1 . Other pages in this release

Other commentary from the latest labour market data can be found on the following pages:

- [Labour market overview](#)
- [Average weekly earnings in Great Britain](#)
- [Earnings and employment from Pay As You Earn Real Time Information, UK](#)
- [Labour market in the regions of the UK](#)
- [Vacancies and jobs in the UK](#)

2 . Main points

- Estimates from January to March 2025 include the full effect of the improvements in Labour Force Survey (LFS) data collection and sampling methods introduced from January 2024; however, estimates may be subject to the effect of further ongoing improvements.
- An increased amount of volatility will remain in the LFS estimates from mid-2023 and throughout 2024, so we would advise additional caution when interpreting change involving those periods.
- We recommend using the LFS estimates as part of our suite of labour market indicators, alongside workforce jobs, Claimant Count and Pay As You Earn Real Time Information (PAYE RTI) estimates.
- LFS estimates are weighted to 2022 mid-year population estimates for periods from January to March 2019; headline UK seasonally adjusted series before this have been modelled, but other series have a discontinuity at this point.
- In April to June 2025, the estimated UK employment rate increased 0.3 percentage points to 75.3%, the UK unemployment rate increased 0.1 percentage points to 4.7%, and the UK economic inactivity rate decreased 0.4 percentage points to 21.0% compared with January to March 2025.

These are [official statistics in development](#), and we advise caution when using the data. Ongoing challenges with response rates and levels mean that LFS-based labour market statistics will be badged as official statistics in development until further review. Read more in [Section 12: Data sources and quality](#).

3 . Measuring the labour market

Latest Labour Force Survey (LFS) estimates are based on interviews that took place from April to June 2025.

Because of coronavirus (COVID-19) and the suspension of face-to-face interviewing, we had to make operational changes to the LFS, which moved wholly to a by-telephone approach. This introduced an increased non-response bias to the survey, which was reduced by the introduction of housing tenure-based weights into the survey in October 2020, as detailed in our [Coronavirus and its impact on the Labour Force Survey article](#).

However, it was acknowledged that further improvement work was required to deal with the increase in non-response from those with a non-UK country of birth or nationality. As a result, we introduced an adjusted [Labour Force Survey weighting methodology](#) in July 2021. Further information is available in our [Impact of reweighting on Labour Force Survey important indicators, UK: 2022 article](#).

LFS periods from January to March 2019 onwards were reweighted from our December 2024 labour market release. The reweighted LFS estimates incorporate information on the size and composition of the UK population, based on 2022 mid-year estimates. For England, Wales and Northern Ireland, they are projected forward using scaling factors from 2021-based national population projections, published in January 2024. For Scotland, they are projected forward using scaling factors from 2020-based national population projections, published in January 2023. At the same time, the constraint to country of birth information was also removed.

This reweighting creates a discontinuity between the December 2018 to February 2019 and January to March 2019 periods. Users should take this discontinuity into consideration when considering long-term movements in the series. However, we have modelled the seasonally adjusted UK levels of employment, unemployment and economic inactivity, by sex and age band, back to the start of the population revisions in June to August 2011. This ensures that the headline series in Table 1, Table 2 (1) and Table 2 (2) (also available in datasets A02SA, A05SA and A01 Tables 1 and 2) are comparable over the full series. Further information is available in our [Impact of reweighting on Labour Force Survey important indicators, UK: December 2024 article](#).

Reweightings increased the levels of all labour market statuses, but did not address issues surrounding increased LFS volatility, resulting from smaller achieved sample sizes.

Estimates from January to March 2025 include the full effect of the improvements in LFS data collection and sampling methods introduced from January 2024. However, we are continuing our efforts to further improve the response to the survey. Consequently, estimates may be subject to the effect of these further improvements, which may have an ongoing impact on the survey. An increased volatility will remain in the LFS estimates for mid-2023 and throughout 2024, so we would advise additional caution when interpreting survey change measures. We recommend using LFS estimates as part of our suite of labour market indicators, alongside workforce jobs, Claimant Count and Pay As You Earn Real Time Information (PAYE RTI) estimates.

