## 2. Main points

#### Latest data

Estimates for payrolled employees in the UK decreased by 9,000 (0.0%) between August and September 2024, but rose by 136,000 (0.4%) between September 2023 and September 2024.

Payrolled employees fell by 9,000 (0.0%) over the quarter but rose by 182,000 (0.6%) over the year, when looking at July to September 2024, which is the period comparable with our Labour Force Survey (LFS) estimates.

The early estimate of payrolled employees for October 2024 decreased by 5,000 (0.0%) on the month but increased by 95,000 (0.3%) on the year, to 30.4 million. The October 2024 estimate should be treated as a provisional estimate and is likely to be revised when more data are received next month.

Increased volatility of LFS estimates, resulting from smaller achieved sample sizes, means that estimates of change should be treated with additional caution. We recommend using them as part of our suite of labour market indicators, alongside Workforce Jobs (WFJ), Claimant Count data, and Pay As You Earn (PAYE) Real Time Information (RTI) estimates.

The UK employment rate for people aged 16 to 64 years was estimated at 74.8% in July to September 2024. This is largely unchanged on a year ago, but up in the latest quarter.

The UK unemployment rate for people aged 16 years and over was estimated at 4.3% in July to September 2024. This is above estimates of a year ago, and up in the latest quarter.

The UK economic inactivity rate for people aged 16 to 64 years was estimated at 21.8% in July to September 2024. This is below estimates of a year ago, and down in the latest quarter.

The UK Claimant Count for October 2024 increased both on the month and on the year, to 1.806 million.

The estimated number of vacancies in the UK decreased in August to October 2024, by 35,000 on the quarter to 831,000. Vacancies decreased on the quarter for the 28th consecutive period but are still above pre-coronavirus (COVID-19) pandemic levels.

Annual growth in employees' average regular earnings excluding bonuses in Great Britain was 4.8% in July to September 2024, and annual growth in total earnings including bonuses was 4.3%. This total annual growth is affected by the civil service one-off payments made in July and August 2023.

Annual growth in real terms, adjusted for inflation using the Consumer Prices Index including owner occupiers' housing costs (CPIH) for regular pay was 1.9% in July to September 2024, and for total pay was 1.4%.

There were an estimated 48,000 working days lost because of labour disputes across the UK in September 2024.

## 3. Trends and considerations around comparisons

In this section, we supply additional commentary to help users assess the different sources of data we publish on employment and related indicators.

Figure 1 shows the annual growth rates in a selection of our different employment indicators, with annual growth rates giving a more stable, longer-term view on changes. The Labour Force Survey (LFS) is our survey of households, while Workforce Jobs (WFJ) is based predominantly on business surveys for employee jobs, with the LFS covering self-employed jobs. HM Revenue and Customs' Pay As You Earn (PAYE) Real Time Indicators (RTI) data are derived from administrative tax records and covers only payrolled employees.

Each of these sources are collected and processed in different ways so we do expect differences in levels, for example, jobs versus people, while divergent trends between individual periods are also possible. Further detail on how best to compare these different sources can be found in Coherence of data sources in <u>Section 7: Data sources and quality</u> and in our <u>Comparison of labour market sources article</u>.

### Figure 1: Annual growth rates for employee jobs and payrolled employees are broadly coherent

Annual growth rates, employment indicators, seasonally adjusted, UK, July to September 2022, to July to September 2024

# Figure 1: Annual growth rates for employee jobs and payrolled employees are broadly coherent

Annual growth rates, employment indicators, seasonally adjusted, UK, July to September 2022, to July to September 2024

Source: Labour Force Survey and Workforce Jobs from the Office for National Statistics, and Pay As You Earn Real Time Information (RTI) from HM Revenue and Customs

### Notes:

- 1. Three-month averages of RTI payrolled employees have been used here for comparability.
- 2. Labour Force Survey (LFS) employee annual growth rates have not been calculated for periods following the July to September 2022 discontinuity.
- 3. Workforce jobs are published for the months of March, June, September and December. For presentational purposes, they have been plotted against the middle month of the time period shown, that is, March has been plotted against February to April.

