

Statistical bulletin

Producer price inflation, UK: April 2024

Changes in the prices of goods bought and sold by UK manufacturers including price indices of materials and fuels purchased (input prices) and factory gate prices (output prices).

1 . Main points

- Producer input prices fell by 1.6% in the year to April 2024, up from a fall of 2.5% in the year to March 2024.
- Producer output (factory gate) prices rose by 1.1% in the year to April 2024, up from a revised increase of 0.7% in the year to March 2024.
- On a monthly basis, producer input prices rose by 0.6% and output prices rose by 0.2% in April 2024.
- Based on the provisional data, the annual inflation rates for both input and output PPI are at their highest levels since May 2023.

2 . Producer price inflation rates

The annual inflation rate of the input Producer Price Index (PPI) was negative 1.6% in the year to April 2024, up from a rate of negative 2.5% in the year to March 2024 (Figure 1). This is the 11th consecutive month the annual rate has been negative but the highest it has been since May 2023. The monthly input PPI inflation rate was 0.6% in April 2024, following a revised 0.2% fall in March 2024 (Table 1).

The annual inflation rate of the output (factory gate) PPI was 1.1% in the year to April 2024, up from a revised rate of 0.7% in the year to March 2024. This is the highest the rate has been since May 2023 (Figure 1). The monthly inflation rate remained unchanged at 0.2% in April 2024 (Table 1).

Estimates for both March and April 2024 are provisional, and figures for the latest 12 months are subject to revisions as additional survey data are returned and validated. Effective response rates at time of first publishing can be found in [Section 8: Strengths and limitations](#).

3 . Input producer price inflation

Producer input prices fell by 1.6% in the year to April 2024, up from a fall of 2.5% in the year to March 2024. Of the 10 product groups for the input Producer Price Index (PPI), 4 made downward contributions to the annual inflation rate in April 2024. The largest of these came from inputs of chemicals, and inputs of fuel (energy), which contributed negative 0.95 and 0.68 percentage points, respectively (Figure 3). Fuel covers electricity and gas (D35) and coal (B05) of the [classification of products by activity \(CPA 2.1\)](#).

Chemical prices fell by 6.0% in the year to April 2024 (Table 2), with falls in the prices of “other organic basic chemicals”, which survey respondents noted were the result of market dynamics (supply and demand) and falling gas prices.

Fuel prices fell by 13.4% in the year to April 2024 (Table 2). This is the lowest the rate has been since April 2010 despite price levels remaining substantially higher than their early 2021 levels. The main contribution to this fall came from electricity prices.

