1 . Main points

- Average UK monthly private rent increased by 3.3%, to £1,388, in the 12 months to June 2026 (provisional estimate); this annual growth rate remained unchanged from the 12 months to May 2026.
- Average rents increased to £1,446 (3.4%) in England, £843 (4.9%) in Wales, and £1,012 (1.3%) in Scotland, in the 12 months to June 2026.
- In Northern Ireland, average rents increased to £877 (2.9%), in the 12 months to April 2026.
- In England, private rent annual inflation was highest in the North East (6.3%), and lowest in London (2.2%), in the 12 months to June 2026.
- Average UK house prices increased by 2.7%, to £271,000, in the 12 months to May 2026 (provisional estimate); this annual growth rate is down from 3.9% in the 12 months to April 2026.
- Slowing of the UK house price annual inflation rate was caused by a base effect from a small monthly price rise in May 2026 and a large monthly rise in May 2025, following the April 2025 Stamp Duty Land Tax changes in England and Northern Ireland.
- Average house prices increased to £292,000 (2.3%) in England, £215,000 (4.2%) in Wales, and £196,000 (4.4%) in Scotland, in the 12 months to May 2026.

Price Index of Private Rents (PIPR) data became [official statistics](#) on 20 May 2026. Because of data collection differences, we advise caution when comparing Scotland and Northern Ireland estimates with other UK countries. Read more in [Section 10: Data sources and quality](#).

2 . UK private rent and house prices

Figure 1: UK house price inflation slowed since last month while rent inflation remained the same

Private rent and house price annual inflation, UK, January 2016 to June 2026

Figure 1: UK house price inflation slowed since last month while rent inflation remained the same

Private rent and house price annual inflation, UK, January 2016 to June 2026

Source: Price Index of Private Rents (PIPR) and UK House Price Index (HPI) from the Office for National Statistics

Notes:

1. Northern Ireland private rent data are currently available up to April 2026. To produce UK rents statistics up to June 2026, Northern Ireland's index for the latest two months has been estimated using the monthly average of Northern Ireland's latest two-month inflation rate.
2. PIPR estimates for the UK series for May 2026 and June 2026 will be revised in line with PIPR's two-month revision policy. More information is available in [Section 10: Data sources and quality](#).

Average UK monthly private rents increased by 3.3%, in the 12 months to June 2026 (provisional estimate). This was unchanged from the 12 months to May 2026. UK rents annual inflation has generally been slowing since December 2024.

Average UK house prices were £271,000 in May 2026 and increased by 2.7% (provisional estimate) in the 12 months to May 2026. This annual growth was down from 3.9% (revised estimate) in the 12 months to April 2026.

The slowing in the UK annual rate was caused by a [base effect](#) from the aftermath of the Stamp Duty Land Tax (SDLT) changes in England and Northern Ireland on 1 April 2025, similar to SDLT effects seen previously. The annual rate slowed in May 2026 because average UK house prices rose by a smaller amount (0.3%) between April and May 2026 than in the same period a year ago (1.5%).

HM Land Registry (HMLR) publishes the full [UK House Price Index report](#) and monthly data.

Our [local housing statistics tool](#) summarises the latest private rents and house price statistics for local areas across the UK.

Revisions

UK monthly rents estimates for the latest two months, and UK House Price Index (HPI) estimates for the latest 12 months, are provisional and subject to revision ([see Section 10: Data sources and quality](#)). All statistics are non-seasonally adjusted estimates, unless stated otherwise.

UK HPI first estimates (provisional) are based on sales volumes reflecting around 48% of all sales in Great Britain in May 2026. Transaction volumes for older periods and new builds remain lower than they have been historically.

Users should be aware that UK HPI revisions may be larger than those seen historically and should note the uncertainty around new build prices. However, recent methodology improvements reduce this uncertainty.

3 . House prices across the UK and by English region

The average house price for England was £292,000 in May 2026, up by 2.3% (£6,000) from a year earlier. This annual inflation rate was lower than in the 12 months to April 2026 (4.0%).

The slowing in England's annual inflation rate this month was caused by a [base effect](#) from the small monthly price rise (0.1%) in May 2026 compared with the large monthly rise (1.8%) a year ago, which resulted from the aftermath of Stamp Duty Land Tax changes in England and Northern Ireland on 1 April 2025.

