1 . Overview

The quantity of goods bought (volume) in retail sales are estimated to have fallen by 0.1% in the three months to August 2025 when compared with the three months to May 2025. Falls in automotive fuel and computer and telecoms equipment stores were partly offset by increases in non-store retailing and clothing stores.

Retail sales volumes are estimated to have risen by 0.5% in August 2025, following an increase of 0.5% in July 2025 (revised down from a 0.6% rise in our last bulletin). Clothing stores, butchers and bakers, and non-store retailing grew in August 2025, which some retailers attributed to the good weather.

2 . Retail sales in August

Sales volumes remained slightly below early 2025 levels

Rolling three-month and monthly index for the quantity bought in all retailing, seasonally adjusted, Great Britain, August 2022 to August 2025

Sales volumes remained slightly below early 2025 levels

Rolling three-month and monthly index for the quantity bought in all retailing, seasonally adjusted, Great Britain, August 2022 to August 2025

Source: Monthly Business Survey, Retail Sales Inquiry from the Office for National Statistics

Notes:

1. The chart shows the quantity bought in retail sales over time, for both the rolling three-month and the monthly movements.
2. The monthly path shows more volatility than the smoother three-month series.

Sales volumes fell by 0.1% in the three months to August 2025, compared with the three months to May 2025. This was a slowing in the rate of decline when compared with the 0.6% fall in the three months to July 2025. August 2025 marked the third consecutive period of monthly growth, but volumes did not quite return to their recent March 2025 peak. However, when comparing with the three months to August 2024, sales volumes rose by 0.8%.

Sales volumes rose by 0.5% over the month during August 2025, following a 0.5% rise in July, and rose by 0.7% over the year to August 2025.

Volumes were down by 2.1%, compared with their pre-coronavirus (COVID-19) pandemic level in February 2020.

These data are available in our [Retail Sales Index dataset](#).

3 . Retail sector volumes

Three-monthly sales volumes fell the most in the other non-food sector, partially offset by rises in non-store retailing and clothing

Volume sales, three-monthly and monthly percentage change, seasonally adjusted, Great Britain, August 2025

Three-monthly sales volumes fell the most in the other non-food sector, partially offset by rises in non-store retailing and clothing

Volume sales, three-monthly and monthly percentage change, seasonally adjusted, Great Britain, August 2025

Source: Monthly Business Survey, Retail Sales Inquiry from the Office for National Statistics

Notes:

1. Monthly growth rates can be volatile. Monthly growth should therefore be used with caution and alongside other measures, such as the three-month growth rate.
2. Non-store retailing refers to retailers that do not have a store presence. While the majority is made up of online retailers, it also includes other retailers, such as stalls and markets.
3. More data are available in our [Retail Sales Index dataset](#).

Sales volumes over the three months to August 2025 dropped marginally, with falls in other non-food stores, such as second-hand goods retailers (which includes auction houses and antiques dealers), and retailers of computers and telecoms equipment. Automotive fuel sales also fell. This was partly offset by an increase in non-store retailers (which are mainly online) and clothing stores.

Sales volumes grew steadily over the month to August 2025, matching the July 2025 increase. Non-food stores (the total of department, clothing, household, and other non-food stores) rose by 1.1%. The rise was across all four sub-sectors, mainly because of increases in second-hand goods (within other non-food) and clothing stores. Retailer comments mentioned dry weather as a reason for the increase.

Food stores also saw a rise. Specialist food stores (such as butchers and bakers) mostly recovered from poor sales in July 2025, with reports of improved footfall. Non-store retailers also increased, making this their seventh consecutive monthly rise.

The [Met Office climate summaries](#) reported that the UK experienced below average rainfall, while temperatures were above average across all four nations.

4 . Online retail values

Three-monthly online sales rose for the fifth consecutive period in August 2025

Value sales, three-monthly and monthly percentage change, seasonally adjusted, Great Britain, August 2025

Three-monthly online sales rose for the fifth consecutive period in August 2025

Value sales, three-monthly and monthly percentage change, seasonally adjusted, Great Britain, August 2025

Source: Monthly Business Survey, Retail Sales Inquiry from the Office for National Statistics

Notes:

1. Monthly growth rates can be volatile. Monthly growth should therefore be used with caution and alongside other measures, such as the three-month growth rate.
2. Non-store retailing refers to retailers that do not have a store presence. While the majority is made up of online retailers, it also includes other retailers, such as stalls and markets.
3. More data, such as the proportion of sales made online, are available in our [Retail Sales Index internet sales dataset](#).