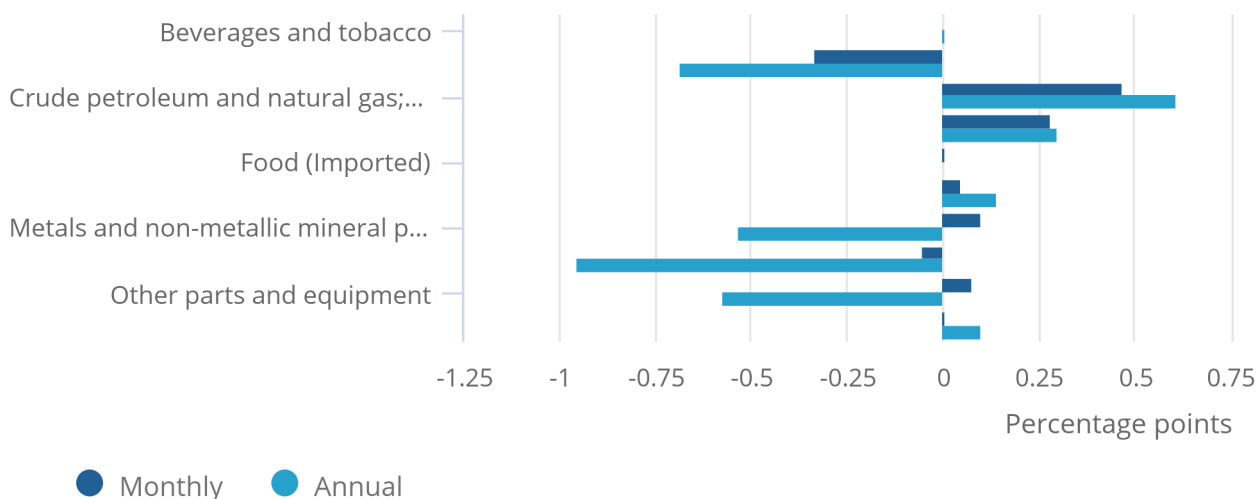

In comparison, the largest offsetting upward contributions came from inputs of crude petroleum and inputs of domestic food, at 0.61 and 0.30 percentage points, respectively. The annual inflation rate for crude petroleum increased from negative 0.2% in March 2024 to 10.4% in April 2024, while the annual rate for domestic food increased from negative 2.2% to 1.1% between the same periods, partly because of rising fish prices.

Figure 3: Chemicals provided the largest downward contribution to the annual inflation rate of input PPI

Notes:

- Contributions to the rate may not add up to the rate exactly because of rounding.
- Fuel covers electricity and gas (D35) and coal (B05) of the [classification of products by activity \(CPA 2.1\)](#)

Table 2: Input producer prices, inflation rates
UK, March and April 2024

| Product group | March 2024 | | April 2024 | |
|--|------------------------|-----------------------|------------------------|-----------------------|
| | Monthly inflation rate | Annual inflation rate | Monthly inflation rate | Annual inflation rate |
| Beverages and tobacco | 0.2 | -0.5 | 0.9 | 0.4 |
| Fuel | -5.7 | 1.5 | -6.5 | -13.4 |
| Crude petroleum and natural gas; Metal ores | 0.3 | -0.2 | 7.9 | 10.4 |
| Food (Domestic) | 0.1 | -2.2 | 2.1 | 1.1 |
| Food (Imported) | -0.8 | -1.7 | 0.3 | -1.7 |
| Other produced material | 0.0 | -2.2 | 0.5 | -0.1 |
| Metals and non-metallic mineral products | -0.1 | -4.3 | 0.5 | -3.7 |
| Chemicals | 0.7 | -6.8 | -0.3 | -6.0 |
| Other parts and equipment | 0.2 | 0.4 | 0.4 | 1.1 |
| Other inputs | 0.1 | 2.8 | 0.2 | 2.8 |
| Manufactured products | -0.2 | -2.5 | 0.6 | -1.6 |

Source: Producer Price Index (PPI) from the Office for National Statistics

Of the 10 product groups for input PPI, 6 made upward contributions to the change in the annual inflation rate in April 2024, with inputs of crude petroleum providing the largest, at 0.61 percentage points (Figure 4).

Figure 4: Inputs of crude petroleum provided the largest upward contribution to the change in the annual inflation rate of input PPI

Source: Producer Price Index (PPI) from the Office for National Statistics

Notes:

1. Contributions to the rate may not add up to the rate exactly because of rounding.

The prices of materials and fuels imported by UK manufacturing fell by 1.3% in the year to April 2024, which is up from a revised fall of 3.0% in March 2024. The monthly prices rose by 0.9% between March and April 2024, compared with no movement between February and March 2024, which was revised up from a fall of 0.1%. The fall in import prices in the year to April 2024 is consistent with the stronger sterling value, which rose by 3.9% in the same year (Table 3).

Table 3: Imported materials and fuels purchased and sterling effective exchange rate, index values, inflation rates and percentage point changes to the annual inflation rate
UK, April 2023 to April 2024

| | Imported materials and fuels purchased (GD74) | | | | Sterling effective exchange rate - month average (BK67) | | |
|-----------------|--|-------------------------------|------------------------------|--|--|---------------------|--------------------|
| | Import PPI (2015=100) | Monthly inflation rate | Annual inflation rate | Change in the annual inflation rate (percentage points) | Sterling Index (Jan 2005=100) | Monthly rate | Annual rate |
| 2023 Apr | 143.7 | -1.0 | 5.2 | -3.3 | 79.3 | 1.3 | -2.4 |
| May | 141.7 | -1.4 | 1.1 | -4.1 | 80.1 | 1.0 | 0.3 |

| Mar | 140.7 | 0.0 | -3.0 | 0.7 | 82.8 | 0.5 | 5.8 |
| Apr | 141.9 | 0.9 | -1.3 | 1.7 | 82.4 | -0.5 | 3.9 |

Source: Producer Price Index (PPI) from the Office for National Statistics and the sterling effective exchange rate from the Bank of England

Notes

1. Rates may not correspond to index value changes because of rounding.
2. Total imports (GD74) represent roughly one-quarter of overall materials and fuels (input prices) in terms of index weight.

