1 . Main points

- The Consumer Prices Index including owner occupiers' housing costs (CPIH) rose by 3.7% in the 12 months to October 2026, up from 3.6% the previous month.
- On a monthly basis, CPIH rose by 0.5% in October 2026, compared with a rise of 0.4% in October 2025.
- The Consumer Prices Index (CPI) rose by 3.6% in the 12 months to October 2026, up from 3.5% the previous month.
- On a monthly basis, CPI rose by 0.5% in October 2026, compared with a rise of 0.4% in October 2025.
- Transport, particularly motor fuels, made the largest upward contribution to the monthly change in both CPIH and CPI annual rates; restaurants and hotels made the largest, partially offsetting, downward contribution.
- Core CPIH (CPIH excluding energy, food, alcohol, and tobacco) rose by 3.1% in the 12 months to October 2026, little changed from September; the CPIH goods annual rate rose from 3.2% to 3.5%, while the CPIH services annual rate was 3.9%, little changed from September.
- Core CPI (CPI excluding energy, food, alcohol, and tobacco) rose by 2.8% in the 12 months to October 2026, little changed from September; the CPI goods annual rate rose from 3.2% to 3.5%, while the CPI services annual rate was 3.7%, little changed from September.

2 . Consumer price inflation rates

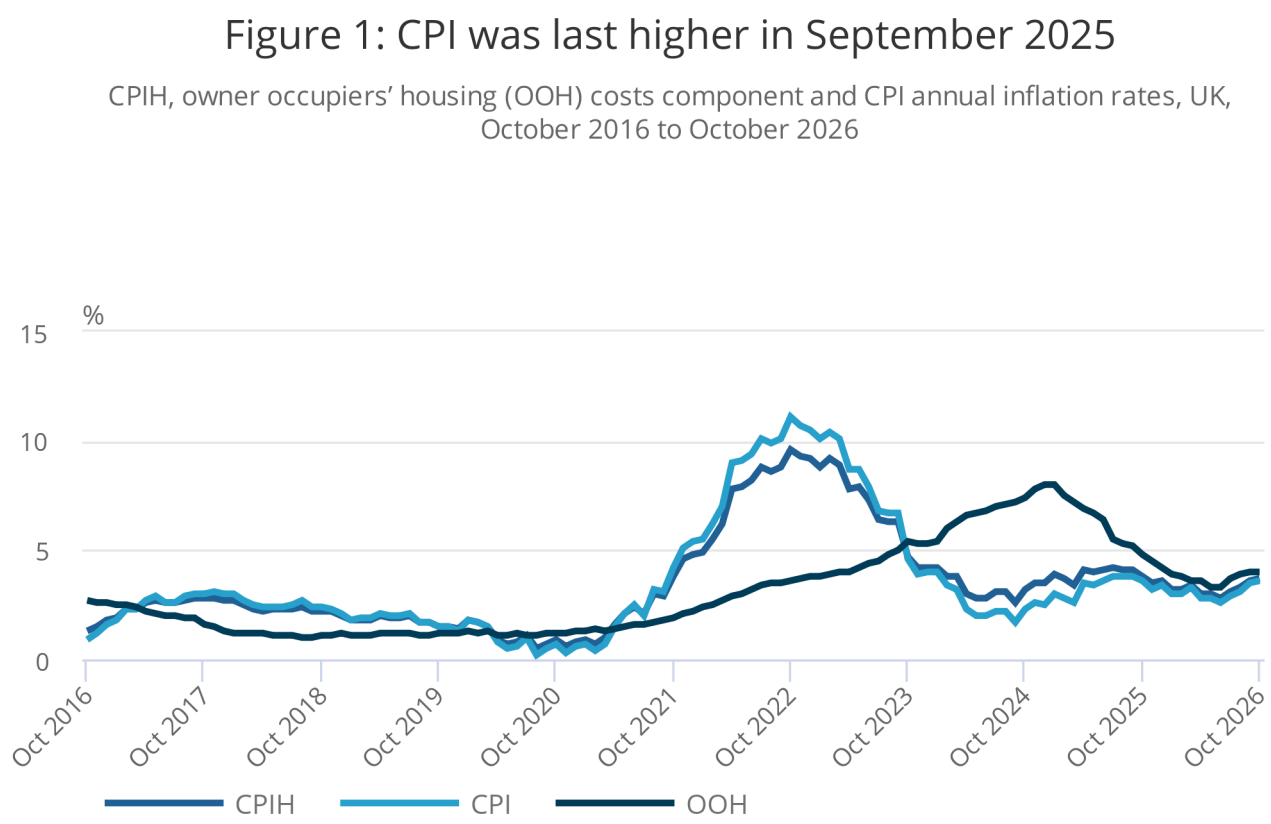

Table 1: CPIH, OOH component and CPI index values, and annual and monthly rates
UK, October 2025 to October 2026

	CPIH Index (UK, 2015 = 100)	CPIH 12-month rate (%)	CPIH 1-month rate (%)	CPI Index (UK, 2015=100)	CPI 12-month rate (%)	CPI 1-month rate (%)	OOH Index (UK, 2015=100)	OOH 12-month rate (%)

Figure 1: CPI was last higher in September 2025

CPIH, owner occupiers' housing (OOH) costs component and CPI annual inflation rates, UK, October 2016 to October 2026

Source: Consumer price inflation from the Office for National Statistics

The Consumer Prices Index including owner occupiers' housing costs (CPIH) rose by 3.7% in the 12 months to October 2026, up from 3.6% the previous month (Figure 1).

On a monthly basis, CPIH rose by 0.5% in October 2026, compared with a rise of 0.4% in October 2025.

The Consumer Prices Index (CPI) rose by 3.6% in the 12 months to October 2026, up from 3.5% the previous month.

On a monthly basis, CPI rose by 0.5% in October 2026, compared with a rise of 0.4% in October 2025.

The main drivers of the annual inflation rate for CPIH and CPI are the same where they are common to both measures. However, the owner occupiers' housing (OOH) costs component accounts for approximately 18% of the CPIH and is the main driver for differences between the CPIH and CPI inflation rates.

This makes CPIH our most comprehensive measure of inflation. We cover this in more detail in Section 4: Latest movements in CPIH inflation and provide a commentary on the CPI in Section 5: Latest movements in CPI inflation. We also cover both CPIH and CPI in Section 3: Notable movements in prices, though the figures reflect CPIH.

3 . Notable movements in prices

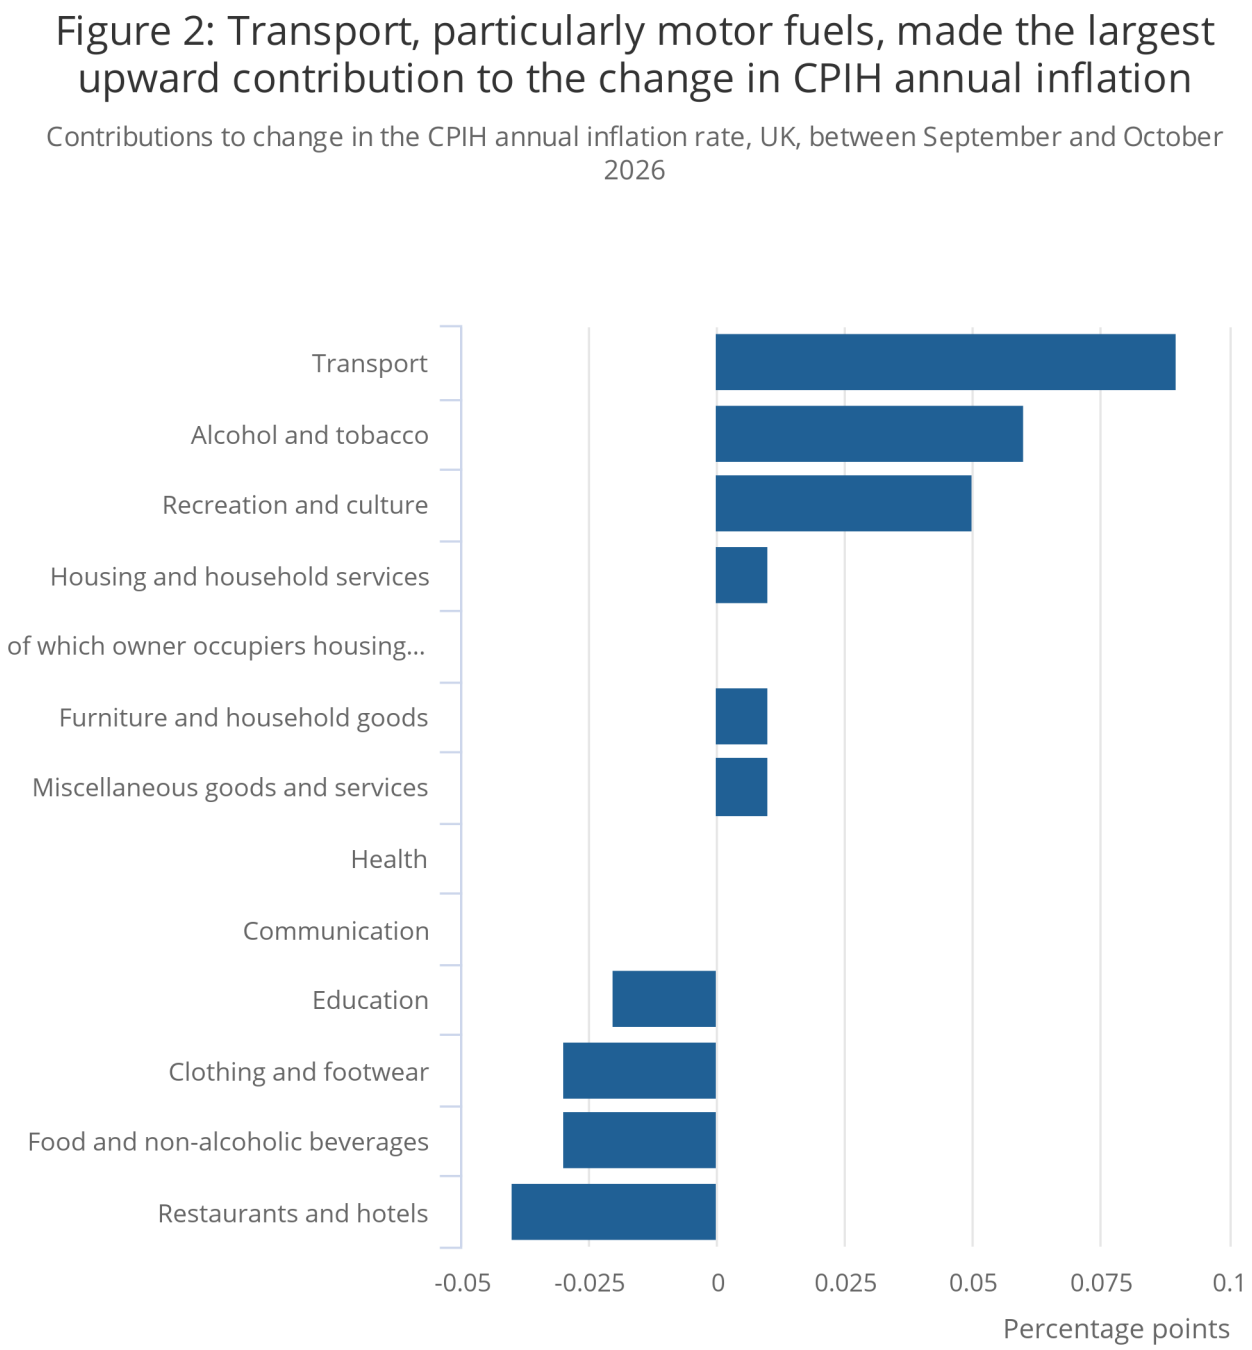

Table 2: CPIH annual and monthly inflation rates by division
UK, October 2025, September 2026, and October 2026