There have been ongoing challenges in assessing the coherence between these statistics as we have described in recent months. For the datasets available in the latest period, annual growth ranges from 0.6% for payrolled employees up to 0.8% for LFS employees. Though this is relatively coherent for this specific point in time, observing over a longer time period shows differing trends in annual growth rates. Annual growth in the latest measures from RTI and WFJ have continued to slow, while LFS is showing a different picture.

As outlined in previous Labour market overviews, the longer-term broad coherence between RTI and WFJ, when looking at annual change, suggests that these sources are likely to be providing a more reliable estimate of employment, particularly for employees. These sources continue to indicate that we have seen a sustained moderation of growth in employment over the last year. RTI and WFJ also show less volatility than the LFS over the same time period.

Despite these coherence challenges, the LFS continues to be the sole source of data for unemployment, economic inactivity and the self-employed. There are also a range of breakdowns that are only possible from LFS data.

As external sources are suggesting that recent increases in LFS measures of employment are likely to be overstating underlying employment growth, we expect that underlying changes in the other labour market statuses will also be affected. For example, the more modest growth we see in alternative employment sources may indicate that unemployment and economic inactivity may have moved less than the LFS has recently suggested.

It is also likely that some of the recent movements in LFS estimates are being affected by the increased sample size and change in data collection methods introduced over the last year, in addition to any underlying changes in the labour market.

The wave structure of the LFS means that any changes in sampling can take a substantial period of time to fully feed through the survey. We interview sampled households at quarterly intervals for five consecutive quarters. Any given three-month dataset includes respondents completing their first, second, third, fourth or fifth interview (often called "waves").

Between July and December 2023, the Wave 1 sample for the LFS was reduced to its pre-coronavirus level, before the boost was reinstated from January 2024. This reduction in the sample stays in our LFS datasets for five quarters, as these smaller cohorts progress through subsequent waves, all the way to Wave 5. From July 2024, the smaller cohorts are steadily being replaced by boosted cohorts. However, it will not be until the January to March 2025 period (published in May 2025) when LFS data only include boosted cohorts.

We are continuing to improve the quality of the LFS, building on our work to date. This has led to an increase in achieved interviews, from 44,238 in July to September 2023 to 59,139 in July to September 2024, as shown in our LFS performance and quality monitoring report: July to September 2024. Work is also under way to carry out a further reweighting of our LFS estimates, detailed in our Labour market transformation article. An Impact of reweighting on Labour Force Survey key indicators article will be published on 3 December 2024, and the reweighted estimates will be incorporated into our next Labour market release on 17 December 2024, which we anticipate will improve coherence between LFS and other sources. With this work ongoing, we advise caution particularly when interpreting short-term change in the LFS and encourage users to make use of a wide range of data sources where possible.

This bulletin includes data from business and social surveys, as well as data from administrative sources. It includes a combination of accredited official statistics and official statistics in development and therefore, we advise the consideration of this when using. Read more in <u>Section 7: Data sources and quality</u>.

## 4. Latest indicators at a glance

### 5. Data on labour market

<u>Summary of labour market statistics</u> Dataset A01 | Released 12 November 2024 Labour market statistics summary data table, including earnings, employment, unemployment, redundancies and vacancies, Great Britain and UK, published monthly.

Earnings and employment from Pay As You Earn Real Time Information, seasonally adjusted Dataset | Released 12 November 2024 Earnings and employment statistics from Pay As You Earn (PAYE) Real Time Information (RTI), seasonally adjusted. These are official statistics in development.

A guide to labour market data Methodology | Updated 21 April 2023 Summary of labour market datasets, providing estimates of employment, unemployment, average weekly earnings, and the number of vacancies. Tables are listed alphabetically and by topic.

View all related data on our related data page.

Alternatively, Nomis provides free access to the most detailed and up-to-date UK labour market statistics.

