## 1 . Other pages in this release

- [Labour market overview, UK](#)
- [Earnings and employment from Pay As You Earn Real Time Information, UK](#)
- [Employment in the UK](#)
- [Vacancies and jobs in the UK](#)
- [Public sector employment, UK](#)

## 2 . Main points

- Annual growth in employees' average earnings was 5.2% for regular earnings (excluding bonuses) and 5.3% for total earnings (including bonuses).
- Annual growth in real terms, adjusted for inflation using the Consumer Prices Index including owner occupiers' housing costs (CPIH), was 1.4% for regular pay and 1.5% for total pay.
- Using the Consumer Prices Index excluding owner occupiers' housing costs (CPI) to adjust for inflation, annual growth in real terms was 2.1% for regular pay and 2.3% for total pay.
- Annual average regular earnings growth was 5.1% for the private sector and 5.6% for the public sector.
- The wholesaling, retailing, hotels and restaurants sector showed the strongest regular annual growth rates, followed by construction sector.

The estimates in this bulletin come from a survey of businesses. It is not possible to survey every business each month, so these statistics are estimates based on a sample, not precise figures. Average weekly earnings (AWE), for any given month, are the ratio of estimated total pay for the whole economy, divided by the total number of employees. As a result, AWE is not a measure of rates of pay and can be affected by changes in the composition of an enterprise's workforce.

### 3 . Analysis of average weekly earnings

Figure 1: Average weekly earnings for both total and regular pay showed a long-term steady increase

Average weekly earnings in Great Britain, seasonally adjusted, January 2000 to April 2025

Figure 1: Average weekly earnings for both total and regular pay showed a long-term steady increase

Average weekly earnings in Great Britain, seasonally adjusted, January 2000 to April 2025

Source: Monthly Wages and Salaries Survey from the Office for National Statistics

Average weekly earnings (AWE) were estimated at £720 for total earnings and £674 for regular earnings in April 2025. Figure 1 shows that AWE have steadily increased over the long term.

## Figure 2: Both regular and total pay annual growth rates were lower than the previous three-month period, but remain relatively strong

Average weekly earnings annual growth rates in Great Britain, seasonally adjusted, January to March 2001 to February to April 2025

#### Notes:

1. We have identified an error identified in the inflation measures for April 2025. More detail is provided in our [Vehicle Excise Duty impact on Consumer Price Inflation statement](#). This error will have a minimal impact on the real measures of earnings for April 2025.

The annual growth in employees' average regular earnings (excluding bonuses) was 5.2% in February to April 2025 (Figure 2). This is down from 5.5% in the previous three-month period. It was last lower than 5.2% in July to September 2024, when it was 5.1%.

Annual growth in total earnings (including bonuses) was 5.3% in February to April 2025. This is down from 5.6% in the previous three-month period. It was last lower than 5.3% in July to September 2024, when it was 4.6%.

In real terms (adjusted for inflation using the Consumer Prices Index including owner occupiers' housing costs (CPIH)), regular pay growth was 1.4% in February to April 2025 and total pay growth was 1.5%. Both real regular and total annual growth are down on the previous three-month period.

### Figure 3: Real earnings showed a positive annual growth rate in February to April 2025

Real average weekly earnings three-month annual growth rates in Great Britain, seasonally adjusted, and Consumer Prices Index including owner occupiers' housing costs (CPIH) annual rate, January to March 2001 to February to April 2025

## Figure 3: Real earnings showed a positive annual growth rate in February to April 2025

Real average weekly earnings three-month annual growth rates in Great Britain, seasonally adjusted, and Consumer Prices Index including owner occupiers' housing costs (CPIH) annual rate, January to March 2001 to February to April 2025

Source: Source: Monthly Wages and Salaries Survey, and Consumer price inflation from The Office for National Statistics

#### Notes:

1. We have identified an error identified in the inflation measures for April 2025. More detail is provided in our [Vehicle Excise Duty impact on Consumer Price Inflation statement](#). This error will have a minimal impact on the real measures of earnings for April 2025.

Figure 3 shows a comparison of three-month average weekly earnings real total and regular pay annual growth rates and average three-month inflation. CPIH was an average of 3.7% for February to April 2025.

CPIH is our headline measure of inflation. We also publish our supplementary [X09: Real average weekly earnings using consumer price inflation \(CPI\) dataset](#), excluding owner occupiers' housing costs. Using CPI real earnings, real regular and real total pay rose on the year by 2.1% and 2.3%, respectively. Real regular and real total annual growth were higher in the previous three-month period when they were 2.6% and 2.8%, respectively.