The amount spent online, known as "online spending values", rose by 2.0% when comparing the three months to August 2025 with the three months to May 2025, and by 3.4% when comparing with the three months to August 2024.

Considering the monthly series, sales values rose by 0.4% over the month to August 2025, and by 4.7% when comparing August 2025 with August 2024.

Total spend (the sum of in-store and online sales) rose by 0.6% over the month. As a result, the proportion of sales made online showed little change, falling from 27.7% in July 2025 to 27.6% in August 2025.

5 . Data on retail sales

[Retail Sales Index](#)

Dataset | Released 19 September 2025

A series of retail sales data for Great Britain in value and volume terms, seasonally and non-seasonally adjusted.

[Retail sales pounds data](#)

Dataset | Released 19 September 2025

Total sales and average weekly spending estimates for each retail sector in Great Britain in thousands of pounds.

[Retail Sales Index internet sales](#)

Dataset | Released 19 September 2025

Internet sales in Great Britain by store type, month and year.

[Retail Sales Index categories and their percentage weights](#)

Dataset | Released 28 March 2025

Retail sales categories and descriptions, and their percentage of all retailing in Great Britain.

6 . Data sources and quality

For August 2025, the Retail Sales Index (RSI) response rates were 57.9% based on returned forms, 4.3 percentage points below the average of initial estimates over the past twelve months. This accounted for 82.6% of total turnover coverage of the sample population. Historical response information is available in our [Retail sales quality tables dataset](#).

Information on how we calculated the data, including strengths and limitations, and a glossary of relevant terms, is available in our [RSI quality and methodology information \(QMI\)](#).

Re-referencing of indices to 2023 equals 100

Previously, retail sales indices were referenced to 2022 equals 100 (that is, for each component, the average of the monthly indices of that year are set to equal 100). Ahead of the publication of [UK National Accounts, the Blue Book: 2025](#) (released on 31 October 2025), the reference period has been updated to 2023 equals 100 for this release. Blue Book 2024 consistent data will be included for the first time in our [GDP quarterly national accounts, UK: April to June 2025 bulletin](#) (released on 30 September 2025). Please note that this does not affect growth rates.

Seasonal adjustment

Seasonally adjusted estimates are derived by estimating and removing calendar effects (for example, Easter moving between March and July) and seasonal effects (for example, increased spending in December because of Christmas) from the non-seasonally adjusted estimates.

The Office for National Statistics (ONS) uses the X-13ARIMA-SEATS approach to seasonal adjustment. Seasonal adjustment parameters are monitored closely and regularly reviewed. Improvements following our annual seasonal adjustment review have been implemented in this release. More information is available on our [Seasonal adjustment methodology page](#).

Seasonal adjustment is applied at the industry level, and the seasonally adjusted series are aggregated to create estimates by industry sector and total retail. As part of our quality assurance approach, residual seasonality checks are completed regularly by our time series analysis team on both the directly seasonally adjusted series and the indirectly derived aggregate time series. Based on current data, we find no residual seasonality in the main aggregate for monthly retail sales estimates.

Accredited official statistics

These [accredited official statistics](#) were independently reviewed by the Office for Statistics Regulation in July 2015. They comply with the standards of trustworthiness, quality and value in the [Code of Practice for Statistics](#) and should be labelled "accredited official statistics".

Estimates in this table have been produced by combining a breakdown of commodity sales from 54 large retailers with total sales from other retailers.

The monthly periods consist of 4 weeks except for March, June, September and December which are 5 weeks. January 2025 is also a 5 week period.

The quarterly indices are the weighted averages of the monthly indices for the months within the quarter, the weights being the number of weeks in each monthly period.

¹ The Food, drink and tobacco category, Household goods category and Other non-food category include revisions to the commodity classifications provided by respondents.

In July 2018, we increased our sample for the commodity breakdown from 31 to 54 retailers to improve coverage and better represent the commodities sold. Growth rates may not be comparable as a result. This does not impact the main retail sales data.