## 6. Glossary

### Average weekly earnings

Average weekly earnings measure money paid by employers to employees in Great Britain before tax and other deductions from pay. The estimates are not just a measure of pay rises, because they also reflect, for example, changes in the overall structure of the workforce.

More high-paid jobs in the economy would have an upward effect on the earnings growth rate.

### **Economic inactivity**

People not in the labour force are not in employment but do not meet the internationally accepted definition of unemployment. This is because they have not been seeking work within the last four weeks or they are unable to start work in the next two weeks. The economic inactivity rate is the proportion of people aged between 16 and

64 years who are not in the labour force. The Labour Force Survey estimates are official statistics in development.

### **Employment**

Employment measures the number of people in paid work or who had a job that they were temporarily away from (for example, because they were on holiday or off sick). This differs from the number of jobs because some people have more than one job. The employment rate is the proportion of people aged between 16 and 64 years who are in employment. The Labour Force Survey estimates are official statistics in development.

### Unemployment

Unemployment measures people without a job who have been actively seeking work within the last four weeks and are available to start work within the next two weeks. The unemployment rate is not the proportion of the total population who are unemployed. It is the proportion of the economically active population (people in work and those seeking and available to work) who are unemployed. The Labour Force Survey estimates are official statistics in development.

### **Claimant Count**

The Claimant Count is an <u>official statistic in development</u> that measures the number of people who are receiving a benefit principally for the reason of being unemployed. Currently, the Claimant Count consists of those receiving Jobseeker's Allowance and Universal Credit claimants in the "searching for work" conditionality group.

### **Vacancies**

Vacancies are defined as positions for which employers are actively seeking recruits from outside their business or organisation. The estimates are based on the Vacancy Survey. This is a survey of businesses designed to provide estimates of the stock of vacancies across the economy, excluding agriculture, forestry and fishing (a small sector for which the collection of estimates would not be practical).

### Pay As You Earn Real Time Information

These data come from HM Revenue and Customs' (HMRC's) Pay As You Earn (PAYE) Real Time Information (RTI) system. They cover the whole population, rather than a sample of people or companies, and they will allow for more detailed estimates of the population. The PAYE RTI statistics are official statistics in development (previously called experimental statistics) because the methodologies used to produce the statistics are still in their development phase.

In June 2023, the Office for Statistics Regulation (OSR) published an assessment report of HMRC and Office for National Statistics (ONS) statistics on earnings and employment from PAYE RTI. HMRC and the ONS welcome OSR's assessment report and have developed an <u>action plan focusing on the six requirements</u>.

A more detailed glossary is available in our **Guide to labour market statistics methodology**.

## 7. Data sources and quality

The estimates presented in this bulletin contain uncertainty. For more information, see our <u>Uncertainty and how we measure it methodology</u>.

Information on revisions is available in our Labour market statistics revisions policy.

Information on the strengths and limitations of this bulletin is available in our <u>Labour market overview</u>, <u>UK: April</u> 2021 bulletin.

Further information is available in our <u>Guide to labour market statistics methodology</u>.

### Accredited official statistics

On 7 June 2024, the Office for Statistics Regulation (OSR) introduced the new accredited official statistics badge, to denote official statistics that have been independently reviewed by the OSR. Accredited official statistics comply with the standards of trustworthiness, quality and value in the <u>Code of Practice for Statistics</u>.

This UK labour market bulletin includes a combination of <u>accredited official statistics</u> and <u>official statistics in development</u> (until September 2023, these were called "experimental statistics"). Read more about the change in our <u>Guide to official statistics in development</u>.

The following labour market outputs are accredited official statistics:

- Labour disputes (rapid review completed by the OSR in February 2023)
- Vacancy statistics (reviewed by the OSR in April 2022)
- Workforce Jobs (WFJ) (reviewed by the OSR in April 2022)

The following labour market outputs are official statistics in development:

- Labour Force Survey (LFS) estimates
- ONS Claimant Count

## **Labour Force Survey**

We have been facing the challenge of falling response rates for household surveys, as have other comparable countries. This issue became more acute in the LFS data collected for August 2023. The LFS estimates due to be published in October 2023 were suspended because of quality concerns. We developed a comprehensive plan to address these concerns and reintroduce LFS, as described in our <u>Labour Force Survey: planned improvements and its reintroduction estimates methodology</u>.