Please note that we have identified an error identified in the inflation measures for April 2025. More detail is provided in our [Vehicle Excise Duty impact on Consumer Price Inflation statement](#). This error will have a minimal impact on the real measures of earnings for April 2025.

Additional insights into the estimate of growth in median and mean pay are provided in the [Earnings and employment from Pay As You Earn Real Time Information, UK bulletin](#). It also provides a timelier estimate of median pay, but this is subject to revisions. The two data sources generally trend well for mean total pay.

However, there will be differences between the two data sources because of timing and definitional differences, as described in our [Comparison of labour market data sources methodology](#).

## Sector and industry

**Figure 4: The regular annual growth rate was 5.1% for the private sector and 5.6% for the public sector in February to April 2025**

Average weekly earnings annual growth rates for total pay (including bonuses) and regular pay (excluding bonuses) by public and private sector in Great Britain, seasonally adjusted, January to March 2001 to February to April 2025

Figure 4: The regular annual growth rate was 5.1% for the private sector and 5.6% for the public sector in February to April 2025

Average weekly earnings annual growth rates for total pay (including bonuses) and regular pay (excluding bonuses) by public and private sector in Great Britain, seasonally adjusted, January to March 2001 to February to April 2025

**Source: Monthly Wages and Salaries Survey from the Office for National Statistics**

Annual average regular earnings growth for the private sector was 5.1% in February to April 2025 (Figure 4). This is down on the previous three-month period when it was 5.5%. Regular growth for the private sector was last lower than 5.1% in December 2021 to February 2022, when it was 4.9%. Annual average regular earnings growth for the public sector was 5.6%. This is up slightly on the previous three-month period, when it was 5.5%.

Annual average total earnings growth for the private sector was 5.3% in February to April 2025. This is down on the previous three-month period when it was 5.5%. Total growth for the private sector was last lower than 5.3% in July to September 2024, when it was 4.9%. Annual average total earnings growth for the public sector was 5.5%. This is up slightly on the previous three-month period when it was 5.4%.

**Figure 5: All sectors except the finance and business services sector had an annual regular growth rate of over 5% in February to April 2025**

Average weekly earnings annual growth rates for regular pay by sector in Great Britain, seasonally adjusted, February to April 2019 to February to April 2025

Figure 5: All sectors except the finance and business services sector had an annual regular growth rate of over 5% in February to April 2025

Average weekly earnings annual growth rates for regular pay by sector in Great Britain, seasonally adjusted, February to April 2019 to February to April 2025

Source: Monthly Wages and Salaries Survey from the Office for National Statistics

All sectors except the finance and business services sector had an annual growth rate of over 5% in February to April 2025 (Figure 5). The wholesaling, retailing, hotels and restaurants sector showed the strongest annual regular growth rate at 7.7%, followed by the construction sector at 5.9%. The finance and business services sector had the lowest annual regular growth rate, at 3.2%.

Similarly, all broad sectors have strong annual growth rates for total growth. The construction and wholesaling, retailing, hotels and restaurants industries showed the strongest annual growth rate, at 7.5% in February to April 2025.

## 4 . Data on average weekly earnings

### [Average weekly earnings](#)

### [Average weekly earnings by sector](#)

Dataset EARN02 | Released 10 June 2025

Average weekly earnings at sector level, including manufacturing, finance and services, Great Britain, monthly, non-seasonally adjusted. Monthly Wages and Salaries Survey.

### [Average weekly earnings by industry](#)

Dataset EARN03 | Released 10 June 2025

Average weekly earnings at industry level including manufacturing, construction and energy, Great Britain, monthly, non-seasonally adjusted. Monthly Wages and Salaries Survey.

### [Real average weekly earnings using consumer price inflation](#)

Dataset X09 | Released 10 June 2025

Average weekly earnings for the whole economy, for total and regular pay, in real terms (adjusted for consumer price inflation), UK, monthly, seasonally adjusted.

## 5 . Glossary

### Arrears payment

Pay award arrears are collected separately on the questionnaire; this specifically covers earnings arising from a backdated pay increase, not late payment of overtime or bonuses. Arrears payments are reflected in estimates at the time they were paid, and not in the period they are awarded for. Therefore, back series are not revised. Our Average weekly earnings (AWE) headline estimates exclude arrears payments.

### Bonus

A bonus is a form of reward or recognition granted by an employer in addition to basic pay. When an employee receives a bonus payment, there is no expectation or assumption that the bonus will be used to cover any specific expense. The value and timing of a bonus payment can be at the discretion of the employer or stipulated in workplace agreements.