The average house price for Wales was £215,000 in May 2026, up by 4.2% (£8,000) from a year earlier. This annual rise was higher than in the 12 months to April 2026 (3.5%).

The average house price for Scotland was £196,000 in May 2026, up by 4.4% (£9,000) from a year earlier. This annual rise was higher than in the 12 months to April 2026 (3.2%).

The average house price for Northern Ireland was £198,000 in Quarter 1 (Jan to Mar) 2026, up by 7.4% (£14,000) from Quarter 1 2025.

Figure 2: Annual house price inflation is highest in the North East

Annual house price inflation, English regions, May 2026

Figure 2: Annual house price inflation is highest in the North East

Annual house price inflation, English regions, May 2026

Source: UK House Price Index from the Office for National Statistics

Notes:

1. Estimates are not seasonally adjusted.

The North East was the English region with the highest house price inflation, at 5.9%, in the 12 months to May 2026. This was down from 9.7% in the 12 months to April 2026.

Annual house price inflation was lowest in London. Prices fell by 3.7% in the 12 months to May 2026, down from an annual fall of 2.3% in the 12 months to April 2026. This is the ninth consecutive month where there has been an annual fall in house prices in London.

There was a modest annual price fall of 0.3% in Outer London in the 12 months to May 2026, but London's negative annual rate primarily came from Inner London (negative 5.9%), where there were large annual falls in average house prices in several local authorities, such as Westminster and Tower Hamlets.

4 . Private rents across the UK

The average monthly private rent in the UK was £1,388 in June 2026. This is £44 (3.3%) higher than 12 months ago.

Figure 3: The average private monthly rent in the UK was £1,388 in June 2026

Average private rent, UK overview and across the UK, January 2015 to June 2026

Notes:

1. Northern Ireland private rent data are currently available up to April 2026. To produce UK rent statistics up to June 2026, Northern Ireland's index for the latest two months has been estimated using the monthly average of Northern Ireland's latest two-month inflation rate.
2. UK PIPR estimates for May 2026 and June 2026 will be revised in line with PIPR's two-month revision policy. More information is available in [Section 10: Data sources and quality](#).
3. Northern Ireland rent data are for advertised new lets.
4. Because of data collection limitations, Scotland rents data (used in the PIPR) have historically been predominately advertised new lets (see [Section 10: Data sources and quality](#)). Users should bear this in mind when comparing across the UK.

England

Average monthly rent for England was £1,446 in June 2026, up by 3.4% (£47) from a year earlier. This annual rise was unchanged in the 12 months to May 2026 (3.4%).

Wales

Average monthly rent for Wales was £843 in June 2026, up by 4.9% (£39) from a year earlier. This annual rise was higher than in the 12 months to May 2026 (4.7%), but lower than the most recent peak of 8.9% in March 2025.

Scotland

Average monthly rent for Scotland was £1,012 in June 2026, up by 1.3% (£13) from a year earlier. This annual rise was higher than in the 12 months to May 2026 (1.0%) and is the first pick up in the annual inflation rate since December 2024. Scotland's annual rate has been generally slowing since the record-high annual rise of 11.7% in August 2023.

Previous data collection limitations meant that historically, Scotland rents data, which are used in the Price Index of Private Rents (PIPR) stock measure, were mainly for advertised new lets. The Scottish Government have been improving their data collection process, which is increasing their collection of achieved rents for both existing and new tenancies. More information is in [Section 4 of our Price Index of Private Rents quality and methodology information report](#).

From September 2022 to March 2025, measures relating to in-tenancy rent increases were implemented in Scotland (see Section 10: Data sources and quality). We advise users to bear this in mind when interpreting estimates for Scotland and comparing with other UK countries.

Northern Ireland

Average monthly rent in Northern Ireland was £877 in April 2026, up by 2.9% (£25) from a year earlier. This annual rise was lower than in the 12 months to March 2026 (3.3%) and the lowest in over five years. Northern Ireland's annual inflation rate has been generally slowing since the record-high annual rise of 9.9% in April 2024.

Northern Ireland's rents data are for advertised new lets. We advise users to bear this in mind when comparing across the UK (see [Section 10: Data sources and quality](#)).