As stated on 5 February 2024 in our <u>Impact of reweighting on Labour Force Survey key indicators: 2024 article,</u> from 13 February 2024 we have reinstated reweighted LFS estimates into our monthly publication. These LFS estimates are official statistics in development.

Reweighting does not address the volatility we have seen in recent periods and which we expect to see to some extent in the future, so we would advise caution when interpreting changes in headline rates and recommend using them as part of our suite of labour market indicators, alongside WFJ, Claimant Count data and PAYE RTI estimates.

As stated in our article published 18 July 2024, we are <u>planning a further reweighting exercise</u>, based on the population projections published in January 2024. We plan to introduce the reweighted LFS series into our labour market publication in December 2024.

Further information on response rates and other quality-related issues for the LFS can be found in our quarterly <u>Labour Force Survey performance and quality monitoring reports</u>.

### Coherence of data sources

Understanding coherence challenges around the LFS continues to be a priority. As we have previously communicated, we are undertaking a further reweighting of LFS-based statistics, which is due to be published as part of our December 2024 publication of labour market statistics. Our expectation is that this will improve the coherence picture as strong population growth in recent years is incorporated into our estimates of all three labour market statuses. Though, the extent to which any gap for employment will be reduced is not yet clear.

Additionally, we are looking to refresh our work on reconciling estimates of employment from the LFS and WFJ. This work makes several adjustments to both LFS and WFJ estimates to try and account for known differences in concepts, coverage and measurement.

Before the coronavirus (COVID-19) pandemic, these adjustments could explain around 40% to 50% of the gap in jobs measured by the two sources. However, when last published in 2022, this percentage had decreased to below 30%.

These adjustments are based on a range of assumptions and data sources, some of which are now relatively dated. Therefore, we are starting work to refresh these data sources and assumptions where possible. This will help us to understand the extent to which recent divergence in trends can be explained by known differences between the sources.

We are also considering how to best consider coherence between HMRC's PAYE RTI data and WFJ. As the former is essentially focused on employees, we recommend comparison with the employee jobs component of WFJ to align coverage of populations. One other important difference is that the RTI statistics published each month are a measure of people, rather than jobs, as in WFJ. One option is to look at data published annually by HMRC on "employments", which are conceptually closer to jobs. Though only available up to the end of 2023, making this comparison between WFJ employee jobs and RTI employments suggests good coherence between these two sources in recent years.

Our <u>Comparison of labour market data sources methodology</u> compares data sources and discusses some of the main differences.

### Labour market transformation

We have published a <u>Labour market transformation article</u> providing an update on the transformation of labour market statistics.

We welcome your feedback on this latest update and our plans. Please email us at <u>labour.market.transformation@ons.gov.uk</u> to tell us what you think.

#### Coronavirus

For more information on how labour market data sources were affected by the coronavirus (COVID-19) pandemic, see our <u>Coronavirus and the effects on UK labour market statistics article</u>.

### Making our published spreadsheets accessible

Following the <u>Government Statistical Service (GSS)</u> guidance on releasing statistics in <u>spreadsheets</u>, we will be amending our published tables over the coming months to improve usability, accessibility and machine readability of our published statistics. To help users change to the new formats, we will be publishing sample versions of a selection of our tables and, where practical, initially publish the tables in both the new and current formats. If you have any questions or comments, please email us at labour.market@ons.gov.uk.