Alongside the labour market publication in May 2025 we published an [article on Labour Force Survey quality](#), including coherence. The timing of this quality article coincided with the first period of data incorporating the full impact of some of the larger changes made from January 2024, now fully reflected in estimates for January to March 2025. The article provides information about current response rates, trends and known biases in LFS data and provides users with information to better understand the current quality of the data.

We are continuing to improve the quality of the LFS, building on our work to date. The achieved sample has increased from 69,847 individuals in January to March 2025, to 74,186 individuals in April to June 2025, as shown in our [LFS performance and quality monitoring report: April to June 2025](#). We advise using these statistics with caution while this work continues, particularly when interpreting change in the LFS, and encourage users to make use of a wide range of data sources where possible.

LFS estimates are currently not considered [accredited official statistics](#) and are designated as [official statistics in development](#).

4 . Summary

Table 1: April to June 2025 headline measures and changes

UK headline economic status levels and rates, total weekly hours, and redundancy levels and rates, seasonally adjusted, April to June 2025

	Level/Rate	Sampling variability of level/rate	Change on quarter	Sampling variability of change on quarter	Change on year	Sampling variability of change on year
Employment (000s, aged 16+)	34,214	± 216	238	± 188	725	± 319
Employment rate (aged 16 to 64)	75.3	± 0.5	0.3	± 0.4	0.7	± 0.7
Unemployment (000s, aged 16+)	1,672	± 94	59	± 104	206	± 139
Unemployment rate (aged 16+)	4.7	± 0.3	0.1	± 0.3	0.5	± 0.4
Economically inactive (000s, aged 16 to 64)	9,073	± 189	-156	± 168	-404	± 284
Economic inactivity rate (aged 16 to 64)	21.0	± 0.4	-0.4	± 0.4	-1.1	± 0.7
Total weekly hours (millions)	1,092.6	N/A	10.5	N/A	20.9	N/A
Redundancies (000s, aged 16 years and over)	107	± 21	-3	± 33	-4	± 35
Redundancy rate (per thousand, aged 16+)	3.6	N/A	-0.1	N/A	-0.2	N/A

Source: Labour Force Survey (LFS) from the Office for National Statistics

Notes

1. Increased volatility of LFS estimates resulting from smaller achieved sample sizes, means that estimates of change should be treated with additional caution.

5 . Employment

Following an increase in the [employment](#) rate since early 2012, there was a decrease from the start of the coronavirus (COVID-19) pandemic. There had been an increase since the end of 2020, followed by a decrease between mid-2023 and early 2024. The rate then increased until mid-2024 and has been relatively stable since.

The employment rate increased in the latest quarter (Apr to June 2025) and over the year.

Figure 1: The employment rate increased in the latest quarter

UK employment rates, people, men, and women (aged 16 to 64 years), seasonally adjusted, between December 2019 to February 2020 and April to June 2025

Figure 1: The employment rate increased in the latest quarter

UK employment rates, people, men, and women (aged 16 to 64 years), seasonally adjusted, between December 2019 to February 2020 and April to June 2025

Source: Labour Force Survey (LFS) from the Office for National Statistics

Notes:

1. Increased volatility of LFS estimates, resulting from smaller achieved sample sizes, means that estimates of change should be treated with additional caution.

In the latest quarter (Apr to June 2025) the increase in employment was mostly because of an increase in the number of full-time employees. Over the year since April to June 2024, we have seen increases in employment numbers across employees and the self-employed for both full-time and part-time workers.

Following decreases in early 2023, the number of people with second jobs increased in the latest quarter (Apr to June 2025) and over the year to 1.321 million (3.9% of people in employment).

We also publish estimates of payrolled employees in our [Earnings and employment from Pay As You Earn Real Time Information, UK bulletin](#) and estimates of the number of jobs in our [Vacancies and jobs in the UK bulletin](#).

Hours worked

The number of total actual weekly hours worked has generally been increasing in the UK since 2020. Total actual weekly hours worked increased in the latest quarter (Apr to June 2025) and over the year. Both men's and women's working hours increased in the latest quarter and over the year.