Figure 4: Rent annual inflation increased in Wales and Scotland while remaining unchanged in England

Private rent annual inflation across the UK, January 2016 to June 2026

Notes:

1. Northern Ireland rent data are currently available up to April 2026 and are for advertised new lets.
2. Because of data collection limitations, Scotland rents data (used in the PIPR) have historically been predominately advertised new lets (see [Section 10: Data sources and quality](#)). Users should bear this in mind when comparing across the UK.

5 . Private rents by English region

Figure 5: The North East was the English region with the highest annual rent inflation

Private rent annual inflation, English regions, June 2026

Figure 5: The North East was the English region with the highest annual rent inflation

Private rent annual inflation, English regions, June 2026

Source: Price Index of Private Rents (PIPR) from the Office for National Statistics

The North East continued to have the highest rent annual inflation rate of all English regions, at 6.3%, in the 12 months to June 2026. This annual rise was higher than the 12 months to May 2026 (5.9%).

Rent annual inflation remained lowest in London, at 2.2%, in the 12 months to June 2026, up from 2.0% in the 12 months to May 2026.

Average rent was highest in London (£2,302) and lowest in the North East (£781) in June 2026.

Figure 6: Privately renting a property is most expensive in London

Average private rent, English regions, January 2015 to June 2026

6 . Private rents for local areas

Average monthly private rents vary across local authorities in England and Wales, and Broad Rental Market Areas in Scotland and Northern Ireland.

In June 2026, average monthly rent was highest in Kensington and Chelsea, London (£3,596) and lowest in Dumfries and Galloway, Scotland (£552). Excluding London, the local area with the highest average monthly rent in June 2026 was Oxford, South East (£1,961).

Figure 7: Average rent was more than six times higher in the most expensive local area than in the least expensive

Average private rent price and annual inflation, local authorities in England and Wales and Broad Rental Market Areas in Scotland and Northern Ireland, January 2015 to June 2026

1. Values of [x] in this tool represent data that are not available.
2. Northern Ireland rent data are currently available up to April 2026.

7 . Private rents by property size

The average UK monthly private rent in June 2026 was highest for detached properties (£1,577) and lowest for flats and maisonettes (£1,355). Average UK private rent was highest for properties with four or more bedrooms (£2,061) and lowest for properties with one bedroom (£1,127).

Figure 8: The average private rent price increases with property size

Average private rent price, local authorities in England and Wales (June 2026) and Broad Rental Market Areas in Scotland (June 2026) and Northern Ireland (April 2026)

Notes:

1. Northern Ireland rent data are currently available up to April 2026.

9 . Glossary

Administrative data

Data that are already collected for other purposes through day-to-day activities. Examples include health records or social security payments.

Annual percentage change

The rate at which prices rise and fall over a 12-month period. Interchangeable with "annual inflation" (or "annual growth", if positive).

Non-seasonally adjusted

A non-seasonally adjusted series is one that includes seasonal effects.

Price inflation

Inflation is the rate at which prices rise and fall over time.

10 . Data sources and quality

Following actions taken in response to the Office for Statistics Regulation (OSR's) [Spotlight on Quality Assessment: PIPR report](#), in October 2024, we reviewed the "official statistics in development" status of the Price Index of Private Rents (PIPR). On 20 May 2026, PIPR data became "official statistics" and are no longer considered to be "in development". We will continue to work on PIPR as part of our commitment to the continuous improvement of our statistics. Read more in our [Guide to official statistics in development](#) and our [Private rental prices development plan article](#).

UK House Price Index

HM Land Registry (HMLR) publishes the full [UK House Price Index \(HPI\) report](#) and monthly data. Additionally, the Registers of Scotland publishes [UK HPI reports](#), and Land and Property Services Northern Ireland publishes [Northern Ireland HPI reports](#).

UK HPI's revision policy is in Section 4.4 of HMLR's [About the UK House Price Index guidance](#). The Office for National Statistics (ONS) introduced an improvement to HPI's imputation method for Great Britain on 20 August 2025, which reduces initial overestimation of new build estimates in provisional estimates. More detail about this methods improvement is available in our [How we are developing our house price statistics blog post](#) and in [Section 4.9 of HMLR's About the UK House Price Index guidance](#).

UK HPI sales volume estimates for older periods and new builds remain lower than historical averages but continue to improve. Users should be aware that revisions may be larger than they have been historically and should note the [uncertainty](#) in new build estimates. This is because of low availability of new build data for the most recent months.