### Note on headline employment, unemployment and inactivity rates

The headline employment and inactivity rates are based on the population aged 16 to 64 but the headline unemployment rate is based on the economically active population aged 16 and over. The employment and inactivity rates for those aged 16 and over are affected by the inclusion of the retired population in the denominators and are therefore less meaningful than the rates for those aged from 16 to 64. However, for the unemployment rate for those aged 16 and over, no such effect occurs as the denominator for the unemployment rate is the economically active population which only includes people in work or actively seeking and able to work.

### Note on headline employment, unemployment and inactivity levels

The headline employment and unemployment levels are for those aged 16 and over; they measure all people in work or actively seeking and able to work. However, the headline inactivity level is for those aged 16 to 64. The inactivity rate for those aged 16 and over is less meaningful as it includes elderly people who have retired from the labour force.

<sup>1.</sup> The Labour Force Survey (LFS) is a survey of households in the UK.

<sup>2.</sup> The headline employment rate is the number of people aged 16 to 64 in employment divided by the population aged 16 to 64.

<sup>3.</sup> The headline unemployment rate is the number of unemployed people (aged 16+) divided by the economically active population (aged 16+). The economically active population is defined as those in employment plus those who are unemployed.

<sup>4.</sup> The headline inactivity rate is the number of people aged 16 to 64 divided by the population aged 16-64.

<sup>5.</sup> Data from Jun-Aug 2011 to Jun-Aug 2022 have been modelled to make them consistent with the new populations introduced in Jul-Sep 2022.

Source: Labour Force Survey
Labour market statistics enquiries: labour.market@ons.gov.uk

Note: When comparing quarterly changes ONS recommends comparing with the previous non-overlapping 3-month average time period (eg, compare Apr-Jun with Jan-Mar, not with Mar-May).

The split between full-time and part-time employment is based on respondents' self-classification.
 This series does not include all people on these programmes; it only includes those engaging in any form of work, work experience or work-related training.

<sup>3.</sup> These series cover Employees and Self-employed only. These series include some temporary

The total includes those who did not give a reason for working part-time and it therefore does not equal the sum of the other columns in this section of the table.
 To this period has not been reweighted and so is inconsistent with data from Jul-Sep 2022.

onwards.

### **EMPLOYMENT AND JOBS**

Source: returns from public sector organisations

Explanatory Note: The public and private sector employment series have been affected by a number of major reclassifications where bodies employing large numbers of people have moved between the public and private sectors. These major reclassifications are as follows:

Further Education corporations and Sixth Form College corporations in England are included in the private sector from June 2012 but in the public sector for earlier time periods

Royal Mail plc is included in the private sector from December 2013 but in the public sector for earlier time periods.
Lloyds Banking Group plc is included in the public sector from December 2008 to December 2013 but in the private sector for earlier and later time periods.

NatWest Group (formerly Royal Bank of Scotland Group) is included in the public sector from December 2008 to March 2024, but in the private sector for earlier and later time periods. Network Rail is included in the private sector before December 2002. From December 2002 onwards it is included in the public sector (except for the period from June 2003 to

March 2004, when it is included in the private sector).

Northern Rock is included in the public sector from December 2007 until December 2011 but in the private sector for earlier and later time periods.

Bradford and Bingley is included in the public sector from September 2008 but in the private sector for earlier time periods.

Welsh Further Education colleges are included in the private sector from March 2015 but in the public sector for earlier time periods.

Housing associations in England are included in the public sector between September 2008 and September 2017; they are in the private sector for earlier and later time periods. Housing associations in Scotland are included in the public sector from September 2001 until June 2018; they are included in the private sector for earlier and later time periods.

Housing associations in Wales are included in the private sector from June 2018; they are included in the public sector for earlier time periods. Housing associations in Northern Ireland are included in the public sector from March 1999 to June 2020.

Train operating companies in England, Scotland and Wales operating under emergency measure agreements are included in the public sector from June 2020.