Average actual weekly hours worked increased in the latest quarter but decreased over the year.

6 . Unemployment

Following decreases in the [unemployment](#) rate since late 2013, this then increased during the coronavirus (COVID-19) pandemic. From early 2021, it decreased to below pre-coronavirus rates until mid-2022. The rate has been largely increasing since.

The unemployment rate increased in the latest quarter (Apr to June 2025) and over the year since April to June 2024.

Figure 2: The unemployment rate increased on the quarter

UK unemployment rates, people, men, and women (aged 16 years and over), seasonally adjusted, between December 2019 to February 2020 and April to June 2025

Figure 2: The unemployment rate increased on the quarter

UK unemployment rates, people, men, and women (aged 16 years and over), seasonally adjusted, between December 2019 to February 2020 and April to June 2025

Source: Labour Force Survey (LFS) from the Office for National Statistics

Notes:

1. Increased volatility of LFS estimates, resulting from smaller achieved sample sizes, means that estimates of change should be treated with additional caution.

In the latest quarter (Apr to June 2025), those unemployed for up to 6 months decreased and those unemployed between 6 and 12 months, and over 12 months increased. The number of people unemployed for up to 6 months, between 6 and 12 months, and over 12 months increased over the year since April to June 2024.

We also publish the [Claimant Count](#), a measure of the number of people who are receiving a benefit principally for the reason of being unemployed. Claimant Count statistics are currently designated as [official statistics in development](#). The UK Claimant Count for July 2025 decreased on the month and the year to 1.695 million.

7 . Economic inactivity

Since comparable records began in 1971, the [economic inactivity](#) rate had generally been falling, however, it increased during the coronavirus (COVID-19) pandemic and fluctuated around this increased rate.

The economic inactivity rate decreased in the latest quarter (Apr to June 2025) and decreased over the year since April to June 2024.

Figure 3: The economic inactivity rate fell in the latest quarter

UK economic inactivity rates, people, men, and women (aged 16 to 64 years), seasonally adjusted, between December 2019 to February 2020 and April to June 2025

Figure 3: The economic inactivity rate fell in the latest quarter

UK economic inactivity rates, people, men, and women (aged 16 to 64 years), seasonally adjusted, between December 2019 to February 2020 and April to June 2025

Source: Labour Force Survey (LFS) from the Office for National Statistics

Notes:

1. Increased volatility of LFS estimates, resulting from smaller achieved sample sizes, means that estimates of change should be treated with additional caution.

Increases in economic inactivity in the first year of the pandemic were largely among those aged 16 to 24 years. Following the pandemic, increases were largely among those aged 50 to 64 years.

In the latest period (Apr to June 2025), the quarterly decrease in economic inactivity was largely because of those aged 16 to 24 and 50 to 64 years, while the annual decrease was largely because of those aged 35 to 64 years.

The quarterly decrease in economic inactivity in April to June 2025 was largely because of those who were students or retired. The annual decrease in economic inactivity since April to June 2024 was largely because of those who were students or looking after family and home.

8 . Redundancies

The number of people reporting [redundancy](#) in the three months before interview decreased in the latest quarter to 3.6 per 1,000 employees in April to June 2025.

We also publish our [HR1: Potential redundancies dataset](#), which shows potential redundancies, covering those notified by employers to the Insolvency Service through the form, broken down by region and industry.

9 . Labour market flows

Flows estimates show that there were net movements from economic inactivity into unemployment and into employment, and from unemployment into employment, between January to March 2025 and April to June 2025.

10 . Data on employment in the UK

[Employment, unemployment and economic inactivity by age group \(seasonally adjusted\)](#)

Dataset A05 SA | Released 12 August 2025

Employment, unemployment and economic inactivity levels and rates by age group, UK, rolling three-monthly figures, seasonally adjusted. Labour Force Survey. These are official statistics in development.

[Labour Force Survey sampling variability \(not seasonally adjusted\)](#)

Dataset A11 | Released 12 August 2025

Sampling variability for Labour Force Survey estimates of employment, unemployment and economic inactivity, 95% confidence intervals, rolling three-monthly figures, non-seasonally adjusted. These are official statistics in development.

