

Statistical bulletin

Producer price inflation, UK: January 2025

Changes in the prices of goods bought and sold by UK manufacturers, including price indices of materials and fuels purchased (input prices) and factory gate prices (output prices).

1 . Main points

- Producer input prices fell by 0.1% in the year to January 2025, compared with a revised fall of 1.3% in the year to December 2024.
- Producer output (factory gate) prices rose by 0.3% in the year to January 2025, up from a revised fall of 0.1% in the year to December 2024.
- On a monthly basis, producer input prices rose by 0.8% and producer output (factory gate) prices rose by 0.5% in January 2025.
- Inputs of fuel provided the largest downward contribution to the input PPI annual inflation rate in January 2025, falling by 14.0%.
- Outputs of coke and refined petroleum products provided the main downward contribution to the output PPI annual inflation rate in January 2025, falling by 14.1%.

2 . Producer price inflation rates

Producer input prices fell by 0.1% in the year to January 2025. This is compared with a revised fall of 1.3% in the year to December 2024 (Figure 1). Monthly input prices rose by 0.8% in January 2025, following a revised rise of 0.2% in December 2024 (Table 1).

Producer output (factory gate) prices rose by 0.3% in the year to January 2025. This is up from a revised fall of 0.1% in the year to December 2024 (Figure 1). Monthly output prices rose by 0.5% in January 2025, following a revised fall of 0.2% in December 2024 (Table 1).

Estimates for both December 2024 and January 2025 are provisional. Figures for the latest 12 months are subject to revisions as additional survey data are returned and validated. Effective response rates at the time of first publishing can be found in [Section 7: Data sources and quality](#).

Contributions in this bulletin are provisional and are based on 2024 weights. The January 2025 weights will be recalculated in our next release, so the contributions are likely to change.

Table 1: PPI values and inflation rates
UK, January 2024 to January 2025

	All materials and fuels purchased (GHIP)			All manufactured products (GB7S)		
	Input PPI (2015=100)	Monthly inflation rate (%)	Annual inflation rate (%)	Output PPI (2015=100)	Monthly inflation rate (%)	Annual inflation rate (%)
2024 Jan	148.2	-0.3	-2.9	136.4	0.1	-0.2
Feb	148.6	0.3	-2.2	136.8	0.3	0.5
Mar	148.3	-0.2	-2.6	137.1	0.2	0.6
Apr	149.7	1.0	-1.3	137.5	0.3	1.1
May	148.6	-0.8	-0.8	137.5	0.0	1.7
June	148.1	-0.3	0.1	136.7	-0.6	1.2

3 . Input producer price inflation

Of the 10 product groups for the input Producer Price Index (PPI), 3 made downward contributions to the annual inflation rate in January 2025. The largest of these came from inputs of fuel.

The prices of inputs of fuel fell by 14.0% in the year to January 2025, compared with a fall of 11.6% in the year to December 2024 (Table 2). Both electricity and gas prices fell in the year to January 2025, by 13.8% and 18.4%, respectively.

The largest offsetting upward contributions to the annual inflation rate came from inputs of other parts and equipment, and inputs of domestic food products.

The prices of inputs of other parts and equipment rose by 1.0% in the year to January 2025, compared with a rise of 0.6% in the year to December 2024 (Table 2). This was partly because of "other parts and accessories for motor vehicles".

The prices of inputs of domestic food products rose by 1.7% in the year to January 2025, compared with a rise of 0.9% in the year to December 2024 (Table 2). This was partly because of "dairy cattle, live and raw milk from dairy cattle".

Inputs of other parts and equipment, and inputs of crude oil provided the largest contributions to the change in the annual inflation rate between December 2024 and January 2025, with both providing upward contributions.

The change in the contribution from crude oil prices was partly caused by the monthly price increase of 10.7% in January 2025.

Figure 2: Fuel prices fell by 14.0% in the year to January 2025

Input PPI, annual inflation rates, UK, December 2024 and January 2025

Source: Producer Price Index (PPI) from the Office for National Statistics

The prices of materials and fuels imported by UK manufacturers fell by 0.5% in the year to January 2025, following a revised fall of 2.9% in the year to December 2024. On a monthly basis, prices rose by 2.0% in January 2025, following a revised fall of 0.3% in December 2024. The recent movements in import prices may partly reflect movements in sterling, which fell between December and January but is still 1.0% higher than in January 2024 (Table 3).