	September 2026	October 2026	October 2025	October 2026
CPIH All items	3.6	3.7	0.4	0.5
Food and non-alcoholic beverages	1.3	0.9	0.5	0.2
Alcohol and tobacco	2.5	4.5	0.3	2.2

Source: Consumer price inflation from the Office for National Statistics

Figure 2: Transport, particularly motor fuels, made the largest upward contribution to the change in CPIH annual inflation

Contributions to change in the CPIH annual inflation rate, UK, between September and October 2026

Source: Consumer price inflation from the Office for National Statistics

Notes:

1. Individual contributions may not sum to the total because of rounding.
2. More information on the contents of each division can be found in Table 3 of our Consumer price inflation dataset.

Figure 2 shows the contributions from the 12 divisions to the change in the annual Consumer Prices Index including owner occupiers' housing costs (CPIH) inflation rate between September and October 2026. These sum to the change in the annual rate, from 3.6% to 3.7%, between these months.

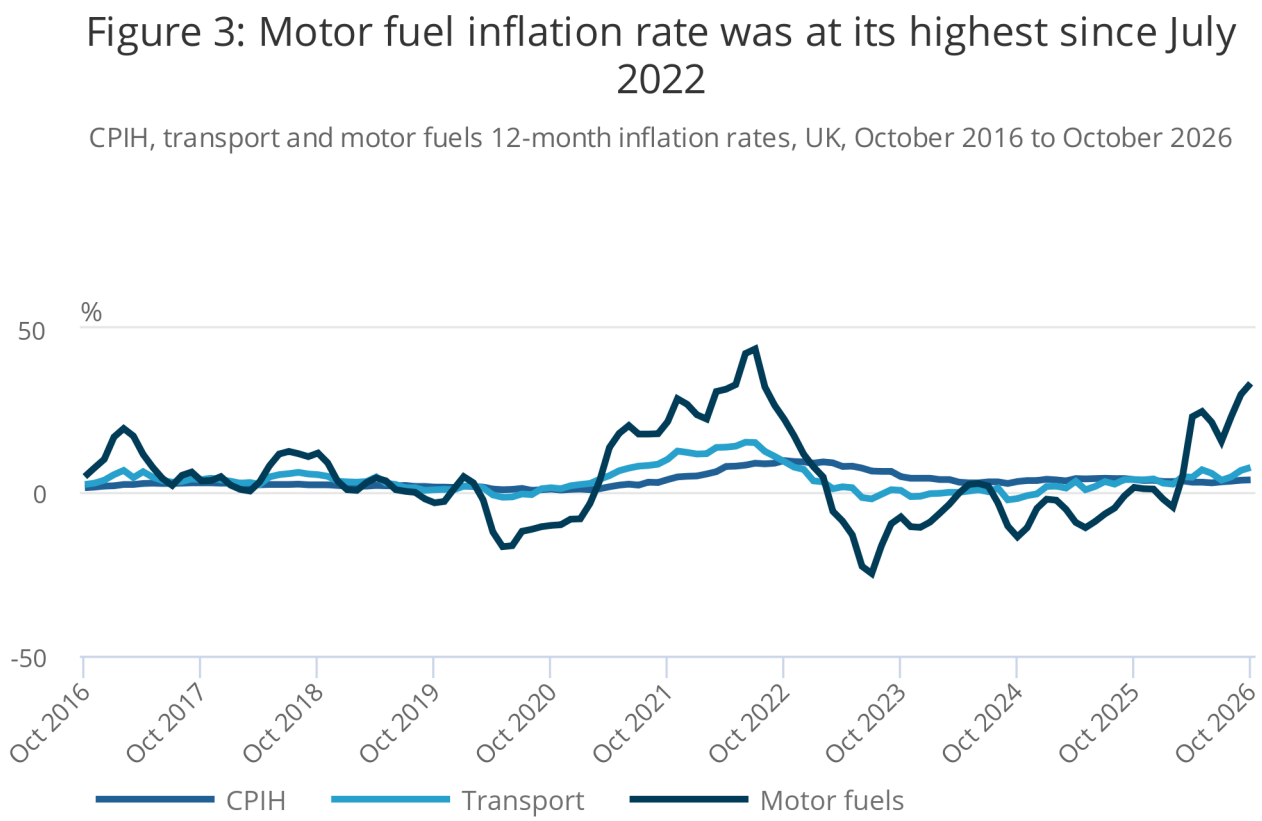

The increase in the 12-month rate between September and October 2026 reflected upward contributions from six divisions, partially offset by downward contributions from four divisions. The largest upward contribution came from transport, particularly motor fuels. The largest offsetting downward contribution came from restaurants and hotels.

Transport

Prices in the transport division rose overall by 7.5% in the 12 months to October 2026, up from 6.6% the previous month (Figure 3). On a monthly basis, prices rose by 0.8% in October 2026, compared with being little changed a year ago.

Figure 3: Motor fuel inflation rate was at its highest since July 2022

CPIH, transport and motor fuels 12-month inflation rates, UK, October 2016 to October 2026

Source: Consumer price inflation from the Office for National Statistics

The largest upward effect contributing to the rise in the transport annual rate came from motor fuels.

The average price of petrol rose by 5.2 pence per litre between September and October 2026, compared with a rise of 0.7 pence per litre between September and October 2025. The average price stood at 174.7 pence per litre in October 2026. This is the highest price recorded since August 2022.

Diesel prices rose by 7.0 pence per litre in October 2026, compared with a rise of 1.2 pence per litre in October 2025. The average price stood at 199.5 pence per litre in October 2026. This is the highest price recorded since our records began in January 1996.

These movements resulted in overall motor fuel prices rising by 33.2% in the 12 months to October 2026, compared with a rise of 29.8% the previous month. This is the largest annual rise since July 2022.

Within transport, there were smaller upward effects from roadside recovery and rail, and a partially offsetting downward effect from the purchase of vehicles.

Air fares rose by 1.8% between September and October 2026, compared with a rise of 1.7% between September and October 2025. While there was an upward effect from long-haul flights, there was a counteracting downward effect from European flights.

Alcohol and tobacco

Prices in the alcohol and tobacco division rose by 4.5% in the 12 months to October 2026, up from 2.5% in the 12 months to September. On a monthly basis, prices rose by 2.2% in October 2026, compared with a rise of 0.3% a year ago.

The rise in the 12-month rate reflected an upward effect from tobacco, where prices rose by 5.2% between September and October 2026, compared with a fall of 0.1% a year ago. The rise was possibly influenced by the timing of an increase in tobacco duty, which took effect on 1 October 2026. Duty rates on tobacco did not increase in 2025 until 26 November.

Recreation and culture

Recreation and culture prices rose by 0.5% in the month to October 2026, compared with a rise of 0.1% a year ago. This led to a 12-month rate of 2.7% in October 2026, up from 2.3% in September.

There were small upward contributions from action cameras, laptops, DVDs bought online, water sports equipment, cat food, computer software, non-fiction paperbacks, and package holidays. There were downward contributions from DVDs purchased in-store, Blu-rays bought online, CD albums, boats, computer games bought online, and live music.

Restaurants and hotels

Prices in the restaurants and hotels division rose by 3.4% in the 12 months to October 2026, down from 3.8% in the 12 months to September 2026. On a monthly basis, prices fell by 0.4% in October 2026, compared with being little changed a year ago.

The downward contribution mainly came from restaurants and cafes where prices rose by 0.3% compared with a rise of 0.6% a year ago. There was a smaller downward contribution from hotels where prices fell by 3.8% compared with a fall of 3.4% a year ago.