When arrears or bonus payments are backdated, people who have left the business but are entitled to these back payments will be included in the number of employees that have received pay in that period. This results in more employees being added to payroll for that month and will have an impact on the average pay as more employees will be included in the calculation. The survey only requests one employee figure so we are unable to split out those who have left the company and only eligible to the backpay and not the regular pay. For the majority of time, the impact of this on regular pay is minimal but for certain periods, where there has been a large backpay covering a long period, the calculation of the average pay will be affected and will be more accurately reflected in the following month's data.

### Consumer Prices Index including owner occupiers' housing costs

As of 21 March 2017, the Consumer Prices Index including owner occupiers' housing costs (CPIH), as detailed in our [Consumer Price Inflation quality and methodology information \(QMI\)](#), became our lead measure of inflation. It is our most comprehensive measure of UK consumer price inflation.

## Revisions

Average weekly earnings (AWE) are generally published on a provisional basis around six to seven weeks after the end of the month in question, although sometimes a week later in the months following Christmas and Easter. The unadjusted estimates are finalised the following month (10 to 11 weeks after the end of the reference period). Seasonally adjusted estimates are subject to further revisions at later dates.

A [more detailed glossary](#) is available.

## 6 . Data sources and quality

Average weekly earnings (AWE) is the lead monthly measure of average weekly earnings per employee, as explained in Section 2: Earnings of our [Guide to labour market statistics methodology](#). It is calculated using information based on the Monthly Wages and Salaries Survey (MWSS), which samples around 9,000 employers, covering around 12.8 million employees in Great Britain.

The survey response rate was 85% in April 2025.

Estimates are available for both total pay (which includes bonus payments) and regular pay (which excludes bonus payments). Estimates are available in both nominal terms (not adjusted for inflation) and real terms (adjusted for inflation).

Estimates of pay growth are also published using HM Revenue and Customs (HMRC) data in the [Earnings and employment from Pay As You Earn Real Time Information, UK bulletin](#). The HMRC estimates are presented in median pay terms, but they also include mean pay, as does AWE. There are some differences between the sources, most notably that the HMRC estimates include arrears payments and any redundancy payments that are made through payroll. Further detail is provided in our [Comparison of labour market data sources methodology](#).

### Data methods

AWE for any given month is the ratio of estimated total pay for the whole economy, divided by the total number of employees. As a result, AWE is not a measure of rates of pay and can be affected by changes in the composition of an enterprise's workforce. They do not, for example, adjust for changes in the proportion of the workforce who work full time or part time, or other compositional changes within the workforce. The estimates do not include earnings of self-employed people.

### Composition of the workforce

AWE reflects changes to the composition of the workforce. In AWE, all other things being equal, an increase in the relative number of employees in a high-paying industry will cause average earnings to rise. This is because the mix of jobs would have changed so that there are more high-paying jobs. Conversely, an increase in the relative number of employees in low-paying industries would cause average earnings to fall.

This effect is sometimes called the employment contribution to earnings growth, as opposed to the wages contribution, which reflects changes in earnings at individual companies, such as pay rises, promotions, and changes in the composition of individual company workforces. In addition to AWE growth, we publish separate estimates of the wage and employment contributions to AWE growth in supplementary tables called the AWE decomposition.

## Base and compositional effects during the coronavirus (COVID-19) pandemic period

During the pandemic period, interpreting average earnings data was difficult. We explain the complexities of interpreting these data in our [How COVID-19 has impacted the Average Weekly Earnings data blog post](#). There were temporary factors that we refer to as base and compositional effects.

The base effect refers to comparing two periods with different circumstances. Throughout the pandemic, different scenarios have affected the base effect. More information on base and compositional effects on the data can be found in our [Average weekly earnings in Great Britain: May 2022 bulletin](#) and Section 6: Measuring the data of our [Average weekly earnings in Great Britain: July 2024 bulletin](#).

For additional analysis on the impact of compositional effects on wage growth, see our [How furlough and changes in the employee workforce have affected earnings growth during the coronavirus \(COVID-19\) pandemic, UK: 2020 to 2021 article](#).

## Real earnings

Real average weekly earnings (AWE) are calculated as non-seasonally adjusted AWE (shown in our accompanying [EARN02: Average weekly earnings by sector dataset](#)) divided by the Consumer Prices Index including owner occupiers' housing costs (CPIH), which is our preferred measure of consumer price inflation (as shown in our [CPIH Index time series L522](#)). The ratio is then referenced as an index with 2015 equals 100, and seasonally adjusted.