Table 3: Imported materials and fuels purchased, and sterling effective exchange rate, index values and inflation rates

UK, January 2024 to January 2025

Imported materials and fuels purchased (GD74)				Sterling effective exchange rate - month average (BK67)		
	Import Price Index (2015=100)	Monthly inflation rate (%)	Annual inflation rate (%)	Sterling Index (Jan 2005=100)	Monthly rate (%)	Annual rate (%)
2024 Jan	139.6	-0.5	-4.0	82.3	0.6	5.1
Feb	140.6	0.7	-3.7	82.4	0.1	5.9
Mar	140.6	0.0	-3.1	82.8	0.5	5.8
Apr	141.6	0.7	-1.5	82.4	-0.5	3.9
May	139.7	-1.3	-1.4	82.8	0.5	3.3
June	139.2	-0.4	-0.3	83.5	0.9	2.2
July	139.1	-0.1	0.4	84.2	0.9	2.0

Source: Import Price Index (IPI) from the Office for National Statistics, and sterling effective Exchange Rate Index (ERI) from the Bank of England

Notes

1. Total imports (GD74) represent roughly one quarter of overall materials and fuels (input prices) in terms of index weight.

4 . Output producer price inflation

Of the 10 product groups for the output Producer Price Index (PPI), 9 made upward contributions to the annual inflation rate in January 2025. The largest of these came from outputs of food products, and "other outputs from manufacturing".

Prices for food products rose by 2.2% in the year to January 2025, compared with a rise of 1.8% in the year to December 2024 (Table 4). This was partly caused by "dairy and cheese products".

Prices for "other outputs from manufacturing" rose by 1.3% in the year to January 2025, compared with a rise of 1.8% in the year to December 2024 (Table 4). This was partly caused by "repair services of machinery".

The offsetting downward contribution to the annual inflation rate came from outputs of coke and refined petroleum products. Prices fell by 14.1% in the year to January 2025, compared with a fall of 18.3% in the year to December 2024 (Table 4).

Coke and refined petroleum products provided the largest downward contribution to the change in the annual inflation rate between December 2024 and January 2025.

Figure 3: Refined petroleum product prices fell by 14.1% in the year to January 2025

5 . Data on producer price inflation

[Producer price inflation time series](#)

Dataset PPI | Released 19 February 2025

A comprehensive selection of data on input and output indices. Contains producer price indices of materials and fuels purchased and output of manufacturing industry by broad sector.

[Output and input producer price inflation: contributions to the annual rates](#)

Dataset | Released 19 February 2025

Contributions to the annual inflation rates of input and output producer price inflation by component and overall inflation rates.

[Producer price inflation](#)

Dataset MM22 | Released 19 February 2025

UK price index data at all manufacturing, aggregated industry and product group levels. Data supplied from individual manufacturers, importers and exporters. Monthly and annual data.

6 . Glossary

Weight

This is the importance of the price of interest relative to other prices collected. With annual chain-linking, this is updated every year using business turnover data.

Index value

Price level in a specific basket of goods.

Annual growth rate

The annual inflation rate.

Link factor

A smoothing factor applied to create a continuous series following a weights change.

Contribution

As the aggregate producer prices indices are built up from individual product indices, it is possible to decompose overall inflation into contributions from different products. Those contributions reflect both the inflation rates for each product and their weight in the index. For more worked examples, see the scenarios in [Section 7: Data sources and quality](#).

Producer price inflation

Changes in the prices of goods bought and sold by UK manufacturers, including price indices of materials and fuels purchased (input prices) and factory gate prices (output prices).

If the producer price inflation rate is a positive value, this indicates that prices have risen, while a negative value indicates that prices have fallen.

Input prices

The input price measures the price of materials and fuels bought by UK manufacturers for processing. It includes materials and fuels that are either imported or sourced from within the domestic market. It is not limited to materials used in the final product but includes what is required by businesses in their normal day-to-day running, such as fuels.

Output prices

The output price (also known as the factory gate price) is the amount received by UK producers for the goods that they sell to the domestic market. It includes the margin that businesses make on goods, in addition to costs such as labour, raw materials and energy, as well as interest on loans, site or building maintenance, or rent.

Services producer price inflation

Quarterly estimates monitoring the changes in prices charged for services provided to UK-based customers for a range of industries.

7 . Data sources and quality

Producer prices development plan

The [Office for Statistics Regulation's \(OSR's\) quality report of the Producer Price Indices \(PPI\)](#) was published in 2023. The report notes the excellent progress made recently with bringing PPI in line with methodological best practice, but also highlights areas that need to be improved.