4 . Output producer price inflation

Producer output (factory gate) prices rose by 1.1% in the year to April 2024, up from a rise of 0.7% in the year to March 2024. Of the 10 product groups for the output Producer Price Index (PPI), 6 made upward contributions to the annual inflation rate in April 2024. The largest of these came from refined petroleum products and “other outputs”, which contributed 2.46 and 1.02 percentage points, respectively (Figure 5).

Petroleum prices rose by 13.3% in the year to April 2024 (Table 4), the highest the rate has been since January 2023. Prices for “other outputs” rose by 1.9% in the year to April 2024.

In comparison, offsetting downward contributions came from chemicals and paper products, at negative 1.78 and 1.16 percentage points, respectively. Chemical prices fell by 8.8% in the year to April 2024 (Table 4), with the largest price falls coming from fertilisers.

Notes:

1. Contributions to the rate may not add up to the rate exactly because of rounding.

5 . Producer price inflation data

[Producer price inflation time series](#)

Dataset | Released 22 May 2024

A comprehensive selection of data on input and output indices. Contains producer price indices of materials and fuels purchased and output of manufacturing industry by broad sector.

[Output and input producer price inflation: contributions to the annual rates](#)

Dataset | Released 22 May 2024

Contributions to the annual inflation rates of input and output producer price inflation by component and overall inflation rates.

[Producer price inflation](#)

Dataset MM22 | Released 22 May 2024

UK price movement data at all manufacturing, aggregated industry and product group levels. Data supplied from individual manufacturers, importers and exporters. Monthly, quarterly and annual data.

6 . Glossary

Weight

This is the importance of the price of interest relative to other prices collected. With annual chain-linking, this is updated every year using business turnover data.

Index value

Price level in a specific basket of goods.

Annual growth rate

The annual inflation rate.

Link factor

A smoothing factor applied to create a continuous series following a weights change.

Contribution

A measure of influence that the index has on the overall growth rate. This depends on both the magnitude of the weight and the inflation rate. A positive contribution is an index that is attributed to an increase in the annual growth rate value. Where the contribution is positive, but the growth is negative, this indicates that the index is reducing the annual growth rate (for example, the growth rate would be higher if this index had a lower weight).

Producer price inflation

Changes in the prices of goods bought and sold by UK manufacturers, including price indices of materials and fuels purchased (input prices) and factory gate prices (output prices).

If the producer price inflation rate is a positive value, this indicates that prices have risen, while a negative value indicates that prices have fallen.

Input prices

The input price measures the price of materials and fuels bought by UK manufacturers for processing. It includes materials and fuels that are either imported or sourced from within the domestic market. It is not limited to materials used in the final product but includes what is required by businesses in their normal day-to-day running, such as fuels.

Output prices

The output price (also known as the factory gate price) is the amount received by UK producers for the goods that they sell to the domestic market. It includes the margin that businesses make on goods, in addition to costs such as labour, raw materials and energy, as well as interest on loans, site or building maintenance, or rent.

Services producer price inflation

Quarterly estimates monitoring the changes in prices charged for services provided to UK-based customers for a range of industries.

7 . Measuring the data

Producer prices development plan

The Office for Statistics Regulation (OSR) quality report of the Producer Price Indices (PPI) was published in July 2023. The report notes the excellent progress made recently in bringing PPI in line with methodological best practice, but also highlights areas that need to be improved.

For further details, see the [full OSR report](#).

Our [Producer prices development plan](#) was published in October 2023, detailing the work that will be undertaken over the next year to improve the quality of PPI data and continue to meet user needs.

The Producer Price Index

The Producer Price Index (PPI) uses contributions to identify how indices influence the overall inflation rate. This section gives additional information on the calculation and how to interpret it.