The series shown at Table 4 (in columns 6 to 9) for public and private sector employment excluding the effects of major reclassifications show all of the above mentioned bodies included in the private sector for all time periods and excluded from the public sector for all time periods. When using figures from this table, the latest estimate of the number of people employed in the public and private sectors should be taken from columns 1 and 3 respectively. However the quarterly and annual changes in employment shown in these columns are affected by reclassifications. Figures from columns 6 and 8 should be used for assessments of the recent underlying changes in public and private sector employment. The changes in employment shown in these columns are measured on a consistent basis to remove the effect of major reclassifications.

- Estimated as the difference between LFS total employment and the data from public sector organisations.
- 2. LFS employment data for March refer to February-April, June refers to May-July, September refers to August-October and December refers to November-January.

  3. This series excludes locally engaged staff stationed outside the United Kingdom.

  4. This series excludes the Northern Ireland Civil Service.

  5. This series may not exactly equal the sum of the components because each component is independently seasonally adjusted.

More detailed estimates are available in the Public Sector Employment Statistical Bulletin at:

sonnel/bulletins/publicsectoremployment/latest

Workforce jobs enquiries 01633 456776

Sources. Employer surveys, Labour Force Survey and administrative sources

<sup>1.</sup> Workforce Jobs figures are a measure of jobs rather than people. For this reason estimates of self-employment jobs and government supported trainee jobs differ from estimates of people in self-employment and in government supported training and employment programmes shown at Table 3. The estimates for government supported trainees shown in this table exclude trainees with contracts of employment as such people are included in the estimates of employee jobs.

<sup>2.</sup> This series is not exclusively a public sector series as it includes some private sector jobs. See table 4 for estimates of public and private sector employment.

The estimates shown in this table relate to the number of people in employment and should not be used as a proxy for flows of foreign migrants into the UK.

The total series includes people who do not state their country of birth or nationality. The total levels series MGTM does not therefore equal the sum of the \*\*UK\* and \*\*Non-UK\* series.
 This series consists of all 27 EU member states. This series equals the sum of EU14, EU8, EU2 and Other EU.
 This series consists of all 27 EU member states. This series equals the sum of EU14, EU8, EU2 and Other EU.

Source: Labour Force Survey

Labour market statistics enquiries: labour.market@ons.gov.uk

The total series includes people who do not state their country of birth or nationality. The total levels series therefore do not equal the sum of the "UK" and "Non-UK" series.

 This series consists of all 27 EU member states.

 This series consists of those people whose main reason for being economically inactive was because they were students. It does not include all students as some students will be included in the employment and unemployment estimates.

Source: Labour Force Survey
Labour market statistics enquiries: labour.market@ons.gov.uk

Note: When comparing quarterly changes ONS recommends comparing with the previous non-overlapping 3-month average time period (eg, compare Apr-Jun with Jan-Mar, not with Mar-May).

<sup>&</sup>lt;sup>1</sup> Denominator = economically active for that age group.
<sup>2</sup> Data for this period has not been reweighted and so is inconsistent with data from Jul-Sep 2022 onwards.

<sup>\*</sup> Sample size too small for reliable estimate.

Labour market statistics enquiries: labour.market@ons.gov.uk

Note: When comparing quarterly changes ONS recommends comparing with the previous non-overlapping 3-month average time period (eg, compare Apr.-Jun with Jan-Mar, not with Mar-May).

<sup>&</sup>lt;sup>1</sup> Denominator = economically active for that age group.

<sup>&</sup>lt;sup>2</sup> Data for this period has not been reweighted and so is inconsistent with data from Jul-Sep 2022 onwards.

<sup>\*</sup> Sample size too small for reliable estimate.

Data Source: Labour Force Survey.

Labour market statistics enquiries: labour.market@ons.gov.uk

Discouraged workers are those who are not looking for work because they believe no jobs are available.
 Other reasons include people who (i) are waiting the results of a job application, (ii) have not yet started looking for work, (iii) do not need or want employment, (iv) have given an uncategorised reason for being economically inactive, or (v) have not given a reason for being economically inactive.

<sup>3.</sup> Data for this period has not been reweighted and so is inconsistent with data from Jul-Sep 2022 onwards.