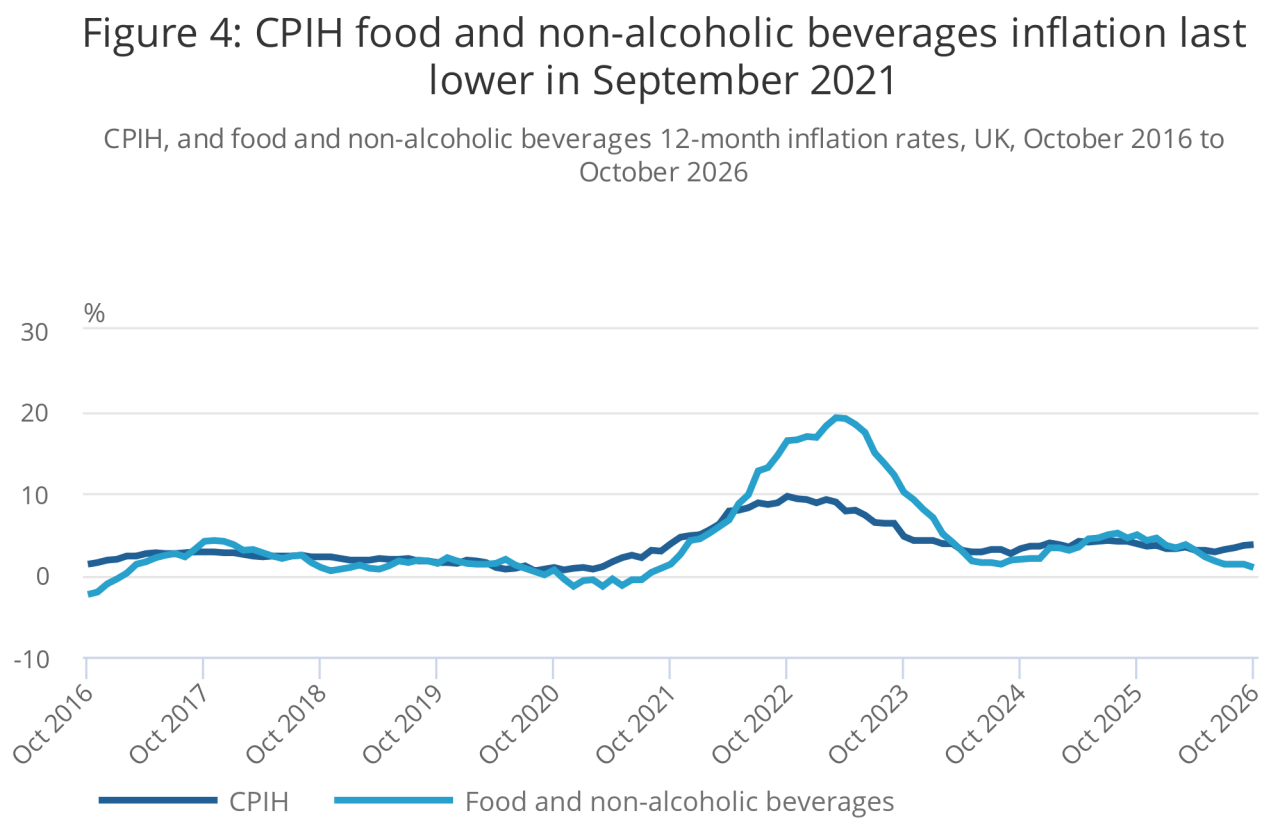

Food and non-alcoholic beverages

The 12-month inflation rate for food and non-alcoholic beverages was 0.9% in October 2026, down from 1.3% in September (Figure 4). The rate was last lower in September 2021, when it was 0.8%. On a monthly basis, food and non-alcoholic beverage prices rose by 0.2% in October 2026, down from 0.5% in October 2025.

The 12-month inflation rate for food was 0.8% in October 2026, down from 1.2% in September. On a monthly basis, food prices rose by 0.2% in October 2026, down from 0.5% in October 2025.

Figure 4: CPIH food and non-alcoholic beverages inflation last lower in September 2021

CPIH, and food and non-alcoholic beverages 12-month inflation rates, UK, October 2016 to October 2026

Source: Consumer price inflation from the Office for National Statistics

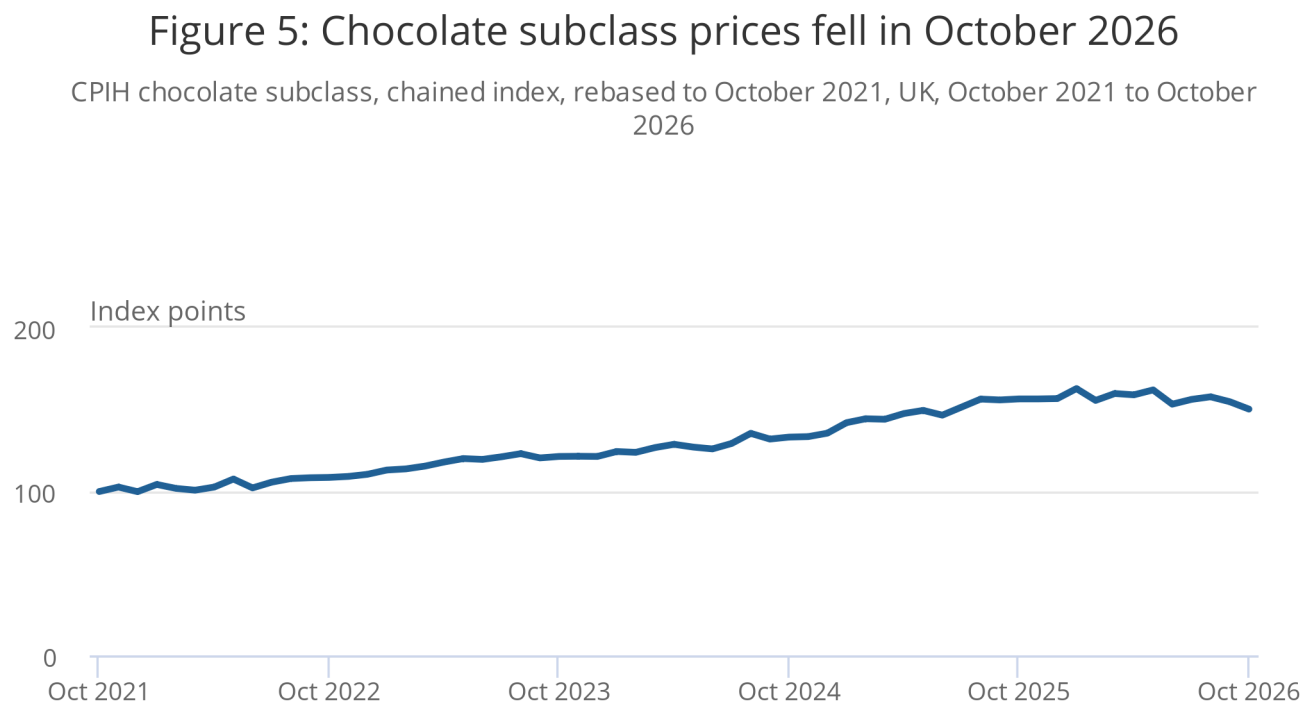

Prices fell by 2.9% in the chocolate subclass compared with a rise of 0.4% a year ago. Prices in this subclass have continued to increase since October 2021 (Figure 5), and part of the increase in 2024 may have been because of the "cocoa crisis". Cocoa prices are now much lower than they were in 2024, and this lower input cost may be one of the reasons for the fall in price of the chocolate subclass.

The fall in price may also be explained by the proportion of discounted prices in this subclass, which almost doubled from September to October 2026 compared with a small rise in discounted prices in the same period in 2025.

Although the chocolate sampled in the chocolate subclass consists of products that consist mainly of chocolate, there is also a chocolate category in the confectionery products subclass where the majority of the inputs are not chocolate. While the majority-chocolate consumption segments saw a fall in price of 2.9%, the minority-chocolate consumption segment saw a rise in price of 0.8%.

Figure 5: Chocolate subclass prices fell in October 2026

CPIH chocolate subclass, chained index, rebased to October 2021, UK, October 2021 to October 2026

Source: Consumer price inflation from the Office for National Statistics.

The other class with a downward effect was fish. The other nine detailed classes within food and non-alcoholic beverages had little effect on the change in the headline rate.

Housing and household services

The 12-month rate for housing and household services was 4.5% in October 2026, little changed from September. Prices rose by 0.5% in the month to October 2026, little changed from a year ago.

There was a change in the Office of Gas and Electricity Markets (Ofgem) energy price cap in October 2026. Ofgem estimated that, for an average household paying by direct debit for dual fuel using their previous Typical Domestic Consumption Values (TDCVs), this equates to an annual bill of £1,935, a rise of £73. This contributed to the 6.3% rise in gas prices, compared with a rise of 0.9% a year ago.

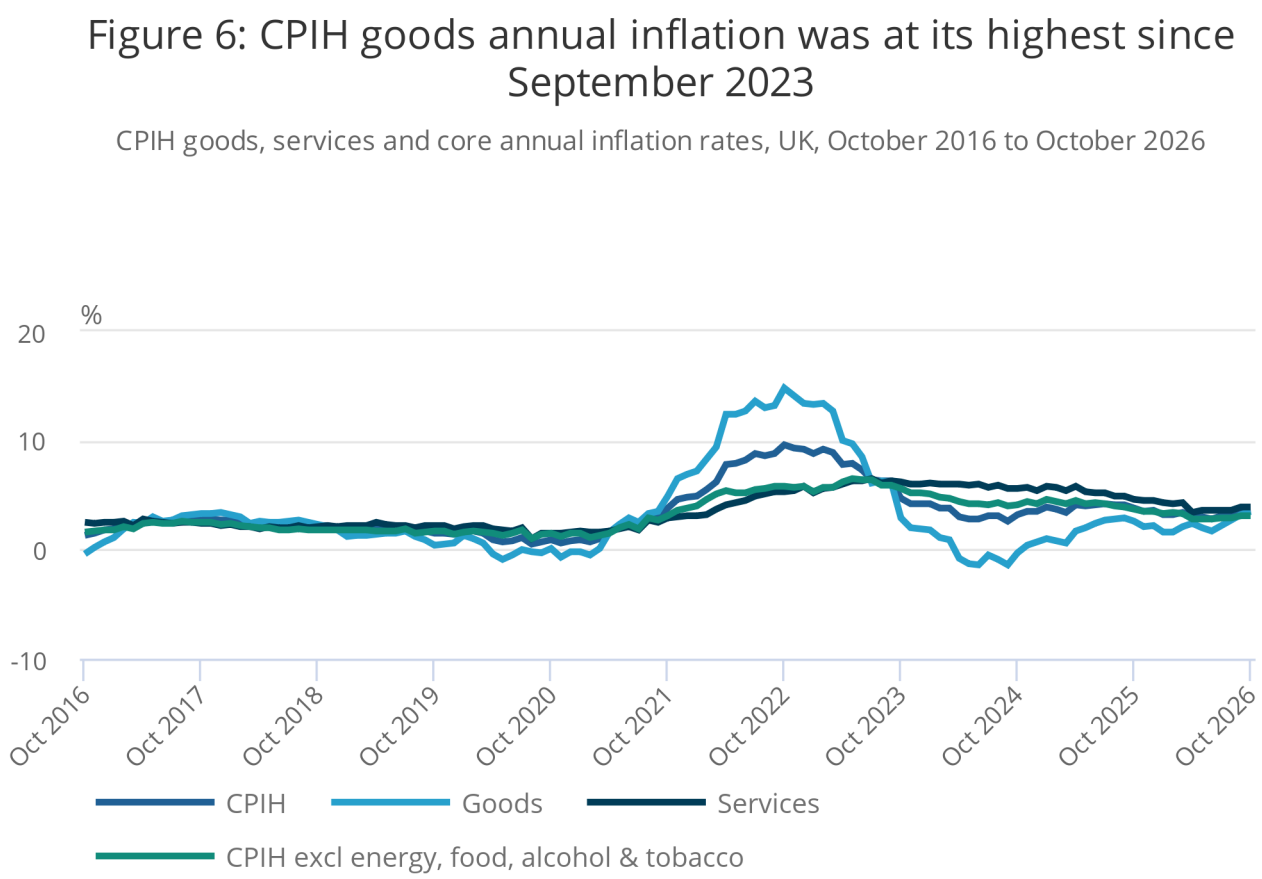

In contrast to gas prices, there was a downward effect from electricity, where prices fell by 0.8%, compared with a rise of 2.4% a year ago. The government's announcement that Value Added Tax (VAT) on electricity would be reduced from 5% to 0% from 1 October 2026 contributed to this downward effect.