Example scenarios

The following gives examples of how weight and inflation rate changes most commonly affect the contribution. In PPI, the weights usually have greater influence on the contribution, as these tend to show greater change than the annual inflation rate:

- decrease in weight, decrease in inflation rate – contribution is negative
- decrease in weight, no change in inflation rate – contribution is negative
- decrease in weight, increase in inflation rate – contribution is usually negative
- no change in weight, decrease in inflation rate – contribution is usually negative
- no change in weight or inflation rate – no change
- no change in weight, increase in inflation rate – contribution is usually positive
- increase in weight, decrease in inflation rate – contribution is usually positive
- increase in weight, no change in inflation rate – contribution is positive
- increase in weight, increase in inflation rate – contribution is positive

Contributions are calculated using the following formula:

$$\frac{(\text{weight} \times \text{index value} \times \text{link factor}) \text{ for current year} - (\text{weight} \times \text{index value} \times \text{link factor}) \text{ for previous year}}{\text{chain linked value for the overall index}}$$

Quality and methodology information (QMI) on strengths, limitations, appropriate uses, and how the data were created is available in our [Producer price indices QMI](#) and our [Services Producer Price Inflation QMI](#).

Other useful documentation from the Office for National Statistics for the PPI and the Services Producer Price Index (SPPI) are:

- [Producer Price Indices methods changes article](#)
- [Chain-linking in business prices article](#)
- [Producer price weight changes article](#)
- [Services producer price weight changes article](#)
- [Guidance on using indices in Indexation Clauses \(PDF, 197KB\)](#)
- [PPI methods and guidance \(PDF, 1.175KB\)](#)
- [SPPI user guidance and methodology](#)
- [PPI standard errors: 2017 datasets](#)
- [UK SPPI standard errors: 2016 to 2017 article](#)

Sterling effective exchange rate

The sterling effective exchange rate measures the level of sterling relative to a basket of other currencies. The weights in the basket reflect all UK trade, and may therefore be different from those for manufactured goods, which are most relevant for producer prices.

Data revisions policy

Figures for the latest two months are provisional, and the latest 12 months are subject to revisions because of late and revised respondent data. The PPI revision policy is now in line with that of the national accounts. Published information on our [revisions policy](#) and revisions triangles shows how estimates are revised over time.

8 . Strengths and limitations

Strengths

These data:

- provide users with valuable insight into the changes in the prices of goods and services bought and sold by UK manufacturers
- are comprehensive, covering many products at a much greater level of detail than other surveys
- are internationally comparable with any country using the classification by product activity (CPA) or the central product classification (CPC) systems
- are created using a rotational sampling method to enable many new products and new respondents to be included
- are chain-linked annually to improve results in deflation by reducing substitution bias

Limitations

The limitations are that:

- some products are produced by only a small number of manufacturers, meaning that there may not be enough manufacturers for a detailed and robust analysis, and the sector may be volatile, requiring some estimation
- the data can be revised for 12 months
- the data for the latest two months of the Producer Price Index (PPI) and two quarters of the Services Producer Price Index (SPPI) are provisional

Response rates in April 2024

The response rate for the domestic PPI increased between March and April 2024, whereas the response rates for the Import Price Index (IPI) and the Export Price Index (EPI) decreased (Table 5). Response rates for all three surveys are higher than they were in April 2023.

Table 5: Producer Price Index (PPI), Import Price Index (IPI) and Export Price Index (EPI) overall effective response rates at time of first publishing
UK, April 2023 to April 2024

| | Weighted response | | |
|-----------------------|-------------------|------|------|
| | PPI (domestic) | IPI | EPI |
| April 2023 | 78.9 | 79.3 | 74.6 |
| May 2023 | 78.3 | 82.2 | 75.8 |
| June 2023 | 76.1 | 80.4 | 77.7 |
| July 2023 | 74.8 | 82.4 | 72.2 |
| August 2023 | 79.0 | 83.9 | 77.3 |
| September 2023 | 80.3 | 80.8 | 73.4 |
| October 2023 | 81.0 | 81.3 | 75.0 |
| November 2023 | 84.7 | 84.6 | 78.9 |
| December 2023 | 82.0 | 85.0 | 77.6 |
| January 2024 | 76.4 | 78.6 | 68.3 |
| February 2024 | 83.1 | 82.8 | 80.3 |
| March 2024 | 81.9 | 81.7 | 79.0 |
| April 2024 | 85.0 | 80.0 | 77.5 |
