

Statistical bulletin

Index of Production, UK: October 2025

Movements in the volume of production for UK production industries: manufacturing, mining and quarrying, energy supply, and water and waste management.

1. Main points

- Production output was estimated to have decreased 0.5% during the three months to October 2025, compared with the three months to July 2025; this is the sixth consecutive fall in the three-month-on-threemonth growth.
- The largest negative contributor to the three-monthly fall in October 2025 came from "manufacturing" (down 0.7%), supported by "mining and quarrying" (down 1.9%); this was partially offset by increases in "water supply and sewerage" (up 1.2%) and "electricity and gas" (up 0.3%).
- 6 of the 13 subsectors in "manufacturing" decreased during the three months to October 2025; this fall mainly came from "transport equipment" (down 8.7%).
- Monthly production output was estimated to have increased 1.1% in October 2025; this follows a fall in September 2025 (down 2.0%) and a rise in August 2025 (up 0.3%).
- The rise in monthly production output in October 2025 resulted from widespread strength across the four main sectors, with increases in "manufacturing" (up 0.5%), "mining and quarrying" (up 4.3%), "electricity and gas" (up 2.1%), and "water supply and sewerage" (up 1.5%).
- 6 of the 13 manufacturing subsectors saw a monthly increase in October 2025, with the largest positive contributions at subsector level coming from "manufacture of transport equipment (up 3.6%), caused by growth from "manufacture of motor vehicles" (up 9.5%); this growth was further supported by "manufacture of machinery" (up 4.4%) and "other manufacturing and repair" (up 2.8%).

2. Data on the Index of Production

Index of Production time series

Dataset DIOP | Released 12 December 2025

Movements in the volume of production for the UK production industries: manufacturing, mining and quarrying, energy supply, and water and waste management. Figures are seasonally adjusted.

Output of the production industries

Dataset | Released 12 December 2025

Index values and growth rates for production, manufacturing, and the main industrial groupings in the UK.

Index of Production and industry sectors to four decimal places

Dataset | Released 12 December 2025

Monthly index values for production and the main Index of Production sectors in the UK to four decimal places.

Monthly Business Survey turnover in production industries

Dataset | Released 12 December 2025

Monthly Business Survey production industries' total turnover, domestic sales and exports in the UK. Figures are in current price and are non-seasonally adjusted.

Export proportions for manufacturing industries

Dataset | Released 12 December 2025

Monthly, quarterly and annual export data for the manufacturing industries, collected by the Monthly Business Survey at industry level in the UK.

All data related to the Index of Production (IoP) are available on our Related data page.

3. Data sources and quality

The Index of Production (IoP) uses data from a variety of sources. It is calculated by taking turnover and removing the effect of price changes, or by using direct volume estimates.

Most of these data are collected as "turnover values" through the Monthly Business Survey (MBS). Direct volume series are also collected by the Department for Energy Security and Net Zero (DESNZ), and the International Steel Statistics Bureau (ISSB) for steel industries.

The MBS is fully online. Business owners can log on from any location and submit their data at an appropriate time.

From January 2018, Value Added Tax (VAT) data have also been included for 64 production industries for small-and medium-sized businesses. More information is available in our <u>VAT turnover data in National Accounts:</u> <u>background and methodology</u>.

A comprehensive list of the IoP source data can be found in our <u>Gross domestic product (GDP) data sources catalogue</u>.

Response rates for October 2025

MBS response rates were 73.4% for October 2025, based on forms returned. This accounted for 87.1% of total turnover coverage of the sample population. For further information, see our <u>current and historical MBS</u> (production) response rates dataset.

Quality and methodology

The data reported in IoP bulletins and datasets are estimates that are subject to uncertainty, such as sampling variability and non-sampling error. More information is available in Section 2 of our <u>Uncertainty and how we measure it for our surveys web page</u>.

More quality and methodology information (QMI) on strengths, limitations, appropriate uses, and how the data were created is available in our <u>Index of Production, UK QMI</u>.

Accredited official statistics

These accredited official statistics were <u>independently reviewed by the Office for Statistics Regulation in April 2014</u>. They comply with the standards of trustworthiness, quality and value in the <u>Code of Practice for Statistics</u> and should be labelled "accredited official statistics".

Revisions to Index of Production

In line with the <u>National Accounts Revision Policy</u> this release publishes data for October 2025 for the first time, with no previous periods open for revision.

Restarting of Producer Prices publications

Following the <u>restart of monthly business prices publications on 22 October 2025</u>, business prices data with corrected chain-linking methods and updated historic weights have been used in the IoP dataset for producer price indices (PPI), import prices indices (IPI), export price indices (EPI), and service producer price indices (SPPI) for July, August, September and October 2025 in this release. The quarterly SPPI estimates are splined to months for use in IoP calculations.

These updates to business prices data will be incorporated in IoP in line with our national accounts revisions policy.

Further information on the chain-linking error and the impact of methodological changes in the producer prices dataset are detailed in our <u>Impact of correction to chain-linking methodology used in Producer Price Indices and Services Producer Price Indices: October 2025 article published on 22 October 2025.</u>

Seasonal adjustment

The monthly estimates of IoP are seasonally adjusted. Seasonal adjustment is the process of removing the variations associated with the time of year, or the arrangement of the calendar, from a data time series.

IoP estimates, as for many data time series, are difficult to analyse using raw data because seasonal effects dominate short-term movements. Identifying and removing the seasonal component leaves the trend and irregular components.

We use the X-13-ARIMA-SEATS approach to seasonal adjustment. Seasonal adjustment parameters are monitored closely and are regularly reviewed. For more information, please see our <u>Seasonal adjustment methodology page</u>.

In our IoP estimates, seasonal adjustment is applied at the industry level. The seasonally adjusted series are aggregated to create estimates by sector and total IoP output. As part of our quality assurance approach, residual seasonality checks are regularly completed by our time series analysis team on both the directly seasonally adjusted series and the indirectly derived aggregate time series.

This topic is explored further in our <u>Assessing residual seasonality in published outputs article</u> updated on 30 September 2025.