Owner occupiers' housing (OOH) costs rose by 4.0% in the 12 months to October 2026, little changed from the previous month. On a monthly basis, OOH costs rose by 0.4% in October 2026, little changed from a year ago.

4 . Latest movements in CPIH inflation

Figure 6: CPIH goods annual inflation was at its highest since September 2023

CPIH goods, services and core annual inflation rates, UK, October 2016 to October 2026

Source: Consumer price inflation from the Office for National Statistics.

Figure 6 shows the 12-month inflation rates for the Consumer Prices Index including owner occupiers' housing costs (CPIH) series for all goods and all services, together with CPIH excluding energy, food, alcohol, and tobacco (often referred to as core CPIH). The CPIH inflation rate is added for comparison.

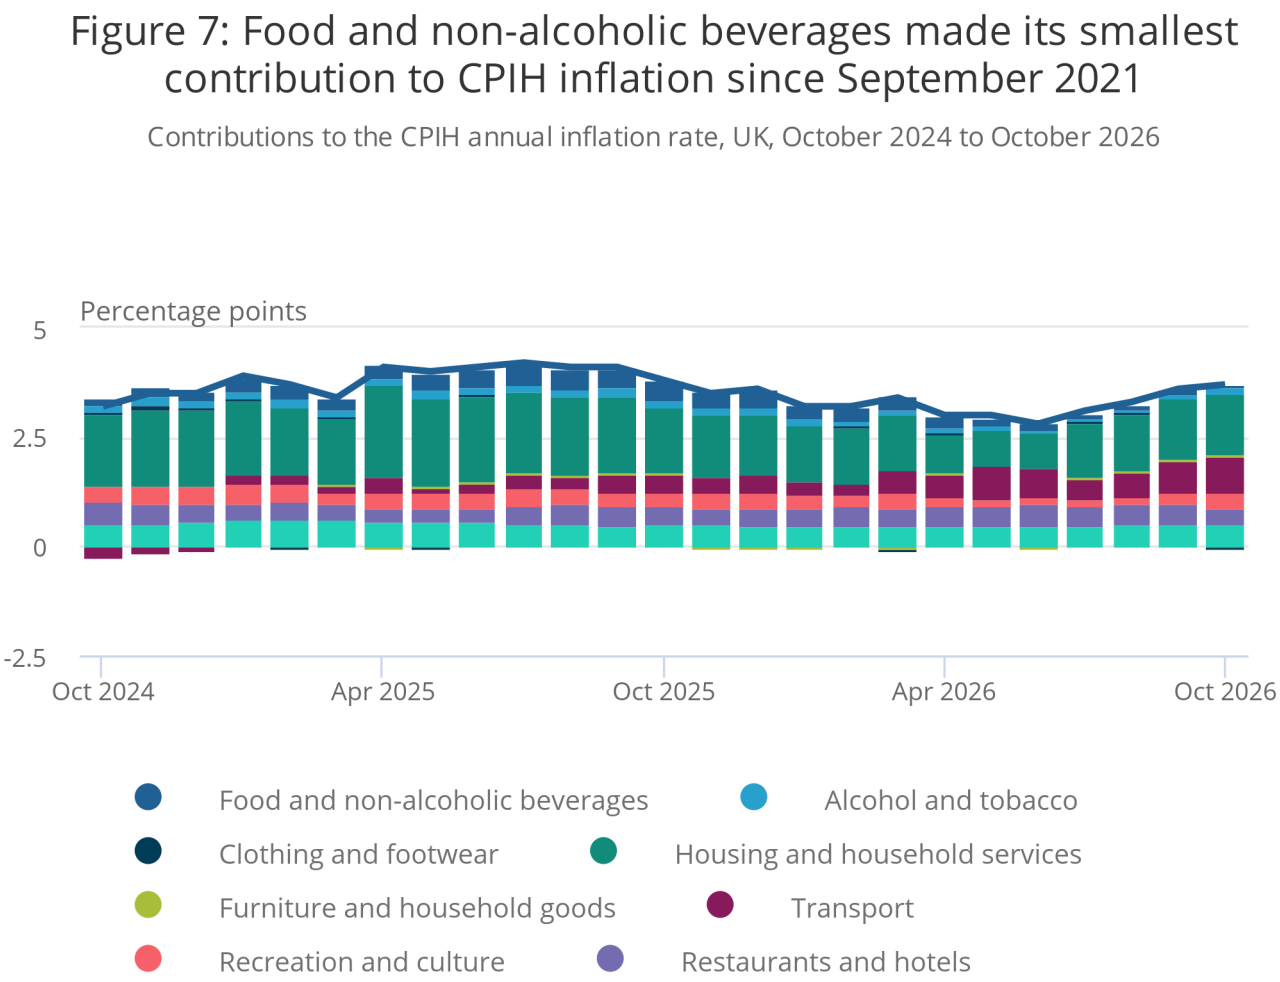

The core CPIH annual inflation rate was 3.1% in October 2026, little changed from September.

The CPIH all-goods index rose by 3.5% in the 12 months to October 2026, up from 3.2% the previous month. This was the highest rate since September 2023. The largest upward contribution to the change in the annual rate came from energy (particularly motor fuels) and tobacco.

The CPIH all-services index rose by 3.9% in the 12 months to October 2026, little changed from September.

Figure 7: Food and non-alcoholic beverages made its smallest contribution to CPIH inflation since September 2021

Contributions to the CPIH annual inflation rate, UK, October 2024 to October 2026

Source: Consumer price inflation from the Office for National Statistics

Notes:

1. Individual contributions may not sum to the total because of rounding.

2. More information on the contents of each division can be found in Table 3 of our Consumer price inflation dataset.

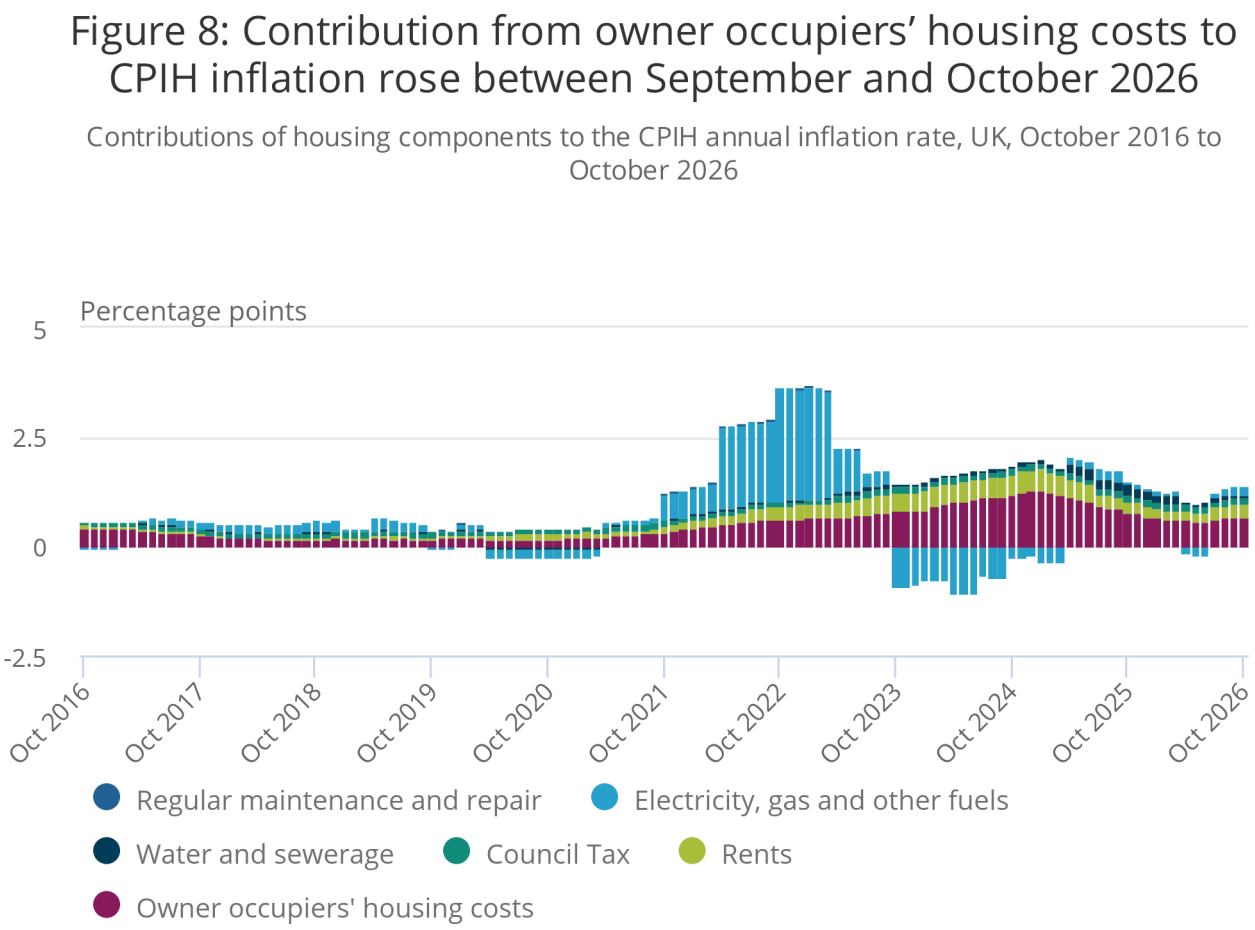

Figure 7 shows the extent to which the distinct categories of goods and services have contributed to the overall annual CPIH inflation rate over the last two years. The contribution of each category to the annual rate depends on the price movement in that category and its weight, which is updated annually.

The annual contribution from food and non-alcoholic beverages has broadly eased from a recent high of 0.46 percentage points in August 2025 to 0.08 percentage points in October 2026, the smallest since September 2021.

The largest positive contribution to the CPIH annual inflation rate came from housing and household services. The division has made the largest contribution for the last 28 months, starting from July 2024.

Figure 8: Contribution from owner occupiers' housing costs to CPIH inflation rose between September and October 2026

Contributions of housing components to the CPIH annual inflation rate, UK, October 2016 to October 2026

Source: Consumer price inflation from the Office for National Statistics

Notes:

1. Individual contributions may not sum to the total because of rounding.

Figure 8 shows the contributions from owner occupiers' housing (OOH) costs and Council Tax to the annual CPIH inflation rate in the context of wider housing-related costs. The Consumer Prices Index (CPI) differs from the CPIH because it does not include these two components.

The annual contribution from OOH costs rose to 0.71 percentage points in October 2026. This was the fifth consecutive rise between months and followed 16 consecutive decreases. Although the current contribution was larger than the previous month's, it was smaller than the recent high of 1.31 percentage points in January 2025.