Our [Producer prices development plan article](#) was published in October 2023, detailing the work that will be undertaken to improve the quality of PPI data and continue to meet user needs.

The Producer Price Index

The PPI uses contributions to identify how indices influence the overall inflation rate. This section gives additional information on the calculation and how to interpret it.

Example scenarios

The following gives examples of how weight and inflation rate changes most commonly affect the contribution. In PPI, the weights usually have greater influence on the contribution to the annual rate, as these tend to show greater change than the annual inflation rate:

- decrease in weight, decrease in inflation rate – contribution is negative
- decrease in weight, no change in inflation rate – contribution is negative
- decrease in weight, increase in inflation rate – contribution is usually negative
- no change in weight, decrease in inflation rate – contribution is usually negative
- no change in weight or inflation rate – no change
- no change in weight, increase in inflation rate – contribution is usually positive
- increase in weight, decrease in inflation rate – contribution is usually positive
- increase in weight, no change in inflation rate – contribution is positive
- increase in weight, increase in inflation rate – contribution is positive

Contributions are calculated using the following formula:

$$\frac{(\text{weight} \times \text{index value} \times \text{link factor})_{\text{for current year}} - (\text{weight} \times \text{index value} \times \text{link factor})_{\text{for previous year}}}{\text{chain linked value for the overall index}}$$

Quality and methodology information (QMI) on strengths, limitations, appropriate uses, and how the data were created is available in our [Producer price indices QMI](#) and our [Services Producer Price Inflation \(SPPI\) QMI](#).

Other useful documentation from the Office for National Statistics (ONS) for the PPI and SPPI are:

- our [Producer Price Indices methods changes article](#)
- our [Chain-linking in business prices article](#)
- our [Impact of methodological improvements on Producer Price Inflation article](#)
- our [Producer price weight changes article](#)
- our [Services producer price weight changes article](#)
- our [Guidance on using indices in Indexation Clauses \(PDF, 197KB\)](#)
- our [PPI methods and guidance \(PDF, 1.18MB\)](#)
- our [SPPI user guidance and methodology](#)
- our [PPI standard errors: 2017 datasets](#)
- our [UK SPPI standard errors: 2016 to 2017 article](#)

Sterling effective exchange rate

The sterling effective exchange rate measures the level of sterling relative to a basket of other currencies. The weights in the basket reflect all UK trade and may therefore be different from those for manufactured goods, which are most relevant for producer prices.

Data revisions policy

Figures for the latest two months are provisional, and the latest 12 months are subject to revisions because of late and revised respondent data. The PPI revisions policy is now in line with that of the national accounts. We publish information about our revisions policy on our [Revisions and corrections of errors webpage](#).

Rounding

Inflation rates in this bulletin may not correspond to index value changes because of rounding, and contributions to the rate may not add up to the rate exactly.

Strengths

These data:

- provide users with valuable insight into the changes in the prices of goods and services bought and sold by UK manufacturers
- are comprehensive, covering many products at a much greater level of detail than other surveys
- are internationally comparable with any country using the classification by product activity (CPA) or the central product classification (CPC) systems
- are created using a rotational sampling method to enable many new products and new respondents to be included
- are chain-linked annually to improve results in deflation by reducing substitution bias

Limitations

The limitations are that:

- some products are produced by only a small number of manufacturers, meaning that there may not be enough manufacturers for a detailed analysis, requiring some estimation
- the data can be revised for 12 months
- the data for the latest two months of the PPI and two quarters of the SPPI are provisional

Response rates in January 2025

In January 2025, the response rate for the domestic PPI was higher than it was in January 2024 and the response rates for the Import Price Index (IPI) and Export Price Index (EPI) were lower (Table 5).

Table 5: PPI, Import Price Index and Export Price Index overall effective response rates at time of first publishing UK, January 2024 to January 2025

	Weighted response (%)		
	PPI (domestic)	IPI	EPI
January 2024	76.4	78.6	68.3
February 2024	83.1	82.8	80.3
March 2024	81.9	81.7	79.0
April 2024	85.0	80.0	77.5
May 2024	82.7	84.6	74.0
June 2024	79.9	83.5	72.7
July 2024	76.0	78.0	67.0
August 2024	79.4	75.4	76.6
September 2024	79.4	79.4	79.3
October 2024	82.6	81.0	77.0
November 2024	85.2	82.0	75.8
December 2024	80.7	80.2	74.0
January 2025	77.4	71.1	66.1