[Full-time, part-time and temporary workers \(seasonally adjusted\)](#)

Dataset EMP01 SA | Released 12 August 2025

Full-time, part-time and temporary workers, by sex, UK, rolling three-monthly figures published monthly, seasonally adjusted. Labour Force Survey. These are official statistics in development.

[Actual weekly hours worked \(seasonally adjusted\)](#)

Dataset HOUR01 SA | Released 12 August 2025

Actual weekly hours worked including by sex, full-time, part-time and second jobs, UK, rolling three-monthly figures published monthly, seasonally adjusted. Labour Force Survey. These are official statistics in development.

[Unemployment by age and duration \(seasonally adjusted\)](#)

Dataset UNEM01 SA | Released 12 August 2025

Unemployment by age and duration (seasonally adjusted). These estimates are sourced from the Labour Force Survey, a survey of households. These are official statistics in development.

[Economic inactivity by reason \(seasonally adjusted\)](#)

Dataset INAC01 SA | Released 12 August 2025

Economic inactivity (aged 16 to 64 years) by reason (seasonally adjusted). These estimates are sourced from the Labour Force Survey, a survey of households. These are official statistics in development.

View all related data on our [related data page](#).

11 . Glossary

Actual and usual hours worked

Statistics for [usual hours worked](#) measure how many hours people usually work per week. Compared with [actual hours worked](#), they are not affected by absences and so can provide a better measure of normal working patterns. For example, a person who usually works 37 hours a week, but who was on holiday for a week would be recorded as working zero actual hours for that week, while usual hours would be recorded as 37 hours.

Workers temporarily absent from a job because of the coronavirus (COVID-19) pandemic would still be classed as employed; however, they would be employed working no hours. This has directly affected estimates of total actual hours worked during the pandemic. Since the average actual weekly hours are the average of all in employment, those temporarily absent from a job also affected these estimates.

Claimant Count

The Claimant Count is an [official statistic in development](#) that measures the number of people who are receiving a benefit principally for the reason of being unemployed. Currently the Claimant Count consists of those receiving Jobseekers' Allowance, and Universal Credit claimants in the "searching for work" conditionality group.

Economic inactivity

People not in the labour force (also known as [economically inactive](#)) are not in employment, but do not meet the internationally accepted definition of unemployment because they have not been seeking work within the last four weeks and/or are unable to start work in the next two weeks. The economic inactivity rate is the proportion of people aged between 16 and 64 years who are not in the labour force.

Employment

The term [employment](#) measures the number of people in paid work or who had a job that they were temporarily away from (for example, because they were on holiday or off sick). This differs from the number of jobs because some people have more than one job. The employment rate is the proportion of people aged between 16 and 64 years who are in employment.

Workers furloughed under the Coronavirus Job Retention Scheme (CJRS), or those who were self-employed, but temporarily not in work, had a reasonable expectation of returning to their jobs after a temporary period of absence. Therefore, they were classified as employed under the International Labour Organization (ILO) definition.

A more detailed explanation is available in our [Guide to labour market statistics](#).

Redundancies

The [redundancy](#) estimates measure the number of people who were made redundant or who took voluntary redundancy in the three months before the Labour Force Survey interviews; it does not take into consideration planned redundancies.

Unemployment

The [unemployment](#) estimates measure the number of people without a job who have been actively seeking work within the last four weeks and are available to start work within the next two weeks. The unemployment rate is not the proportion of the total population that is unemployed. It is the proportion of the economically active population (that is, those in work plus those seeking and available to work) that is unemployed.

[More detailed glossary](#) is available.

12 . Data sources and quality

This bulletin relies on data collected from the Labour Force Survey (LFS), the largest household survey in the UK.

Official statistics in development

These statistics are labelled as [official statistics in development](#). Until September 2023, these were called "experimental statistics". Read more about the change in our [Guide to official statistics in development](#).

These statistics are based on information from the Labour Force Survey (LFS). The reweighting exercise has improved the coherence of our LFS estimates with workforce jobs (WFJ) and Pay As You Earn Real Time Information (PAYE RTI) estimates for periods from January to March 2019.