The contribution from electricity, gas and other fuels remained at 0.19 percentage points in October 2026. The contribution from this category was last larger in September 2025.

5 . Latest movements in CPI inflation

While the Consumer Prices Index including owner occupiers' housing costs (CPIH) is our most comprehensive measure of consumer price inflation, the Consumer Prices Index (CPI) is based on a harmonised methodology developed by Eurostat, which enables international comparisons to be drawn.

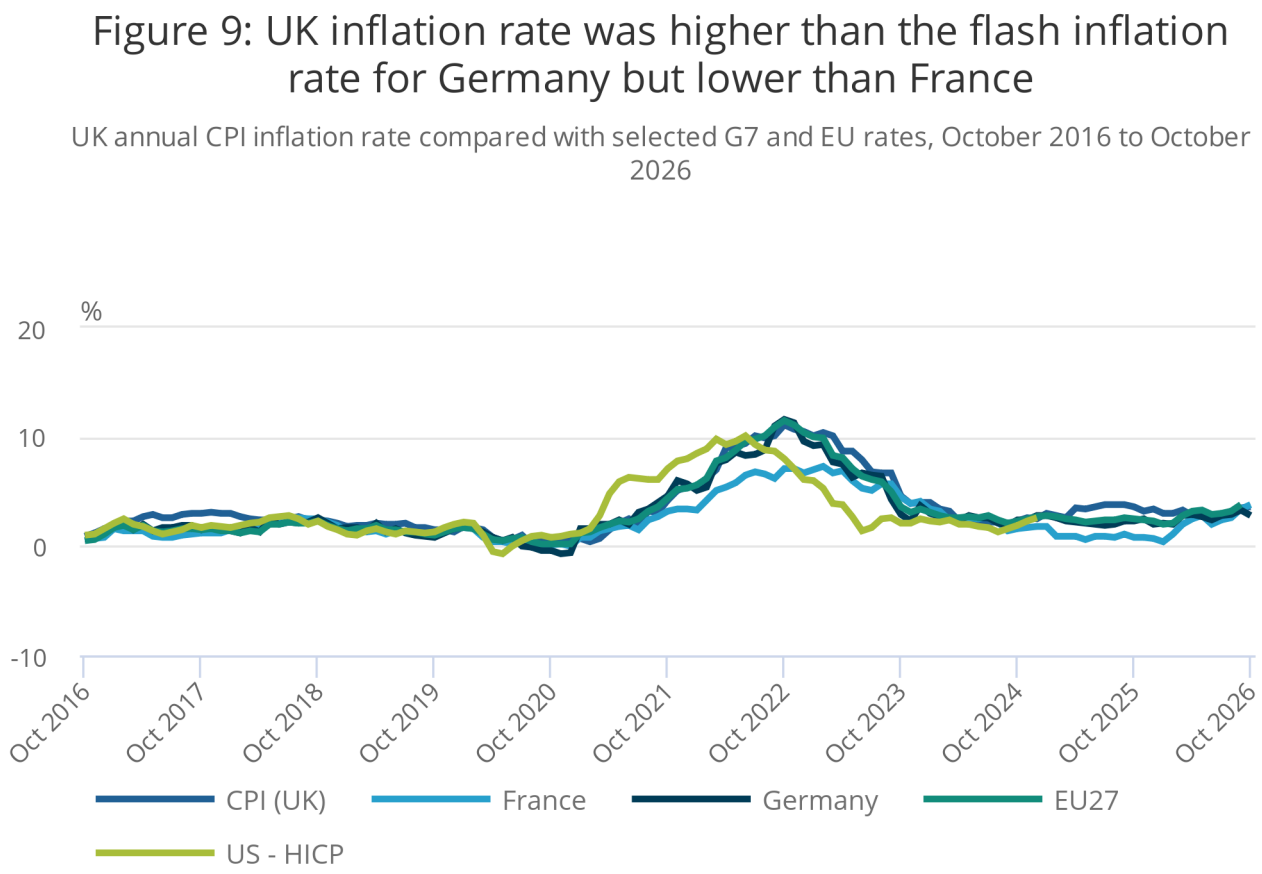

It is also used to set the operational inflation target for UK monetary policy, and to uprate working-age benefits and tax credits. More information on the use cases for our consumer price inflation statistics can be found in our Measuring changing prices and costs for consumers and households: December 2023 article.

Figure 9 shows annual CPI inflation for the UK compared with the EU average and selected G7 countries. While the UK CPI is produced on a comparable basis with EU countries, the US Harmonised Index of Consumer Prices (HICP) differs in some respects. More information is available in Note 1 of Figure 9.

The UK's CPI inflation rate of 3.6% was lower than the flash inflation rate of France (3.8%) but higher than the flash inflation rate of Germany (2.8%) in October 2026.

Figure 9: UK inflation rate was higher than the flash inflation rate for Germany but lower than France

UK annual CPI inflation rate compared with selected G7 and EU rates, October 2016 to October 2026

Source: Consumer price inflation from the Office for National Statistics, Eurostat, and the US Bureau of Labor Statistics

Notes:

1. There are some differences in the definition of the US Harmonised Index of Consumer Prices (HICP) that may limit comparison. More information is available on the US Bureau of Labor Statistics R-HICP webpage. The latest available figure is for December 2024.

2. October 2026 data for France and Germany are flash estimates and are not final; the final HICP dataset, including the EU27 aggregate, for October 2026 is published on 18 October 2026. The latest Euro area inflation estimates can be found in theEurostat Data Browser.

3. The international data in this figure are sometimes revised.

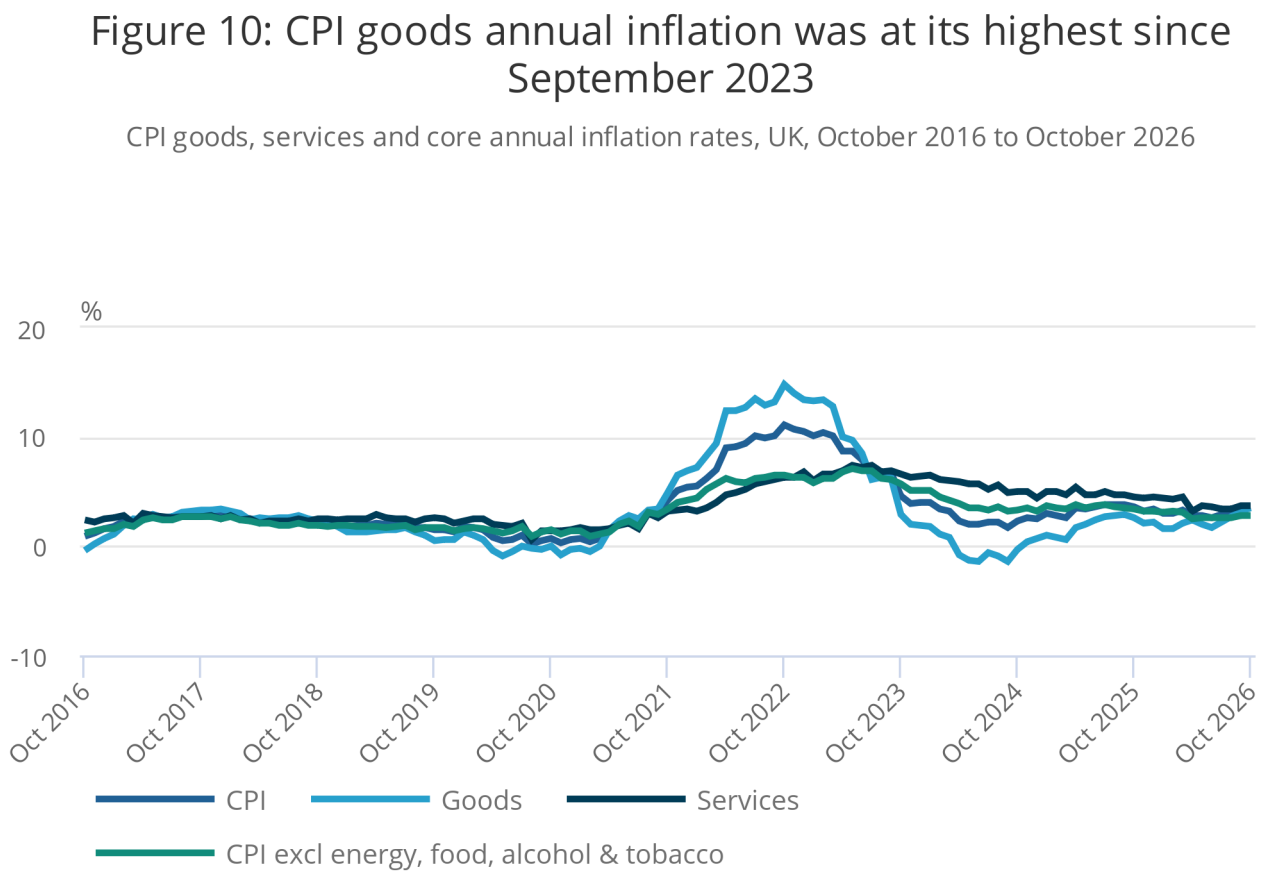

Table 3: CPI annual and monthly inflation rates by division
UK, October 2025, September 2026, and October 2026

	CPI 12-month rate (%)		CPI 1-month rate (%)	
	September 2026	**October 2026**	**October 2025**	**October 2026**
CPI All items	3.5	3.6	0.4	0.5
Food and non-alcoholic beverages	1.3	0.9	0.5	0.2
Alcohol and tobacco	2.5	4.5	0.3	2.2
Clothing and footwear	0.1	-0.5	1.0	0.4
Housing and household services	5.3	5.3	0.7	0.7
Furniture and household goods	1.0	1.1	0.4	0.6
Health	3.5	3.6	-0.2	-0.1
Transport	6.6	7.5	0.0	0.8
Communication	5.8	5.8	-0.2	-0.2
Recreation and culture	2.3	2.7	0.1	0.5
Education	5.0	3.9	3.6	2.5
Restaurants and hotels	3.8	3.4	0.0	-0.4
Miscellaneous goods and services	3.1	3.2	0.2	0.3
All goods	3.2	3.5	0.5	0.8
All services	3.7	3.7	0.2	0.2
CPI exc food, energy, alcohol and tobacco (core CPI)	2.8	2.8	0.3	0.3

Source: Consumer price inflation from the Office for National Statistics

Figure 10: CPI goods annual inflation was at its highest since September 2023

CPI goods, services and core annual inflation rates, UK, October 2016 to October 2026

Source: Consumer price inflation from the Office for National Statistics

Figure 10 shows the 12-month inflation rates for the CPI all-goods and all-services series, together with CPI excluding energy, food, alcohol, and tobacco (often referred to as core CPI). The headline CPI inflation rate is added for comparison.