We also publish our accompanying [X09: Real average weekly earnings using consumer price inflation \(CPI\) dataset](#) for the whole economy and for both total and regular pay. Our recommended measure of CPI is CPIH, and our headline estimates using this measure are found in our accompanying [EARN01: Average weekly earnings dataset](#). These data have been compiled using the CPI as a supplementary dataset to view alongside the headline estimates produced using the CPIH.

## Seasonal adjustment and revisions

Total pay, bonus pay and regular pay (excluding bonuses) for each sector (a total of 27 series) are seasonally adjusted using X13-ARIMA. Percentage changes are then derived from the seasonally adjusted average pay series.

Each of the 27 series is seasonally adjusted separately, to ensure the optimum seasonal adjustment of each series. The result of this is that relationships that hold in the unadjusted series do not necessarily hold for the seasonally adjusted series. For example, before seasonal adjustment, regular pay plus bonus pay equalled total pay, whereas after seasonal adjustment, they are not necessarily equal.

When there is an exceptionally large change in the series, this can lead to larger differences between regular pay plus bonus pay, and total pay. We saw this in March 2021 and 2020, when the bonus payments pattern changed during the pandemic. Consequently, the direct seasonal adjustment method, which allows for evolving seasonality, caused a larger than normal difference. This is supported by other similar instances, such as in January and February 2009.

Where one-off shocks are present in the data, these are accounted for during the seasonal adjustment process. This was applied in June 2023 to the public sector bonus payments.

## Seasonal adjustment changes last month

In line with international guidance, the seasonal adjustment process was reviewed last month, with all periods in the AWE series opened to revision. This is an annual process, as outlined in our [Average weekly earnings quality and methodology information QMI](#). The review led to revisions to the historical AWE time series, extending back throughout the entire time series. The impact of these revisions on the headline estimates can be found in our [EARN09: Average Weekly Earnings revisions triangle.EARN09: Average weekly earnings revision triangle dataset](#).

## Uncertainty

Sampling variability for average weekly earnings single-month growth rates in percentage points is also available in our [Average weekly earnings in Great Britain: April 2021 bulletin](#).

## More quality and methodology information

More quality and methodology information on strengths, limitations, appropriate uses, and how the data were created is available in our [Average weekly earnings QMI](#).

For more information about some of the main differences between our data sources, see our [Comparison of labour market data sources methodology](#).

Information on the strengths and limitations of this bulletin is available in:

- our [Average weekly earnings in Great Britain: April 2021 bulletin](#)
- our [Guide to labour market statistics methodology](#)
- our [Income and earnings statistics guide methodology](#)
- the [Government Statistical Service Income and earnings interactive dashboard](#)

## Accredited official statistics

These accredited official statistics were independently reviewed by the Office for Statistics Regulation in December 2014. They comply with the standards of trustworthiness, quality and value in [the Code of Practice for Statistics](#) and should be labelled "accredited official statistics".

# Index of Tables

The table below provides an index of the tables appearing in this Statistical Bulletin and it shows how these table numbers match up with the Excel spreadsheet datasets which are available on the website at:  
<https://www.ons.gov.uk/employmentandlabourmarket/peopleinwork/employmentandemployeetypes/bulletins/uklabourmarket/latest/relateddata>

**Notes**  
**March 2025 Data:** In line with international guidance, the seasonal adjustment process has been reviewed and revised this month. All periods in the AWE series have been open to revision

**February 2025 data:** As an exception we have opened up revisions back to October 2020 to allow for late and updated returns we received from one business to be included.  
**This has affected the Whole Economy & sectors: Private; Services; Wholesaling, retailing, hotels & restaurants; and the industry Retail Trade & Repairs for nominal and real, and total and regular earnings**  
**Details on the size of the revisions can be found in Table X04**

The complete set of labour market tables is available from the Labour Market Overview bulletin.

Email: [earnings@ons.gov.uk](mailto:earnings@ons.gov.uk)

1. Estimates of total pay include bonuses but exclude arrears of pay.

2. The three month average figures are the changes in the average seasonally adjusted values for the three months ending with the relevant month compared with the same period a year earlier.

3. Estimates of real earnings are calculated by deflating the nominal earnings estimates by the Consumer Prices Index including owner occupiers' housing costs (CPIH), our preferred measure of consumer price inflation.

4. An error has been identified in the inflation measures for April 2025, this [note](#) provides more detail.

This error will have a minimal impact on the real measures of earnings for April 2025.