Nonetheless, the ongoing challenges with response rates and levels mean that LFS-based labour market statistics are now badged as official statistics in development until further review. This is also in line with the [letter from the Office for Statistics Regulation \(OSR\)](#), stating that LFS statistics should not be published as [accredited official statistics](#) until the OSR has reviewed them.

We are transforming how we collect and produce the LFS data to improve the quality of these statistics. We have published a [Labour market transformation article](#) providing an update on the transformation of labour market statistics.

More quality and methodology information on strengths, limitations, appropriate uses, and how the data were created is available in our [Labour Force Survey quality and methodology information \(QMI\) report](#).

Coronavirus (COVID-19)

Read more about how the labour market data sources are affected by the coronavirus (COVID-19) pandemic in our [Coronavirus and the effects on UK labour market statistics article](#).

For a comparison of our labour market data sources and the main differences, read our [Comparison of our labour market data sources methodology](#).

Making our published spreadsheets accessible

Following the [Government Statistical Service \(GSS\) guidance on releasing statistics in spreadsheets](#), we will be amending our published tables over the coming months to improve usability, accessibility and machine readability of our published statistics. To help users change to the new formats, we will be publishing sample versions of a selection of our tables, and where practical, we will initially publish the tables in both the new and current formats. If you have any questions or comments, please email labour.market@ons.gov.uk.

Country of birth and nationality labour market outputs

The RTI adjustment applied from January to March 2020 to June to August 2022 was removed from the LFS weighting methodology as part of the reweighting exercise in December 2024, as described in our [Impact of reweighting on LFS important indicators: December 2024 article](#).

Because of quality concerns during the pandemic (as explained in more detail in our A12 dataset), we have removed the labour market status by country of birth and nationality from our [A01: Summary of labour market statistics dataset](#) and from tables accompanying this bulletin and our [Labour market overview bulletins](#). The country of birth and nationality labour market data will also be withdrawn from our time series data.

Our [EMP06: Employment by country of birth and nationality dataset](#) and our [A12: Employment, unemployment and economic inactivity by nationality and country of birth dataset](#) will continue to be made available with additional guidance for users.

We will continue to review and update users accordingly.

Strengths and limitations

Uncertainty in these data

The estimates presented in this bulletin contain uncertainty. For more information on uncertainty, please see our [Uncertainty and how we measure it for our surveys methodology](#).

The figures in this bulletin come from the Labour Force Survey (LFS), which gathers information from a sample of households across the UK, rather than from the whole population. The sample is designed to be as accurate as possible, given practical limitations. Results from sample surveys are always estimates, not precise figures. This can have an impact on how changes in the estimates should be interpreted, especially for short-term comparisons. For more information on sampling, see [Section 2 of our Uncertainty and how we measure it for our surveys methodology](#).

The data in this bulletin come from the Labour Force Survey, a survey of households. It is not practical to survey every household each quarter, so these statistics are estimates based on a large sample.

As the sample gets smaller, the variability of the estimates gets larger. Estimates for small groups, which are based on small subsets of the LFS sample, are less reliable and tend to be more volatile than for larger aggregated groups.

In general, changes in the numbers (and especially the rates) reported in this bulletin between quarters are small and are not usually greater than the level that can be explained by sampling variability. Short-term movements in reported rates should be considered alongside longer-term patterns in the series and corresponding movements in other sources to give a fuller picture.

Information on the quality of estimates is available in our [Labour Force Survey sampling variability table](#).

Comparability

The data in this bulletin follow internationally accepted definitions specified by the [International Labour Organization \(ILO\)](#). This ensures that the estimates for the UK are comparable with those for other countries.

Our annual [Reconciliation report of job estimates article](#) compares the latest workforce jobs series estimates with the equivalent estimates of jobs from the LFS.

We are looking to refresh our work on reconciling estimates of employment from the LFS and WFJ. This work makes several adjustments to both LFS and WFJ estimates to try to account for known differences in concepts, coverage and measurement.

Our [Comparison of labour market data sources methodology](#) compares data sources and discusses some of the main differences.