The core CPI annual inflation rate was 2.8% in October 2026, little changed from September 2026.

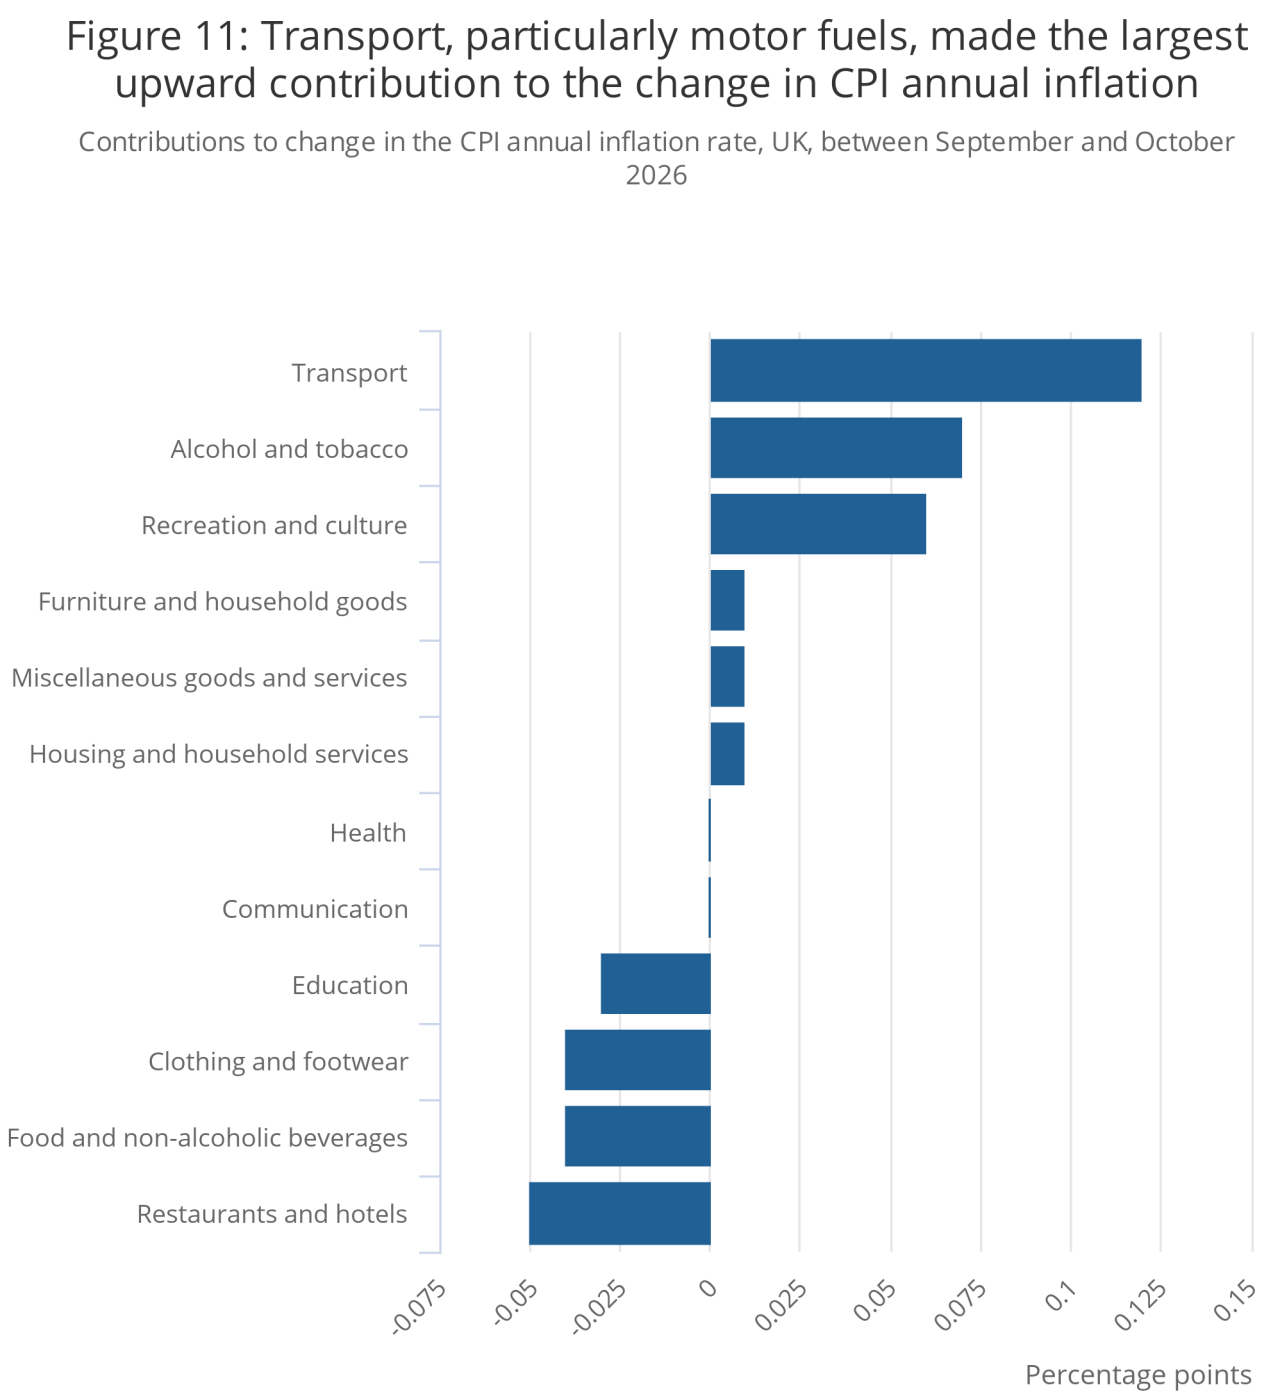

The CPI all-goods index rose by 3.5% in the 12 months to October 2026, up from 3.2% the previous month. The rate in October 2026 was the highest since September 2023.

The CPI all-services index rose by 3.7% in the 12 months to October 2026, little changed from September 2026.

As with the all-items annual inflation rates, the drivers of CPIH and CPI goods and services inflation are the same (except for owner occupiers' housing (OOH) costs and Council Tax, which are excluded from CPI). The drivers are discussed in more detail in Section 4: Latest movements in CPIH inflation.

Figure 11: Transport, particularly motor fuels, made the largest upward contribution to the change in CPI annual inflation

Contributions to change in the CPI annual inflation rate, UK, between September and October 2026

Source: Consumer price inflation from the Office for National Statistics

Notes:

1. Individual contributions may not sum to the total because of rounding.
2. More information on the contents of each division can be found in Table 4 of our Consumer price inflation dataset.

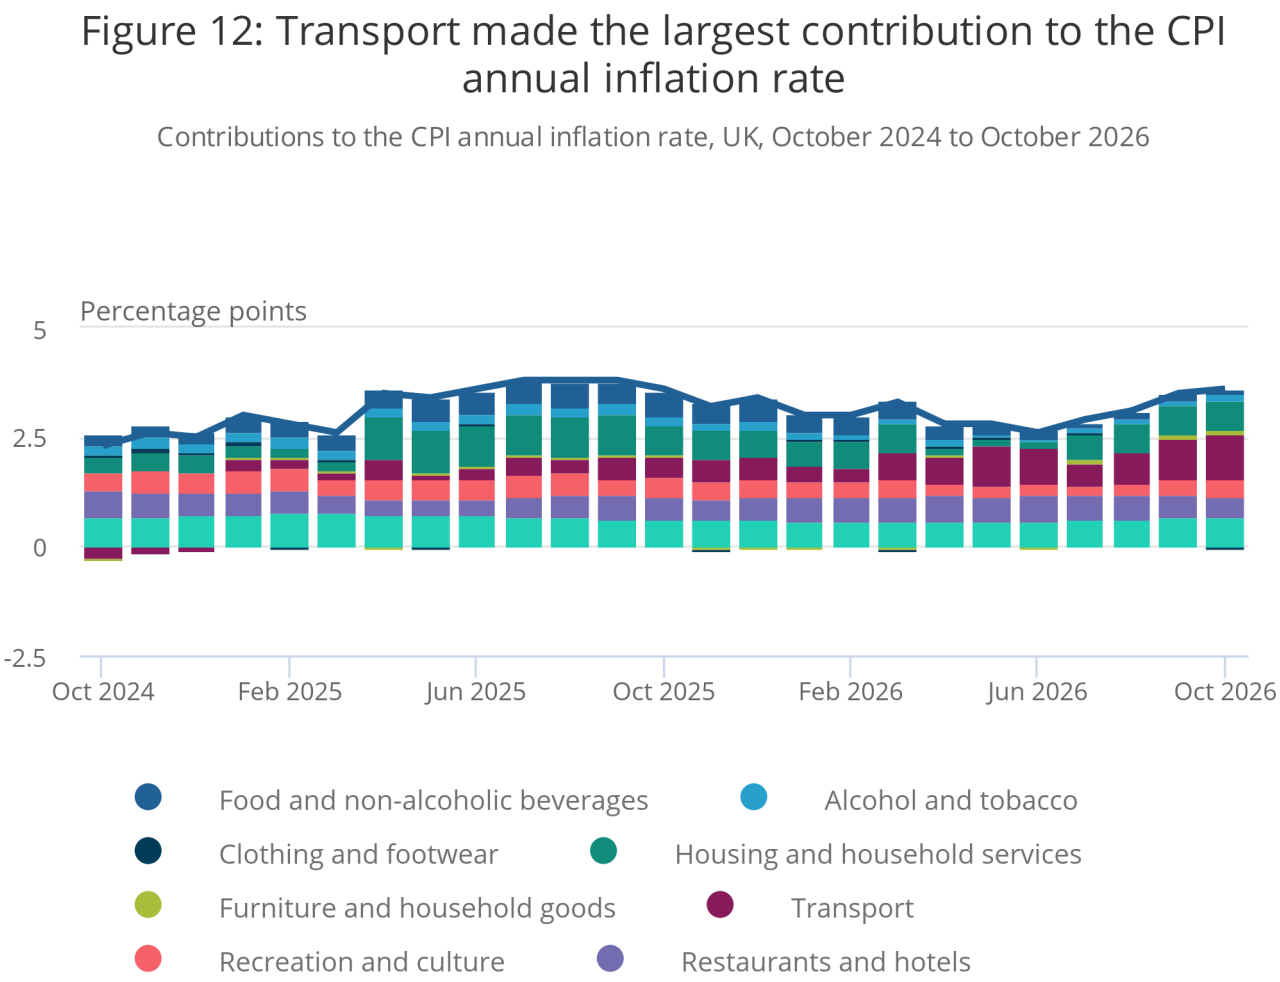

Figure 11 shows how each of the main groups of goods and services contributed to the change in the CPI annual inflation rate between September and October 2026.

