters. Monthly, quarterly and annual data.

6 . Glossary

Weight

This is the importance of the price of interest relative to other prices collected. With annual chain-linking, this is updated every year using business turnover data.

Index value

Price level in a specific basket of goods.

Annual growth rate

The annual inflation rate.

Link factor

A smoothing factor applied to create a continuous series following a weights change.

Contribution

A measure of influence that the index has on the overall growth rate. This depends on both the magnitude of the weight and the inflation rate. A positive contribution is an index that is driving a change in the annual growth rate value. Where the contribution is positive but the growth is negative, this indicates that the index is reducing the annual growth rate (for example, the growth rate would be higher if this index had a lower weight).

Producer price inflation

Changes in the prices of goods bought and sold by UK manufacturers, including price indices of materials and fuels purchased (input prices) and factory gate prices (output prices).

If the producer price inflation rate is a positive value, this indicates that prices have risen, while a negative value indicates that prices have fallen.

Input prices

The input price measures the price of materials and fuels bought by UK manufacturers for processing. It includes materials and fuels that are both imported or sourced within the domestic market. It is not limited to materials used in the final product but includes what is required by businesses in their normal day-to-day running, such as fuels.

Output prices

The factory gate price (output price) is the amount received by UK producers for the goods that they sell to the domestic market. It includes the margin that businesses make on goods, in addition to costs such as labour, raw materials and energy, as well as interest on loans, site or building maintenance, or rent.

Services producer price inflation

Quarterly estimates monitoring the changes in prices charged for services provided to UK-based customers for a range of industries.

7 . Measuring the data

Producer prices development plan

The Office for Statistics Regulation (OSR) quality report of the Producer Price Indices (PPI) was published in July 2023. The report notes the excellent progress made recently in bringing PPI in line with methodological best practice, but also highlights areas that need to be improved.

Read the [full OSR report](#).

The [Producer prices development plan](#) was published in October 2023 detailing the work that will be undertaken over the next year to improve the quality of PPI data and continue to meet user needs.

The Producer Price Index

The Producer Price Index (PPI) uses contributions to identify how indices influence the overall inflation rate. This section gives additional information on the calculation and how to interpret it.

Example scenarios

The following gives examples of how weight and inflation rate changes most commonly affect the contribution. In PPI, the weights usually have greater influence on the contribution, as these tend to show greater change than the annual inflation rate:

- decrease in weight and in inflation rate – contribution is negative
- decrease in weight, increase in inflation rate – contribution is usually negative
- no change in weight or inflation rate – no change
- no change in weight, increase in inflation rate – contribution is usually positive
- increase in weight, decrease in inflation rate – contribution is usually positive
- increase in weight, no change in inflation rate – contribution is positive
- increase in weight, increase in inflation rate – contribution is positive

Contributions are calculated using the following formula:

$$\frac{(\text{weight} \times \text{index value} \times \text{link factor}) \text{ for current year} - (\text{weight} \times \text{index value} \times \text{link factor}) \text{ for previous year}}{\text{chain linked value for the overall index}}$$

Quality and methodology information (QMI) on strengths, limitations, appropriate uses, and how the data were created is available in our [Producer price indices QMI](#) and our [Services Producer Price Inflation QMI](#).

Other useful documentation from the Office for National Statistics for the PPI and the Services Producer Price Index (SPPI) are:

- [Producer Price Indices methods changes article](#)
- [Chain-linking in business prices article](#)
- [Producer price weight changes article](#)
- [Services producer price weight changes article](#)
- [Guidance on using indices in Indexation Clauses \(PDF, 197KB\)](#)
- [PPI methods and guidance \(PDF, 1.14MB\)](#)
- [SPPI user guidance and methodology article](#)
- [PPI standard errors: 2017 datasets](#)
- [UK SPPI standard errors: 2016 to 2017 article](#)

Sterling effective exchange rate

The sterling effective exchange rate measures changes in the strength of sterling relative to baskets of other currencies. The sterling effective exchange rate is only indicative of the rates applied to producer prices. This is because the sterling effective exchange rate is a trade-weighted index that represents all UK trade, whereas producer prices reflect transactions in the manufacturing sector.

Data revisions policy

Figures for the latest two months are provisional, and the latest 12 months are subject to revisions because of late and revised respondent data. The PPI revision policy is now in line with that of the national accounts. Published information on the [revisions policy](#) and revisions triangles shows how estimates are revised over time.

8 . Strengths and limitations

Strengths

These data:

- provide users with valuable insight into the changes in the prices of goods and services bought and sold by UK manufacturers
- are comprehensive, covering many products at a much greater level of detail than other surveys
- are internationally comparable with any country using the classification by product activity (CPA) or the central product classification (CPC) systems
- are created using a rotational sampling method to enable many new products and new respondents to be included
- are chain-linked annually to improve results in deflation by reducing substitution bias

Limitations

The limitations are that:

- some products are produced by only a small number of manufacturers, meaning that there may not be enough manufacturers for a detailed and robust analysis, and the sector may be volatile, requiring some estimation
- the data can be revised for 12 months
- the data for the latest two months of the Producer Price Index (PPI) and two quarters of the Services Producer Price Index (SPPI) are provisional

Response rates in October 2023

The response rates for the domestic PPI, Import Price Index (IPI) and Export Price Index (EPI) all increased between September and October 2023 (Table 6).

Table 6: Producer Price Index (PPI), Import Price Index (IPI) and Export Price Index (EPI) overall effective response rates at time of first publishing
Percentage, UK, October 2022 to October 2023

	Weighted response		
	PPI (domestic)	IPI	EPI
October 2022	73.3	61.3	71.6
November 2022	78.0	73.3	71.7
December 2022	78.2	72.9	73.7
January 2023	77.9	71.7	73.9