Source: Labour Force Survey

Labour market statistics enquiries: labour.market@ons.gov.uk

1. The Labour Force Survey (LFS) is a survey of households in the UK.
2. The headline employment rate is the number of people aged 16 to 64 in employment divided by the population aged 16 to 64.
3. The headline unemployment rate is the number of unemployed people (aged 16+) divided by the economically active population (aged 16+). The economically active population is defined as those in employment plus those who are unemployed.
4. The headline inactivity rate is the number of people aged 16 to 64 divided by the population aged 16-64.

Note on headline employment, unemployment and inactivity rates

The headline employment and inactivity rates are based on the population aged 16 to 64 but the headline unemployment rate is based on the economically active population aged 16 and over. The employment and inactivity rates for those aged 16 and over are affected by the inclusion of the retired population in the denominators and are therefore less meaningful than the rates for those aged from 16 to 64. However, for the unemployment rate for those aged 16 and over, no such effect occurs as the denominator for the unemployment rate is the economically active population which only includes people in work or actively seeking and able to work.

Note on headline employment, unemployment and inactivity levels

The headline employment and unemployment levels are for those aged 16 and over; they measure all people in work or actively seeking and able to work. However, the headline inactivity level is for those aged 16 to 64. The inactivity rate for those aged 16 and over is less meaningful as it includes elderly people who have retired from the labour force.

Labour market statistics enquiries: labour.market@ons.gov.uk

Note: When comparing quarterly changes ONS recommends comparing with the previous non-overlapping 3-month average time period (eg, compare Apr-Jun with Jan-Mar, not with Mar-May).

1. The split between full-time and part-time employment is based on respondents' self-classification.

2. This series does not include all people on these programmes; it only includes those engaging in any form of work, work experience or work-related training.

3. These series cover Employees and Self-employed only. These series include some temporary employees.

4. The total includes those who did not give a reason for working part-time and it therefore does not equal the sum of the other columns in this section of the table.

Employment levels and rates by country of birth and nationality

The temporary RTI adjustment applied from January to March 2020 to June to August 2022 was removed from the LFS weighting methodology as part of the reweighting exercise in December 2024, as described in our [Impact of reweighting on LFS key indicators: December 2024](#) article.

Due to quality concerns during the pandemic period (as explained in more detail in our EMP06 dataset), we have removed the labour market status by country of birth and nationality from our A01 dataset and from tables accompanying our Labour market overview and Employment in the UK bulletins. The country of birth and nationality labour market data will also be withdrawn from our time series data.

Our EMP06 dataset will continue to be made available on our website, with additional guidance for users. From our February 2025 publication, EMP06 will be published using the reweighted LFS data. We will continue to review and update users accordingly.

Labour market statistics enquiries: labour.market@ons.gov.uk

1. Discouraged workers are those who are not looking for work because they believe no jobs are available.
2. Other reasons include people who (i) are waiting the results of a job application, (ii) have not yet started looking for work, (iii) do not need or want employment, (iv) have given an uncategorised reason for being economically inactive, or (v) have not given a reason for being economically inactive.

Source: Labour Force Survey

Labour market statistics enquiries: labour.market@ons.gov.uk

1. Not in full-time education includes people in part-time education and/or some form of training. Estimates of the number of young people who were not in employment, education or training ("NEET") cannot therefore be derived from this table. Estimates of young people who were NEET are published separately at:

<https://www.ons.gov.uk/employmentandlabourmarket/peoplenotinwork/unemployment/bulletins/youngpeoplenotineducationemploymentortrainin>

2. People in full-time education are employed if they have a part-time job or unemployed if they are looking for part-time employment.

3. Denominator = all persons in the relevant age group for economically active, total in employment and economically inactive; economically active for unemployment.

Labour market statistics enquiries: labour.market@ons.gov.uk

1. The redundancy level is the number of people who were made redundant in the three months prior to interview. The figure is not seasonally adjusted.

2. The redundancy rate is the ratio of the redundancy level for the given quarter to the seasonally adjusted number of employees in the previous quarter, multiplied by 1,000.