The rate's rise in October 2026 reflected upward contributions from six divisions, partially offset by downward contributions from four divisions. The largest upward contribution came from transport, particularly motor fuels. The largest offsetting downward contribution came from restaurants and hotels.

Though the sizes of the contributions differ from CPIH, the main drivers to the change are the same where they are common to both measures.

Figure 12: Transport made the largest contribution to the CPI annual inflation rate

Contributions to the CPI annual inflation rate, UK, October 2024 to October 2026

Source: Consumer price inflation from the Office for National Statistics

Notes:

1. Individual contributions may not sum to the total because of rounding.

2. More information on the contents of each division can be found in Table 4 of our Consumer price inflation dataset.

Figure 12 shows the extent to which the distinct categories of goods and services have contributed to the overall annual CPI inflation rate over the last two years.

The CPIH includes extra housing components not included in the CPI. This can sometimes result in the largest contributions to the annual CPI and CPIH inflation rates coming from different divisions. In October 2026, the largest contributing division to CPI was transport (1.06 percentage point contribution to the CPI rate), while the largest contributing division to CPIH was housing and household services (1.40 percentage point contribution to the CPIH rate). OOH costs made a large upward contribution to housing and household services in CPIH, but these are excluded from CPI.

6 . Data on consumer price inflation

Consumer price inflation tables
Dataset | Released 18 November 2026
Measures of monthly UK inflation data including the Consumer Prices Index including owner occupiers' housing costs (CPIH), Consumer Prices Index (CPI) and Retail Prices Index (RPI). These tables complement the consumer price inflation time series dataset.

Consumer price inflation time series
Dataset MM23 | Released 18 November 2026
Comprehensive database of time series covering measures of inflation data for the UK including CPIH, CPI and RPI.

Consumer price inflation detailed briefing note
Dataset | Released 18 November 2026
The consumer price inflation detailed briefing note contains details of the items contributing to the changes in the CPIH, details of any notable movements, a summary of the reconciliation of CPIH and RPI, and the outlook, which looks ahead to next month's release.

Consumer price inflation consumption segment indices and price quotes
Dataset | Released 18 November 2026
Price quote data (for locally collected data only) and consumption segment indices (that underpin consumer price inflation statistics), giving users access to the detailed data that are used in the construction of the UK's inflation figures. From publication in March 2026, this dataset no longer includes price quote data for food and non-alcoholic beverages, and alcohol and tobacco. More information is included in Section 8: Data sources and quality.

Contributions to the 12-month rate of CPI(H) by import intensity
Dataset | Released 18 November 2026
A time series of the contributions to the CPIH and CPI annual rates broken down by the import intensity of household purchases.

Consumer price inflation, historical data, UK, 1950 to 1988
Dataset | Released 18 May 2022
Data tables of historical estimates modelled for the CPIH and CPI over the period 1950 to 1988. Data in these tables are not accredited official statistics and are provided for indicative purposes only.

7 . Glossary

Annual inflation rate

The most common approach to measuring inflation is the 12-month or annual inflation rate, which compares prices for the latest month with the same month a year ago. In any given month, the annual rate is determined by the balance between upward and downward price movements across the range of goods and services included in the index.

Consumer price inflation

Consumer price inflation is the rate at which the prices of goods and services bought by households rise or fall. It is estimated by using price indices. An overview of the range of indices available and their uses, is available in our Consumer price indices, a brief guide: 2026 and our Measuring changing prices and costs for consumers and households: December 2023 article.

CPIH

The Consumer Prices Index including owner occupiers' housing costs (CPIH) is the most comprehensive measure of inflation. It extends the Consumer Prices Index (CPI) to include a measure of the costs associated with owning, maintaining and living in one's own home, known as owner occupiers' housing (OOH) costs, along with Council Tax. Both are substantial expenses for many households and are not included in the CPI.

CPI

The CPI is a measure of consumer price inflation produced to international standards and is based on European regulations for the Harmonised Index of Consumer Prices (HICP). The CPI is the inflation measure used in the government's target for inflation.

The CPI is produced at the same level of detail as the CPIH in our accompanying Consumer price inflation dataset and our Consumer price inflation time series dataset.

Owner occupiers' housing costs

OOH costs are the costs of housing services associated with owning, maintaining and living in one's own home.

RPI

The Retail Prices Index (RPI) and its subcomponents do not meet the required standard for designation as accredited official statistics. In recognition that the index continues to be widely used in contracts, we continue to publish the RPI, its subcomponents, and RPI excluding mortgage interest payments (RPIX).

To view the all-items RPI, please see our Inflation and price indices web page, specifically the data time series section. The annual RPI inflation rate was 4.2% in October 2026.

The UK Statistics Authority (the Authority) and HM Treasury launched a consultation in 2020 on the Authority's proposal to address the shortcomings of the RPI. From 2030 (at the earliest), as outlined in the Authority's Response to the joint consultation on reforming the methodology of the RPI, the CPIH methods and data sources will be introduced into the RPI. Additionally, the supplementary and lower-level indices of the RPI will be discontinued.

8 . Data sources and quality

Consultation on the consumer price inflation tables

We are proposing to refine the number of tables we publish each month in our Consumer price inflation tables dataset, and drop several tables that we believe are less frequently used or where there is a duplication of data that are available in other tables. This includes some tables containing Retail Prices Index (RPI) data. No underlying data would be removed. Data from these tables will continue to be available via our Consumer price inflation time series dataset, and in some cases, elsewhere in the remaining tables. We will commit to publishing a look-up table to direct users to the appropriate time series for reference and ongoing data access.

We would like to hear from you if you use the tables we are proposing to drop. If so, we would like to know how you use the data and whether you are familiar with accessing data through our time series function. The consultation can be accessed via our website and will close on 27 January 2027.

Publication of seasonally adjusted price indices

We continue to work towards publication of a seasonally adjusted Consumer Prices Index (CPI) and Consumer Prices Index including owner occupiers' housing costs (CPIH). We have completed the first iteration of build work and are now focusing on testing the outputs to fully assure the quality of the data prior to publication and ensuring that the aggregation method best meets user needs.

Introducing scanner data into consumer price inflation statistics

We introduced scanner data for approximately 50% of the grocery market with the index, published on 25 March 2026. Instead of collecting 25,000 prices per month directly from shops by price collectors, we are now using approximately 300 million price points derived from sales of over a billion units of products per month, collected directly from supermarket scanners at the checkouts or online. For the remaining 50% of the groceries market, we continue to manually collect prices in-store and online.

For comparison, we produced the all-items headline rates for February 2026 without using scanner data. Based on locally collected grocery data, the CPIH rose by 3.3% in the year to February 2026, and the CPI rose by 3.1%. These were slightly above the official rates of 3.2% and 3.0%, respectively.

You can find more about this change and how it affects our headline measures of inflation in our Impact analysis on transformation of UK consumer price statistics: January 2026 article.

We also published our Overview of how we use scanner data in consumer price inflation statistics: January 2026 article and our How multilateral index methods help us understand grocery scanner data methodology, which supports user understanding of how we use the data.

Following the Bank of England's response to the proposed changes to the RPI in 2026 (PDF, 140KB), required under the Statistics and Registration Service Act 2007, this change was included in the RPI released in March 2026. It was also incorporated into the Household Costs Indices (HCIs), published on 28 May 2026.

This followed some changes introduced with the February 2025 consumer price indices in March 2025, as a necessary step towards incorporating scanner data. At that point, the process for aggregating the detailed information changed. Goods and services were allocated into "consumption segments" for different categories of expenditure.

In some cases, we defined these consumption segments to correspond to one "item" for which we track prices over time. However, in cases where more comprehensive source data were going to become available, a consumption segment was set up to include much more than just one item.

There is more information on the use of consumption segments in our Introducing alternative data into consumer price statistics: aggregation and weights article. For simplicity, we continue to refer to "items" in our statistical bulletin and detailed briefing note.

Changes to published microdata

Despite the benefits of introducing scanner data into the consumer price indices, we can no longer publish the price quote data for food and non-alcoholic beverages, alcohol and tobacco (Divisions 1 and 2 of the CPIH and CPI), or the equivalent categories of RPI in our Consumer price inflation consumption segment indices and price quotes dataset. This is because of our data-sharing agreements with retailers.

Instead, we have developed new aggregate output statistics to meet the needs of users. We have improved the granularity and accuracy of our Shopping prices comparison tool. We now provide average prices for more specific product types, such as "Microwave rice" and "Basmati rice". Under the previous, broader definitions (such as "rice, in all forms"), we were unable to produce average prices. Units of measurement are also now included, making comparisons more meaningful and easier to interpret.

We are also publishing regional consumption segment indices and weights, and counts of indicator marker codes (for example, sales and recoveries) that are manually collected as part of the traditional data collection. We first published these from March 2026, with the release of the February 2026 indices. Further outputs will be introduced later in 2026.

More information on the new outputs is available in our Changes to the provision of microdata outputs for consumer price inflation statistics: January 2026 article.

Households and the cost of living

To assist individuals in understanding how the rise in inflation affects their expenditure, we have produced a personal inflation calculator. The calculator allows users to enter the amount they spend across either a reduced or a wide range of categories to produce an estimate of their personal inflation based on those spending patterns.

Our Shopping prices comparison tool shows how the average prices of items have changed over time. Please note that the newly introduced consumption segments for food, drink and tobacco will not have data before 2025 in the tool.

However, the historical average prices for food, drink and tobacco items, which were in the tool before the update in 2025, can be found in our Shopping prices comparison tool data download before the 2025 update.

The tool includes average prices for petrol and diesel. As a result of rounding in the calculations used to produce those series, the average prices may occasionally be slightly different from the petrol and diesel prices released in this statistical bulletin.

On 28 August 2026, we published our quarterly HCIs for UK household groups bulletin. The HCIs reflect how different types of households experience changing prices, and differ from CPIH and CPI. The CPIH and CPI are based on recognised economic principles and provide an aggregate measure of inflation for household spending in the UK.

The HCIs are official statistics in development and this quarterly bulletin included new estimates for April to June 2026. It was not possible for this September 2026 bulletin to update to 2026 weights in line with the standard methodology for consumer prices. This is because of delays in processing the underlying survey data and the need for further quality assurance. We will update the weights as soon as the data are available to use.

Passenger transport by air

A monthly index for passenger transport by air is included in our monthly Consumer price inflation tables dataset.

From March 2025, we also began publishing a set of subindices and weights on an annual basis. We updated our Domestic, European and long-haul airfares consumer prices sub-indices: January 2007 to February 2026 dataset on 25 March 2026 with data for March 2025 to February 2026, and a longer historical time series back to 2007.