The methods improvement enacted on 20 August 2025 reduces uncertainty in new build estimates, and HMLR continues ongoing activity to reduce the average time to register new build sales. We will continue to monitor the new build series and UK HPI revisions, and to identify potential areas for further improvements in the future.

Price Index of Private Rents

The reference period for indexing the Price Index of Private Rents (PIPR) is January 2023, and statistics are available from January 2015. PIPR coverage was expanded to the whole UK and small improvements were made to the Great Britain historical series by incorporating additional data in March 2025.

Our [Price Index of Private Rents, UK: historical series dataset](#) links the Index of Private Housing Rental Prices (IPHRP) trends before 2015, with PIPR trends from 2015 onwards, down to region level. We advise caution when comparing the trends before 2015 with later estimates because of the methodology change in January 2015.

Our [Private rental prices development plan, UK: updated May 2026](#) summarises our updated responses and actions taken relating to user requests, and outlines planned further developments relating to PIPR.

Sources for Price Index of Private Rents

Our [Quality assurance of administrative data used in the PIPR](#) describes PIPR data sources.

Data collection for Price Index of Private Rents

In England and Wales, achieved rents data are collected for both new and existing tenancies.

In Northern Ireland, rents data are for newly advertised lets.

Until recently, Scotland rents data were predominantly for advertised new lets, with only a small proportion based on existing lets data. Therefore, price changes for existing tenancies were largely estimated for Scotland. Scottish Government have been improving their data collection process, which is increasing their collection of achieved rents for both existing and new tenancies.

Measures relating to in-tenancy rent increases were implemented in Scotland from September 2022 to March 2025. More detail is available in our [Price Index of Private Rents, UK dataset](#) and in Section 10: Data sources and quality of our [Private rent and house prices, UK: March 2025 bulletin](#). During this period, these measures did not apply to the price of new lets used to estimate the price of existing tenancies. Scottish Government statisticians believe that the lack of data on existing tenants, to which these measures previously applied, will have led to overestimation in stock prices and indices for Scotland during this period.

Revision policy for Price Index of Private Rents

Northern Ireland rents data are not available for the latest two months. For a given Northern Ireland series (including breakdowns), index values for the latest two months have been estimated by applying the monthly average of the latest available two-month inflation rate for that series to the latest available index value for that series.

These imputed index values for the latest two months for Northern Ireland were aggregated with the corresponding data for Great Britain. We used PIPR weights to produce provisional UK estimates for the latest two months for each UK series (including UK-level breakdowns).

Each subsequent month, updated Northern Ireland data are used to revise estimates for the UK, providing a two-month revision period for the UK series in PIPR.

Strengths and limitations

Strengths

The PIPR reflects price changes for all privately rented properties, including existing tenancies and newly advertised lets.

The PIPR produces prices that are comparable over time and publishes to an increased level of geographic granularity.

Our [How we measure rental price inflation blog post](#) explains the differences between measures of new-let annual inflation and the Price Index of Private Rents (PIPR). The PIPR measures the price change of the entire privately rented stock.

Limitations

While mitigation efforts are made, price changes at a local level can be influenced by the type and number of properties collected in any given period, which may lead to volatility. Longer-term trends should be considered for lower-level geographic breakdowns, rather than monthly movements.

Estimates for the City of London and Isles of Scilly are not published because of low collection volumes.

Because of differences in data collection and housing policy, caution is advised when comparing estimates for Scotland and Northern Ireland with other areas in England and Wales, and within Scotland. More information is available in our [Price Index of Private Rents quality and methodology information \(QMI\)](#) report.

Future developments

Following our request for a quality-focused assessment of the Private Index of Private Rents (PIPR), the Office for Statistics Regulation (OSR) published their [Spotlight on Quality Assessment: PIPR report](#) in October 2024.

We have been reported progress through our [Private rental prices development plan](#), with the last update published in May 2026. On 20 May 2026, we updated the status of PIPR from "official statistics in development" to "official statistics". We have engaged with the Office for Statistics Regulation (OSR) regarding next steps towards PIPR accreditation status. The next stage will be for the OSR to review our progress towards meeting the requirements laid out in their October 2024 [Spotlight on Quality Assessment: PIPR report](#).