<sup>1.</sup> Not in full-time education includes people in part-time education and/or some form of training. Estimates of the number of young people who were not in employment, education or training ("NEET") cannot therefore be derived from this table. Estimates of young people who were NEET are published separately at:

<sup>2.</sup> People in full-time education are employed if they have a part-time job or unemployed if they are looking for part-time employment.

<sup>3.</sup> Denominator = all persons in the relevant age group for economically active, total in employment and economically inactive; economically active for unemployment.

<sup>4.</sup> Data from July to September 2022 onward has been reweighted, causing a step change discontinuity.

<sup>1.</sup> Estimates of total pay include bonuses but exclude arrears of pay.

<sup>2.</sup> The three month average figures are the changes in the average seasonally adjusted values for the three months ending with the relevant month compared with the same period a year earlier.

<sup>3.</sup> Estimates of real earnings are calculated by deflating the nominal earnings estimates by the Consumer Prices Index including owner. occupiers' housing costs (CPIH), our preferred measure of consumer price inflation.

Labour market statistics enquiries: labour.market@ons.gov.uk

- As figures are taken from OECD they will not match ONS published figures for the United Kingdom.
   Employment rate data is for ages 15 to 64. For the United Kingdom and the United States, the lower age limit is 16 years old.
- 3. Unemployment rate data is for ages 15 and over. For the United Kingdom and the United States, the lower age limit is 16 years old.

  4. Estimated values are highlighted with shaded cells.

Data source: ONS Labour Disputes Survey Labour disputes enquiries 01633 455400

In April 2020, collection and publication of labour disputes data were temporarily suspended to protect and prioritise our outputs in response to the coronavirus (COVID-19) pandemic. In June 2022, collection of the Labour Disputes Inquiry restarted, but only for the period from January 2022.

<sup>2</sup> As a result of difficulties in consistently defining a stoppage over time, the number of working days lost is considered to be a better indicator of the impact of labour disputes than the number of recorded stoppages.

<sup>3</sup> A stoppage is defined as a dispute between a single trade union and a single employer. Where a union co-ordinates disputes with several employers, or several unions co-ordinate action with a single employer, this would be counted as multiple stoppages.

Source: ONS Vacancy Survey/ Labour Force Survey

Vacancy Survey enquiries: vacancy.survey@ons.gov.uk, 01633 456776

<sup>\*</sup> Change on previous non-overlapping three month rolling average time period.

<sup>1.</sup> Excludes Agriculture, Forestry and Fishing.

<sup>2.</sup> Unemployment estimates are produced from the Labour Force Survey (LFS) and are always one period behind the ONS Vacancy Survey estimates. This table therefore shows estimates for the same periods as shown in table 1 (which shows LFS estimates).

## **VACANCIES**

## 21 Vacancies by industry

Labour market statistics enquiries: labour.market@ons.gov.uk

<sup>1.</sup> The redundancy level is the number of people who were made redundant in the three months prior to interview. The figure is not seasonally adjusted.

<sup>2.</sup> The redundancy rate is the ratio of the redundancy level for the given quarter to the seasonally adjusted number of employees in the previous quarter, multiplied by 1,000.

<sup>3.</sup> Data for this period has not been reweighted and so is inconsistent with data from Jul-Sep 2022 onwards.

The Labour Force Survey is tabulated by region of residence.

1. Economically active = Employment plus Unemployment.

2. Denominator = all persons aged 16 to 64.

3. Denominator = total economically active

4. Data from July to September 2022 onward has been reweighted, causing a step change discontinuity.

S92000003	Scotland	2,909	-2
N92000002	Northern Ireland	940	-1

Workforce jobs are mainly sourced from employer surveys and are tabulated by region of workplace. HM Forces stationed abroad are included in the UK workforce jobs estimates but not in the regional estimates. The UK workforce jobs estimates therefore do not equal the sum of the regional estimates.

Workforce Jobs data for September 2022 onwards has been affected by the reweighting of the LFS, causing a step change discontinuity.