From March 2026, we also started to release quarterly and annual average air fare prices, again on an annual basis. The analyses are released in the user requested data section of our website.

Classification of Individual Consumption According to Purpose

The Classification of Individual Consumption According to Purpose (COICOP) is the classification that underpins some of the main statistics that we produce. To reflect changes in household expenditure patterns since its inception in the late 1990s, COICOP was updated in 2018 (PDF, 1,286KB).

The UK currently uses the version of COICOP introduced in 1999, which was updated in 2017 to add additional detail at the subclass level.

However, we plan to have implemented the updated COICOP 2018 by 2029, as referenced in Annex B: Statistical themes, Section B4 of our Economic statistics plan and Section 5 of our Economic Statistics: progress update December 2025 report. We will also consider re-referencing the CPI as part of the move to the new classification and will provide users with full details of our plans, once finalised.

For further information, please email cpi@ons.gov.uk.

Weights for 2026 consumer price inflation statistics

In line with usual practice at the start of each year, the expenditure weights used in compiling the CPIH and CPI were calculated using updated spending information.

The first update of weights was implemented with the January indices. The second update was introduced, along with the usual basket update, with the February indices released in March. We published our Consumer price inflation, updating weights: 2026 article and our Consumer price inflation basket of goods and services: 2026 article on 16 March 2026.

The 2026 weights for CPIH and CPI were calculated using national accounts household final consumption expenditure (HHFCE) data for 2024. They reflect our most comprehensive and complete estimate of the latest household spending at the time of the weights update. This is in line with our standard methodology. More information is available in our Consumer price inflation, updating weights articles.

The weights for the RPI were also updated and introduced with the February 2026 index.

Consumer price inflation historical estimates, UK, 1950 to 1988

On 18 May 2022, we published our Consumer price inflation, historical estimates, UK, 1950 to 1988 – methodology and our Consumer price inflation, historical estimates and recent trends, UK: 1950 to 2022 article.

These include new estimates of CPIH and improved estimates of CPI for 1950 to 1988. These estimates (published in response to user need for a longer series) are indicative and are for analytical purposes only. They are not intended for official use and do not constitute part of the accredited official statistics series.

Previously, in December 2018, we published our CPIH historical series: 1988 to 2004 article. These series are also not classed as accredited official statistics, reflecting the historical uncertainty around the backcasts.

Methodology information

The consumer price indices are based on prices collected manually from outlets around the country, information collected centrally over the internet and by phone, and, from February 2026, data collected from supermarket scanners at the checkouts or online. The traditionally sourced data used in this release were collected on or around 13 October 2026.

An overview of consumer price statistics is given in our Consumer price indices, a brief guide: 2026. The concepts and methodologies underpinning the indices in more detail are covered in our Consumer prices indices technical guidance.

Information on the users and uses of these statistics, and the characteristics of the different measures of inflation related to potential use, is included in our Users and uses of consumer price inflation statistics: July 2018 update methodology.

Strengths and limitations

In our Measuring changing prices and costs for consumers and households: December 2023 article, we illustrated our approach to the process using three use cases and described how they relate to the measures published and under development.

The three cases refer firstly to the CPIH as our lead measure of inflation, based on economic principles. They also refer to the HCIs as a set of measures that reflect the change in costs and prices experienced by different households, and the RPI as a legacy measure that is required to meet existing user needs. The issues with the RPI are described in our Shortcomings of the RPI as a measure of inflation article.

Accredited official statistics

These accredited official statistics were independently reviewed by the Office for Statistics Regulation in July 2017. They comply with the standards of trustworthiness, quality and value in the Code of Practice for Statistics and should be labelled “accredited official statistics”.

Revisions and correction of errors policies for consumer price inflation statistics

Our Revisions and correction of errors policies for consumer price inflation statistics are stated separately to highlight the differences between them. Within each policy, there is information on how the policy is applied, in what circumstances users will be notified, and how users will be notified. This policy replaces our previous Revisions policy for consumer price inflation statistics, published in March 2017.

Key: - zero or negligible

1 From the release of January consumer price inflation data on 16 February 2016, CPIH and CPI indices have been re-referenced and published with 2015=100. Full historic series for each of the re-referenced indices are available for users to view or download. Regular re-referencing of indices is methodological good practice as it avoids rounding issues that can arise from small index values. Please note that re-referencing does not impact on published inflation rates, although when using the indices to calculate inflation rates, it is important to use indices that are referenced on the same year. Re-referencing does not impact on RPI. For more information, please contact cpi@ons.gsi.gov.uk.

2 The Retail Prices Index and its derivatives do not meet the required standards for designation as National Statistics. A full report can be found at http://www.statisticsauthority.gov.uk/.

3 The series CPIY, CPI-CT and CPIHY were discontinued in January 2022, with the final estimates referring to price change in the period December 2021.

B CPI: Detailed figures for 13 October 2026 [1]

	Index (2015 =100)	Percentage change over 1 mth	Percentage change over 12 mths

1 As a direct result of the reduced availibilty of products due to the coronavirus (COVID-19) pandemic, some series are based on less than half of the number of quotes used in February 2020 (the most recent 'normal' collection). To identify which series are affected please consult the lastest Consumer price inflation tables which can be located here: https://www.ons.gov.uk/economy/inflationandpriceindices/datasets/consumerpriceinflation, which includes notation to reflect the reduced coverage.

1 As a direct result of the reduced availibilty of products due to the coronavirus (COVID-19) pandemic, some series are based on less than half of the number of quotes used in February 2020 (the most recent 'normal' collection). To identify which series are affected, please consult the latest Consumer price inflation tables which can be located here: https://www.ons.gov.uk/economy/inflationandpriceindices/datasets/ consumerpriceinflation, which includes notation to reflect the reduced coverage.

1 From the release of January consumer price inflation data on 16 February 2016, CPIH and CPI indices have been re-referenced and published with 2015=100. Full historic series for each of the re-referenced indices are available for users to view or download. Regular re-referencing of indices is methodological good practice as it avoids rounding issues that can arise from small index values. Please note that re-referencing does not impact on published inflation rates, although when using the indices to calculate inflation rates, it is important to use indices that are referenced on the same year. Re-referencing does not impact on RPI. For more information, please contact cpi@ons.gsi.gov.uk.

2 More detailed CPIH, CPI and RPI data are available at: http://www.ons.gov.uk.

Key: - zero or negligible

Source: Office for National Statistics

1 From the release of January consumer price inflation data on 16 February 2016, CPIH & CPI indices have been re-referenced and published with 2015=100. Full historic series for each of the re-referenced indices are available for users to view or download. Regular re-referencing of indices is methodological good practice as it avoids rounding issues that can arise from small index values. Please note that re-referencing does not impact on published inflation rates, although when using the indices to calculate inflation rates, it is important to use indices that are referenced on the same year. Re-referencing does not impact on RPI. For more information, please contact cpi@ons.gsi.gov.uk.

2 More detailed CPIH, CPI and RPI data are available at: http://www.ons.gsi.gov.uk.

E CPI: Detailed goods and services breakdown[1]

1 For further information on the composition of the indices shown, see '*The Consumer Prices Index: Goods and Services Indices and Special Aggregates*', which can be downloaded from: http://webarchive.nationalarchives.gov.uk/20160105160709/http://ons.gov.uk/

2 The coverage of this special aggregate has changed extensively since January 2000, when Social protection was first included and extentions to the Education and Health divisions also took effect. Health was further extended with effect from January 2001.

3 Energy includes electricity, gas and other fuels, and fuels and lubricants.

Key: - zero or negligible .. Not available

1 Published as the CPI in the UK.

2 Aggregate for European Union with 27 Member States.
Following user requests, on 10 April 2018 Eurostat began to publish in its database an aggregate for the EU with 27 Member States for around 50 most in-demand indicators, such as population, GDP growth rate and unemployment.

3 Data for the former EU28 aggregate.
For reference periods February 2020 or later, Eurostat no longer calculates or publishes the former EU 28 aggregate. This means that the final time periods for which the EU28 aggregate is published are January 2020, fourth quarter 2019 or the year 2019 depending on the frequency of the dataset. Eurostat will maintain historic data for EU28 in the database and will update as revisions are received.

4 The coverage of the Monetary Union Indices of Consumer Prices (MUICP) was extended to include Greece with effect from Jan 2001 and Slovakia from Jan 2009.

5 Following the end of the transition period, we have ceased to publish the Harmonised Index of Consumer Prices (HICP) international comparisons for EU countries in this table. The international comparisons will continue to be available on the Eurostat website. https://ec.europa.eu/eurostat/web/main/data/database

Key: - zero or negligible

1 An error was identified in the dataset underpinning the 2019 RPI weights covering the period February to June 2019. In line with the consumer price inflation statistics revision policy RPI was not revised. The corrected weights have been used for the July 2019 RPI onwards. Users should note there is a discontinuity between June's and July's index levels, which have been calculated using differing weights.

2 The Retail Prices Index and its derivatives do not meet the required standards for designation as National Statistics. A full report can be found at http://www.statisticsauthority.gov.uk.

3 As a direct result of the reduced availibilty of products due to the coronavirus (COVID-19) pandemic, some series are based on less than half of the number of price quotes used in Februrary 2020 (the most recent 'normal' collection). To identify which series are affected, please the latest Consumer price inflation tables which can be found here: https://www.ons.gov.uk/economy/inflationandpriceindices/datasets/consumerpr iceinflation, which includes notation to reflect the reduced coverage.

4 **Index date for October: 13 October 2026**

Key: - zero or negligible

1 All components of the RPI are included in the above breakdown with the exception of mortgage interest payments, council tax and depreciation.

2 Including fuel oil.

3 The 'other goods' category comprises DIY materials, coal & solid fuels, household goods, clothing & footwear, personal articles, chemists goods, purchase of motor vehicles and leisure goods.

4 The 'utilities' category comprises water, electricity, gas, postage, telephone charges and rail fares.

5 The 'shop services' category comprises catering, repairs & maintenance charges, domestic services, personal services, maintenance of motor vehicles, TV licence & rentals and entertainment & recreation charges.

6 The 'non-shop services' category comprises dwelling insurance & ground rent, fees and subscriptions, vehicle tax and insurance, bus & coach fares, other travel costs, foreign holidays and UK holidays.

7 The Retail Prices Index and its derivatives do not meet the required standards for designation as National Statistics. A full report can be found at: http//www.statisticsauthority.gov.uk/.

8 An error was identified in the dataset underpinning the 2019 RPI weights covering the period February to June 2019. In line with the consumer price inflation statistics revision policy RPI was not revised. The corrected weights have been used for the July 2019 RPI onwards. Users should note there is a discontinuity between June's and July's index levels, which have been calculated using differing weights.
